PREFACE . . . . .	xix
-------------------	-----

## CHAPTER 1

### Introduction

1.1 General remarks and a few definitions; basic motion and disturbed motion . . . . .	1
1.2 Flight as a controlled motion . . . . .	2
1.3 Inherent stability and stability of the control system . . . . .	3
1.4 State and control variables; the mathematical model of controlled flight . . . . .	4
1.5 Equations of disturbed motion: Generalities . . . . .	7
References . . . . .	9

## CHAPTER 2

### Mathematical Modeling of Disturbed Flight: Stability Equations

2.1 Longitudinal motion of aircraft . . . . .	10
2.2 Equations of lateral asymmetrical motion . . . . .	13
2.3 Nondimensional equations . . . . .	19
2.3.1 Introductory remarks . . . . .	19
2.3.2 Longitudinal disturbed motion . . . . .	21
2.3.3 Dimensionless equations of lateral asymmetrical disturbed motion . . . . .	25

Appendix: Definition of aircraft orientation by means of the Euler angles; Euler's equations . . . . .	27
References . . . . .	30

## **CHAPTER 3**

### **Generalities and Some Mathematical Aids**

3.1 The Liapunov stability: Short-duration disturbances . . . . .	31
3.2 Stability under persistent disturbances . . . . .	32
3.3 Some theoretical aspects of the relation between stability and control . . . . .	34
3.4 How to investigate stability . . . . .	36
3.4.1 Introductory remarks . . . . .	36
3.4.2 Stability by the first approximation . . . . .	37
3.4.3 Method of the Liapunov function . . . . .	38
3.4.4 Theorems of stability under persistent disturbances . . . . .	40
3.5 The necessity of numerical estimates; the concept of practical stability . . . . .	41
3.6 Estimating techniques . . . . .	43
3.6.1 Preliminary remarks . . . . .	43
3.6.2 Estimate of damping velocity of disturbances . . . . .	44
3.6.3 Estimate of additional terms: first procedure . . . . .	45
3.6.4 Estimate of additional terms: second procedure . . . . .	49
3.6.5 Estimate of allowable velocity of repeated vertical gusts for securing longitudinal stability with respect to the incidence . . . . .	51
3.7 Stability as a property over an unlimited interval of time . . . . .	59
3.8 Stability with respect to a part of the variables (incomplete stability) . . . . .	60
References . . . . .	66

## **CHAPTER 4**

### **Stability of Partially Controlled Motions**

4.1 Introductory considerations . . . . .	68
4.2 Mathematical statement of the problem of partially controlled motions . . . . .	69
4.3 Some comments . . . . .	74

4.4	Constrained stability according to Neumark . . . . .	79
	Appendix: Deduction of the system (4.7) . . . . .	84
	References . . . . .	86

## **CHAPTER 5**

### **Linear Systems with Constant Coefficients: Steady Basic Motions**

5.1	Introductory remarks . . . . .	87
5.2	Limits of validity for linear systems of equations with constant coefficients: quasilinear systems . . . . .	92
5.3	Stability region in space of the parameters. . . . .	93
5.4	Safe and dangerous zones of the stability boundary. . . . .	98
5.5	Empirical concept of neutral stability and its mathematical definition in the literature . . . . .	101
5.6	Mathematical models of neutral dynamic stability; Comments .	104
5.7	Some remarks on the selection of controls: qualitative aspects of the problem of control efficiency . . . . .	105
5.7.1	Introduction: efficiency of controls . . . . .	105
5.7.2	Time of response . . . . .	107
5.7.3	Secondary effects of controls . . . . .	115
Appendix I:	Criteria of Routh and Hurwitz . . . . .	118
Appendix II:	Example to illustrate the notions of safe and dangerous boundary . . . . .	120
References	. . . . .	122

## **CHAPTER 6**

### **Longitudinal Stability of Steady Straight Flight**

6.1	Stability with locked controls . . . . .	124
6.2	Stability of partially controlled longitudinal motion . . . . .	130
6.2.1	Partial control through longitudinal attitude constraint .	130
6.2.2	Case of simultaneous constraint of the angle and angular velocity of pitch . . . . .	131
6.2.3	Simultaneous control of longitudinal attitude and flight speed. . . . .	132
6.2.4	Constraint of flight speed . . . . .	133
6.3	A neutrally stable model for certain longitudinal motions .	134
6.4	Effect of perturbation of height on the longitudinal stability characteristics in steady level flight . . . . .	141
References	. . . . .	154

## **CHAPTER 7**

### **Lateral Stability of Steady Regime Flight**

7.1	Stability with locked controls . . . . .	155
7.2	Lateral stability in partial control conditions . . . . .	158
7.2.1	Constraint of the angle of yaw . . . . .	158
7.2.2	Simultaneous control of both the yaw and the bank angles	162
7.2.3	Yaw and sideslip angles under constraint . . . . .	165
7.2.4	Constraint of the rotation in yaw . . . . .	166
7.2.5	Rapid convergence in pure roll . . . . .	169
7.2.6	Oscillation in the <i>Oxy</i> plane (yaw and sideslip) . . . . .	170
7.3	Coupled motions; A particular case: hovering flight stability of VTOL aircraft . . . . .	172
7.3.1	Coupling of longitudinal and lateral motions . . . . .	172
7.3.2	Equations of disturbed motion . . . . .	173
7.3.3	Effect of rotation dampers . . . . .	175
7.3.4	Simultaneous use of rotation dampers and static stabilizers	177
	References . . . . .	181

## **CHAPTER 8**

### **Stability of Unsteady Motion: Nonautonomous Systems**

8.1	Introduction . . . . .	183
8.2	Cases reducible to linear systems with constant coefficients . . . . .	186
8.2.1	Small variation of the system parameters . . . . .	186
8.2.2	Slow variation of the system parameters: the process of the “freezing of coefficients” . . . . .	187
8.3	Direct investigation of unsteady motion stability . . . . .	189
	References . . . . .	191

## **CHAPTER 9**

### **Stability of Unsteady Flight: Varying Undisturbed Velocity**

9.1	Rapid incidence adjustment . . . . .	192
9.1.1	Assumptions and simplified equations of disturbed motion	192
9.1.2	Sufficient conditions of applicability for the classical model	194
9.1.3	Direct approach via the Liapunov function method . . . . .	200
9.1.4	Comments . . . . .	205

9.2	Estimates of varying speed effect . . . . .	210
9.2.1	Damping velocity of incidence deviation . . . . .	210
9.2.2	Influence of flight speed variation on frequency of phugoid oscillations . . . . .	214
References . . . . .		218

## **CHAPTER 10**

### **Stability of Unsteady Flight: Varying Undisturbed Height**

10.1	Introduction: undisturbed height as a time-dependent parameter of the system . . . . .	219
10.2	Equations to be considered . . . . .	220
10.3	Rapid incidence adjustment . . . . .	223
10.4	Influence of undisturbed flight height variation on phugoid motion . . . . .	226

## **CHAPTER 11**

### **Effect of Time Lag on the Stability of Controlled Flight**

11.1	The mathematical model . . . . .	230
11.1.1	Closed-loop systems with time lag . . . . .	230
11.1.2	Ideal controls and controls with time lag . . . . .	231
11.1.3	Equation system with time lag . . . . .	232
11.1.4	Stability of solution . . . . .	233
11.1.5	A relation between the stability of an ideally controlled motion and that of a motion controlled with time lag . . . . .	234
11.2	Artificial stabilization of longitudinal motion allowing for small time-lags; validity limits of the ideal control model; estimates . . . . .	235
11.2.1	Mathematical aids: lemmata concerning differential inequalities with time lag . . . . .	235
11.2.2	Removal of phugoid divergence through ideal controls in the case of a steady basic motion . . . . .	236
11.2.3	Estimation of the validity of condition (11.11) . . . . .	237
11.2.4	Estimation based on the method of the variation of parameters . . . . .	238
11.2.5	An estimate based on the method of the Liapunov function . . . . .	243
11.2.6	The case of unsteady basic motion . . . . .	244
11.3	Artificial stabilization of longitudinal motion in the case of arbitrary time lag . . . . .	246

11.3.1	Mathematical aids . . . . .	246
11.3.2	The case of stationary and quasi-stationary basic motions (autonomous systems) . . . . .	249
11.3.3	Note concerning nonautonomous systems . . . . .	250
11.4	Hovering flight of VTOL aircraft. . . . .	251
	References . . . . .	253

## **CHAPTER 12**

### **Optimization Problems**

12.1	Introduction . . . . .	255
12.1.1	Object . . . . .	255
12.1.2	Problem formulation: the physical model . . . . .	256
12.2	The mathematical model. . . . .	257
12.2.1	State variables and control variables; assumption of piecewise continuity of control variables . . . . .	257
12.2.2	Control variables . . . . .	258
12.2.3	Constraints; admissible controls . . . . .	260
12.2.4	Proposed objective (purpose of the flight mission) . .	261
12.2.5	Performance index. . . . .	262
12.2.6	Mathematical formulation of the optimum problem . .	262
12.3	Maximum principle . . . . .	263
12.3.1	The Pontryagin theorem . . . . .	263
12.3.2	Comments . . . . .	264
12.3.3	Switching conditions . . . . .	266
12.4	Optimal programming of the basic controls in climb and accelerated flight . . . . .	267
12.4.1	Introduction . . . . .	267
12.4.2	Technical problem formulation; assumptions . . . . .	268
12.5	VTOL aircraft with adjustable orientation of thrust vector . .	270
12.5.1	Equations of motion . . . . .	270
12.5.2	A simplified case: the constant attitude . . . . .	272
12.5.3	Variable longitudinal attitude . . . . .	280
12.6	Orientation of the thrust force fixed against the machine . .	283
12.6.1	Equations of longitudinal motion . . . . .	283
12.6.2	Optimal climb and acceleration by thrust and longitudinal moment control . . . . .	284
12.6.3	Minimum time to climb and accelerate by control of the incidence . . . . .	285
12.6.4	Climb and acceleration in minimum time by path inclina- tion control . . . . .	288

12.7	State variable constraint. . . . .	290
12.8	Optimal stabilization: general . . . . .	293
12.8.1	Introduction . . . . .	293
12.8.2	Statement of the Kalman-Letov problem . . . . .	295
12.9	Hovering flight of VTOL aircraft. . . . .	295
12.9.1	Linear models . . . . .	295
12.9.2	Dynamic programming approach: partially controlled hovering VTOL aircraft modeled as a rigid body with fixed point: A nonlinear model . . . . .	299
12.10	Optimal stabilization of longitudinal attitude in the phugoid phase	302
12.11	Some conclusions . . . . .	303
Appendix I. Computational aspects . . . . .		304
Appendix II. Deduction of certain formulas . . . . .		310
References . . . . .		312
NOTATION . . . . .		313
AUTHOR INDEX . . . . .		317
SUBJECT INDEX . . . . .		319
