

## CONTENTS

1.	MATHEMATICS IN ECONOMICS AND MANAGEMENT	1
1.1	Is Mathematics Useful in Economics and Management?	1
1.2	The Role of Mathematics in the Academic Study of Economics and Management	2
1.3	The Role of Mathematics in the Practice of Business and Economics	4
1.4	The Organization of This Book	6
2.	FUNCTIONS IN THE WORLD OF AFFAIRS	7
2.1	Functions in Economic Theory	7
2.2	Demand Functions	7
2.3	Cost Functions	17
2.4	The Profit Function	21
2.5	Functions in the World of Affairs	22
3.	QUALITY INSPECTION	31
3.1	Threads and Spools	31
3.2	Inspecting Spools	32
3.3	Designing an Inspection Plan	45
3.4	Average Outgoing Quality	55
3.5	Quality Inspection	59
4.	GEOMETRY AND ECONOMIC REASONING	63
4.1	The Role of Geometry in Economic Analysis	63
4.2	Demand, Supply, and Price	64
4.3	National Income and the Multiplier	81

4.4	Multiproduct Production	86
4.5	Geometry and Economic Reasoning	92
5.	DEVELOPING MARKET DEMAND AND SUPPLY FUNCTIONS	97
5.1	Combining Demand and Supply Decisions of Individuals	97
5.2	Combining Individual Demand Curves	98
5.3	Combining Individual Supply Curves	104
5.4	Developing Market Demand and Supply Functions	110
6.	STOCKS AND BONDS	113
6.1	Capital and Its Acquisition	113
6.2	The Concept of Present Value	114
6.3	Bond Prices	115
6.4	Stock Prices	128
7.	MARGINAL ANALYSIS	140
7.1	The Concept of the Margin in Economic Analysis	140
7.2	Marginal Analysis in the Theory of the Firm	140
7.3	Marginal Analysis and Investment	159
7.4	Marginal Analysis and the Derivative	165
8.	EQUILIBRIUM	168
8.1	Two Important Questions of Policy	168
8.2	Market Equilibrium in a Static World: A Problem in Ecology	170
8.3	Market Equilibrium in a Dynamic World	189
8.4	Equilibrium, Convergence, and the Real World	197

9.	OPTIMAL INVENTORY	201
9.1	Building a Retail Distribution Warehouse	201
9.2	Costs in Inventory Problems	202
9.3	Minimizing Total Inventory Costs	206
9.4	The Warehouse Again	217
10.	CAPITAL BUDGETING	222
10.1	Capital Budgeting Again	222
10.2	Evaluating the Rate of Return on a Project	225
10.3	An Analytical Convenience	242
10.4	Mathematics and Capital Budgeting	249
11.	PROBLEMS IN MACROECONOMICS	252
11.1	Some Concepts of Macroeconomics	252
11.2	The Consumption Function	255
11.3	Income Determination: A Simple Model	258
11.4	Income Determination: Government and Taxes	262
11.5	What Was Left Out?	272
12.	MORE ON BEHAVIOR OF THE FIRM	276
12.1	The Firm	276
12.2	Production Process	277
12.3	The Cost-Output Function	291
12.4	Decision on Output	295
13.	ECONOMIC GROWTH AND CHANGE	306
13.1	The Acceleration Principle	306
13.2	Income Determination by the Interaction of Accelerator and Multiplier	307
13.3	Forecast Errors and Income	314

13.4	Cycles in Income	321
13.5	Differential Equations in Economics	330
14.	COMMON STOCKS AND THE ROLE OF THE STOCK MARKET	334
14.1	The Valuation of Common Stock	334
14.2	Dividends and Dividend Growth	336
14.3	Models for Stock Valuation	340
14.4	The Role of the Stock Market	356
15.	DECISIONS UNDER UNCERTAINTY: (1) BASIC CONCEPTS	361
15.1	Uncertainty and Probability	361
15.2	Decisions and Utility	363
15.3	Choice Between Risky Alternatives	371
15.4	The Value of Information	376
15.5	Decisions Under Uncertainty	383
16.	DECISIONS UNDER UNCERTAINTY: (2) ADVANCED APPLICATIONS	386
16.1	An Analytical Approach to Inventory Problems	387
16.2	An Analytical Approach to Comparing Risky Alternatives	396
16.3	Dynamic Decision Problems	398
16.4	Dynamic Programming and the Optimal Solution	405
16.5	Postscript	415
17.	FIRMS WITH TWO PRODUCTS	419
17.1	A More Realistic Firm	419
17.2	Competitive and Complementary Demand Relationships	420
17.3	Economies and Diseconomies in Cost	424

17.4	Optimal Output in a Two-Product Firm	426
17.5	Multiproduct Firms	439
18.	MORE ON MULTIPRODUCT FIRMS: LINEAR PROGRAMMING	442
18.1	Formulation of the Problem and Properties of the Solution	442
18.2	Finding Corner Points	448
18.3	Linear Programming Technique	467
18.4	Linear Programming in Practice	485
	INDEX	488
