

Contents

1	INTRODUCTION	1
	Design and Analysis	1
	Types of Structural Supports	1
	Equations of Equilibrium	4
	Free-Body Diagram	5
	Internal Reactions in Structures	5
	Compatibility of Forces and Deformations	7
	Classification of Structures	9
	Small Deformations Theory	16
	Sign Convention	17
	Exercise	18
2	BASIC PRINCIPLES IN STRUCTURAL ANALYSIS	20
	Hooke's Law and the Principle of Superposition	20
	Betti's Law	21
	Maxwell's Law of Reciprocal Deflections	23
	Strain Energy	24
	The Principle of Virtual Work	27
	Castigliano's Theorem	38
	Moment-Area Theorems	45
	The Conjugate Beam Principle	49
	Exercise	54
3	THE METHOD OF CONSISTENT DEFORMATIONS	56
	Introduction	56
	The Method of Consistent Deformations	57
	Remarks on the Method of Consistent Deformations	82
	Exercise	82
4	THE SLOPE-DEFLECTION METHOD	87
	Introduction	87
	The Slope-Deflection Equation	88
	Slope-Deflection Equations applied to Continuous Beams with no Support-Settlement	90
	Slope-Deflection Equations applied to Continuous Beams with Support-Settlements	97
	Slope-Deflection Method applied to Frames	104
	Exercise	125

5	THE MOMENT DISTRIBUTION METHOD	129
	Introduction 129	
	Fixed End Moments 129	
	Rotational Stiffness and Carry-over Factor 130	
	Lateral Stiffness 132	
	Distribution Factor 134	
	Moment Distribution applied to Beam-Analysis 135	
	An Improved Scheme of Calculations 140	
	Simplified Treatment of a Hinge 141	
	Moment Distribution applied to Frames 149	
	Cantilever Moment Distribution 178	
	Exercise 191	
6	KANI'S METHOD	198
	Introduction 198	
	Fundamental Equations of Kani's Method 199	
	Exercise 243	
7	THE DISTRIBUTION OF DEFORMATION METHOD	247
	Introduction 247	
	Frames without Side-Sway 248	
	Frames with Side-Sway 267	
	The Substitute Cantilever Method 279	
	Exercise 290	
8	THE METHOD OF COLUMN ANALOGY	294
	Introduction 294	
	The Column Analogy 294	
	The Sign Convention 299	
	The Column Analogy Method 299	
	Stiffness and Carry-over Factors by the Column Analogy 309	
	Frame Analysis by the Column Analogy Method 312	
	The Elastic Centre 328	
	Exercise 334	
9	INFLUENCE LINES FOR INDETERMINATE STRUCTURES	337
	Moving Loads and Influence Lines 337	
	Influence Lines for Determinate Structures 338	
	Influence Lines for Indeterminate Structures 350	
	Muller-Breslau Principle 350	
	Quantitative Determination of Influence Lines 354	
	Exercise 383	
	APPENDIX A Gauss-Seidel Iteration	385
	APPENDIX B Columns with Hinged Bases; Kani's Method	387
	INDEX	391
