TABLE OF CONTENTS

PREFACE v

CHAPTER I. STATISTICAL MODELS 1
§1. States and measurements 1
§2. Some facts about convex sets 6
§3. Definition of a statistical model 14
§4. The classical statistical model 15
§5. Reduction of statistical model. Classical model with a restricted class of measurements 20
§6. The statistical model of quantum mechanics 27
§7. On the problem of 'hidden variables' 33
§8. Comments 38

CHAPTER II. MATHEMATICS OF QUANTUM THEORY 43
§1. Operators in a Hilbert space 43
§2. Quantum states and measurements 50
§3. Spectral representation of bounded operators 52
§4. Spectral representation of unbounded operators . . . 57
§5. On realization of measurement 64
§6. Uncertainty relations and compatibility 68
§7. Trace-class operators and Hilbert–Schmidt operators . 73
§8. $\mathscr{L}^2$ spaces associated with a quantum state 81
§9. Uncertainty relations for measurements with finite second moments 87
§10. Matrix representation of square-summable operators. The commutation operator of a state 90
§11. Comments 95

CHAPTER III. SYMMETRY GROUPS IN QUANTUM MECHANICS . 99
§1. Statistical model and Galilean relativity 99
§2. One-parameter shift groups and uncertainty relations . 104

§3. Kinematics of a quantum particle in one dimension . . 109
§4. Uniqueness theorem. The Schrödinger and the momentum representations 114
§5. Minimum-uncertainty states. The completeness relation 117
§6. Joint measurements of coordinate and velocity . . . 120
§7. Dynamics of a quantum particle in one dimension . . 126
§8. Time observable. The 'time–energy' uncertainty relation 130
§9. Quantum oscillator and phase measurement 137
§10. The coherent-state representation 143
§11. Representation of the rotation group and angular momenta 148
§12. Measuring the angle of rotation 154
§13. Comments 159

CHAPTER IV. COVARIANT MEASUREMENTS AND OPTIMALITY . . 163
§1. Parametric symmetry groups and covariant measurements 163
§2. Structure of covariant measurements 166
§3. The covariant quantum estimation problem 169
§4. Measurements of angular parameters 174
§5. Uncertainty relations for angular quantities 179
§6. Covariant measurements of angular parameter in the case of arbitrary representation of the group T 183
§7. Covariant measurements of a shift parameter 188
§8. The case of irreducible representation 197
§9. Estimation of pure state 203
§10. Measuring parameters of orientation 208
§11. Comments 212

CHAPTER V. GAUSSIAN STATES 215
§1. Quasiclassical states of the quantum oscillator 215
§2. The CCR for many degrees of freedom 219
§3. Proof of the Stone–von Neumann uniqueness theorem. The Weyl transform 223
§4. Characteristic function and moments of state 231
§5. Structure of general Gaussian states 239
§6. A characteristic property of Gaussian states 245
§7. Comments 250

CHAPTER VI. UNBIASED MEASUREMENTS 253
§1. Quantum communication channel 253
§2. A lower bound for the variance in one-dimensional case 256

§3. The case of shift parameter 261
§4. Estimation of force by measurements over a trial object 268
§5. A bound for measurement covariance matrix based on symmetric logarithmic derivatives 274
§6. A bound based on right logarithmic derivatives . . . 278
§7. A general bound for the total mean-square deviation . 285
§8. Linear measurements 292
§9. Mean-value estimation for Gaussian states 298
§10. Comments 302
