

## TABLE OF CONTENTS

Editorial preface	v
-------------------	---

### *Part 1. Mathematical theories of portfolio allocation*

J.H. Drèze: A tâtonnement process for investment under uncertainty in private ownership economies	3
H.E. Leland: On turnpike portfolios	24
D. Levhari: Optimal savings and portfolio choice under certainty	34
G. Pye: Lifetime portfolio selection with age dependent risk aversion	49
K. Shell: Selected elementary topics in the theory of economic decision-making under uncertainty	65
J. Stiglitz: Portfolio allocation with many risk assets:	
1. Portfolio separation theorems	76
2. Alternative characterization of portfolios	89
3. The term structure of interest rates	99
4. Comparison with the multi-commodities approach	109

### *Part 2. Some mathematical models in finance*

O. Castellino: On the correlation between yields and coupon rates of randomly redeemable bonds	129
G. Castellani: A mathematical model on the selection of investments in conditions of risk	145
J. Jaskold-Gabszewicz and J.P. Vial: Optimal capacity expansion under growing demand and technological progress	159
S.-C. Kolm: External liquidity – a study in monetary welfare economics	190
H.P. Minsky: An exposition of a Keynesian theory of investment	207
K. Shell: Financial instruments in the dynamic theory of aggregate investment allocation	234
J.P. Vial: A continuous time model for the cash balance problem	244

*Part 3. Applied portfolio theories*

M. Gaviano, C. Sutti and G.P. Szegő: Remarks on the market index to which the share prices are most linearly correlated	295
M.C. Jensen: Optimal utilization of market forecasts and the evaluation of investment performance	310
H.A. Latané: An optimum growth portfolio selection model	336
J.J. Nagorniak: The application of the capital asset pricing model to debt and equity markets	344
J. Treynor and F. Black: Portfolio selection using special information, under the assumption of the diagonal model, with mean-variance portfolio objectives, and without constraints	367

*Part 4. Optimal bank portfolio selection*

K.J. Cohen and F.S. Hammer: Linear programming models for dynamic balance sheet management	387
V. Lisanti: Economic model of a bank with savings and loans operations	414
M. Monti: Deposit, credit and interest rate determination under alternative bank objective functions	430
J.L. Pierce: The theory and measurement of bank portfolio selection	455

*Part 5. Forecasting models*

C.W.J. Granger: Empirical studies of capital markets: A survey	469
C.P. Tsokos: Forecasting models from non-stationary time series: Short-term predictability of stocks	520

*Part 6. Application of stochastic models*

R.A. Brealey and S.D. Hodges: The valuation of British convertibles	567
S.D. Hodges and R.A. Brealey: An empirical analysis of the diagonal model	599
M. Kantor: On market indexes	620
N.A. Niarchos: The stock market in Greece	633
A.H. Russell: The city university, F.T. actuaries, data bank of daily share prices	638
Author index	655
Subject index	660
