

# Contents

<b>1</b>	<b>Introduction</b> . . . . .	<b>1</b>
1.1	Multivariable Processes . . . . .	2
1.2	Control of Multivariable Processes . . . . .	3
1.3	Outline of the Book Chapters . . . . .	6
<b>2</b>	<b>Loop Pairing Analysis</b> . . . . .	<b>9</b>
2.1	Introduction . . . . .	9
2.2	Preliminaries . . . . .	11
2.2.1	RGA and NI . . . . .	11
2.2.2	RGA-Based Loop-Pairing Criterion . . . . .	13
2.2.3	DCLI . . . . .	15
2.3	Decomposed Interaction Analysis . . . . .	16
2.4	Control Structure Selection . . . . .	21
2.4.1	New Loop-Pairing Criterion . . . . .	22
2.4.2	Case Study . . . . .	24
2.5	DRIS . . . . .	26
2.6	Tolerance to Loops Failures . . . . .	31
2.7	DCLI Evaluation for Loop Pairings . . . . .	33
2.7.1	Algorithm . . . . .	33
2.7.2	Case Study . . . . .	34
2.8	Conclusion . . . . .	38
<b>3</b>	<b>Loop Gain Margins and Stabilizing PID Ranges</b> . . . . .	<b>39</b>
3.1	Introduction . . . . .	39
3.2	Problem Formulation . . . . .	41
3.3	The Proposed Approach . . . . .	46
3.4	Special Cases . . . . .	50
3.4.1	P Control . . . . .	50
3.4.2	PD Control . . . . .	51
3.4.3	PI Control . . . . .	52
3.5	Computational Algorithm . . . . .	53
3.6	An Example . . . . .	59

3.7	Extension to the Centralized Controller .....	64
3.8	Conclusions .....	69
<b>4</b>	<b>Loop Phase Margins .....</b>	<b>71</b>
4.1	Introduction .....	71
4.2	Problem Formulation .....	73
4.3	Time Domain Method .....	78
4.3.1	Finding Allowable Diagonal Delays .....	78
4.3.2	Evaluating Phase Margins .....	82
4.3.3	An Example .....	84
4.4	Frequency Domain Method .....	85
4.4.1	The Proposed Approach .....	85
4.4.2	Illustration Examples .....	89
4.5	Conclusion .....	94
<b>5</b>	<b>Multi-loop PID Control Based on dRI Analysis .....</b>	<b>97</b>
5.1	Introduction .....	97
5.2	Preliminaries .....	99
5.3	Dynamic Relative Interaction .....	101
5.4	SIMC Based Design .....	104
5.4.1	Determination of MMF .....	104
5.4.2	Design of a Decentralized Controller .....	107
5.4.3	Examples .....	108
5.5	IMC Based Design .....	116
5.5.1	Estimation of Equivalent Transfer Function .....	116
5.5.2	Design of a Decentralized Controller .....	119
5.5.3	Simulation Examples .....	120
5.6	Conclusion .....	130
<b>6</b>	<b>Multivariable PID Control Based on Dominant Pole Placement .....</b>	<b>131</b>
6.1	Introduction .....	131
6.2	Approximate Dominant Pole Placement .....	134
6.2.1	Problem Statement .....	134
6.2.2	The Proposed Method .....	135
6.2.3	Simulation Study .....	137
6.2.4	Real Time Testing .....	143
6.2.5	Positive PID Settings .....	144
6.2.6	Oscillation Processes .....	146
6.3	Guaranteed Dominant Pole Placement .....	151
6.3.1	Problem Statement and Preliminary .....	151
6.3.2	Root Locus Method .....	153
6.3.3	Nyquist Plot Method .....	154
6.4	Multivariable Case .....	158
6.5	Conclusion .....	167

<b>7</b>	<b>Optimal Multivariable PID Control Based on LMI Approach</b> .....	167
7.1	Introduction .....	167
7.2	Transformation from PID Controllers to SOF Controllers .....	168
7.2.1	Transformation .....	168
7.2.2	Well-Posedness of PID Control .....	170
7.3	Feedback Stabilization with PID Controllers .....	171
7.3.1	Static Output Feedback Stabilization — Some Results Revisited .....	171
7.3.2	Feedback Stabilization with PID Controllers .....	173
7.4	$H_2$ Suboptimal Control with PID Controllers .....	173
7.5	$H_\infty$ Suboptimal Control with PID Controllers .....	176
7.6	Maximum Output Control with PID Controllers .....	177
7.7	A Numerical Example: Design of Aircraft Controllers .....	180
7.8	Improvement of Convergence in Static Output Feedback .....	182
7.8.1	SOF Stabilization .....	182
7.8.2	$H_\infty$ Synthesis .....	186
7.8.3	PID Control .....	189
7.9	Improvement by Descriptor Systems Approach .....	190
7.9.1	Stabilization Via PID Control .....	192
7.9.2	Robust Stabilization with $H_\infty$ Performance .....	196
7.10	Conclusions .....	201
<b>8</b>	<b>Multivariable PID Control for Synchronization</b> .....	203
8.1	Introduction .....	203
8.2	Problem Formulation .....	204
8.3	A Strategy for Master-Slave Synchronization .....	205
8.3.1	PD Control .....	205
8.3.2	PID Control .....	210
8.4	Examples .....	213
8.5	Conclusion .....	217
<b>9</b>	<b>Multivariable Process Identification</b> .....	219
9.1	Introduction .....	219
9.2	Identification of SISO Processes .....	221
9.2.1	Second-Order Modelling .....	221
9.2.2	$n$ -th Order Modeling .....	228
9.3	Identification of MIMO Processes .....	230
9.3.1	TITO Processes .....	230
9.3.2	Simulation Studies .....	235
9.3.3	General MIMO Processes .....	242
9.3.4	Real Time Testing .....	246
9.4	Conclusion .....	248
	<b>Index</b> .....	249
