

TABLE OF CONTENTS

CHAPTER

I	<u>INTRODUCTION</u> by Paolo Bisogno and Augusto Forti	1
II	<u>THE STATE OF FUTURES RESEARCH</u> The role of futures research in societal modelling, by Olaf Helmer	9
	The present state of futures research in the Soviet Union, by N.N. Moiseev	14
III	<u>PLANNING OF SYSTEMS</u> A system of models for central planning, by K.A. Bagrinovsky	21
	A "non-paternalistic" attitude in using models of social organizations, by Yona Friedman	31
	Mathematical models in the design and operation of public transport systems, by Robert Faure	41
IV	<u>SIMULATION MODELLING AND GAME THEORY</u> Mathematical modelling of some social and environmental problems, by Denos C. Gazis	52
	Dynamic systems modelling, by Dennis L. Meadows	60
	The dynamics of global equilibrium, by Dennis L. Meadows	78
	System simulation to test environmental policy: A sample study of DDT movement in the environment, by Jørgen Randers and Dennis L. Meadows	96
	A dynamic simulation model of the urban development of Venice, by P. Costa and U. Piasentin	144
	Some aspects of socio-economic modelling, by Martin Shubik	155
	Imitation models of historical processes, by Y.N. Pavlovsky	164

V COMPUTERS AND METHODOLOGY FOR MODELLING

A computer method of analysing the structure of behavioural models, by M.G. Kendall	170
Information systems and computer systems, by J. Barraud	178
Mathematical modelling of cybernetic systems, by N. Teodorescu	182
"Soft models", hard data, and social reality, by Alvin Toffler	195
Principles of simulation: hierarchical control systems, by N.N. Moiseev	205

VI HUMAN INTERACTION ON MODELLING

Delphi research: Experiments and prospects, by Norman C. Dalkey	228
Algorithms for assessing the quality of expert data, by Y.I. Zhuravlev	238
Applications of futures research to society's problems, by Selwyn Enzer	243
<u>CONCLUSION</u>	288
