

TABLE OF CONTENTS

PREFACE	v
CHAPTER I. DEFINITIONS, METHODS AND RESULTS	
1.1-1.6 Dependence on geometric form	
1.1 Space and plane	1
1.2 Space	1
1.3 Plane	1
1.4 Radii of a solid	3
1.5 Radii of a plane domain	4
1.6 Dependence on shape, size, and relative location	4
1.7-1.10 Symmetrization	
1.7 Space	5
1.8 Plane	5
1.9 Example	5
1.10 Theorem on symmetrization	6
1.11-1.23 Inequalities	
1.11 The role of inequalities	7
1.12 Inequalities derived from symmetrization	7
1.13 Convex solids	8
1.14 Solids of revolution	9
1.15 Plane domains	10
1.16 Further inequalities	10
1.17 An approximate formula due to de Saint- Venant	11
1.18 Capacity and surface area	11
1.19 Other examples	12
1.20 Other data	13
1.21 Table	15
1.22 An application	20
1.23 Comments	22
1.24-1.30 Methods based on a minimum property	
1.24 Analogy	23
1.25 Capacity	23
1.26 Torsional rigidity	24
1.27 Principal frequency	24
1.28 Twofold characterization	25
1.29 The choice of level surfaces	25
1.30 The principles of Dirichlet and Thomson	26

1.31-1.35	Expansions and variational methods	
1.31	Expansions	28
1.32	Nearly circular curves and nearly spherical surfaces	29
1.33	Variational formulas in polar coordinates. Table.	30
1.34	Variational formulas in tangential coordinates	34
1.35	A necessary condition	35
1.36-1.38	Further results and remarks	
1.36	Ellipsoid	37
1.37	Lens	39
1.38	Survey of the following chapters	41
CHAPTER II. THE PRINCIPLES OF DIRICHLET AND THOMSON		
2.1	Capacity, Energy	42
2.2	Formulation of the principles	43
2.3	Two-dimensional case	44
2.4	Proof of the principle of Dirichlet	45
2.5	Dirichlet's principle with prescribed level surfaces	45
2.6	Proof of the principle of Thomson	47
2.7	Thomson's principle with prescribed lines of force	48
2.7A	Conductance	49
2.8	The principle of Gauss	55
2.9	A method of approximation	57
2.10	The two-dimensional case	60
2.11	A remark on discrete masses	60
2.12	Another way of estimating capacities	61
CHAPTER III. APPLICATIONS OF THE PRINCIPLES OF DIRICHLET AND THOMSON TO ESTIMATION OF CAPACITY		
3.1	Introduction	53
3.2	The inequality $C \geq \bar{V}$	53
3.3	Mean-values of the radii of a solid	65
3.4	Parallel surfaces	66
3.5	Similar surfaces	68
3.6	Surfaces of revolution	71
3.7	An inequality between C and \bar{F}	73
3.8	On the capacity of a cube.	76
3.9	On the capacity of a square	78
CHAPTER IV. CIRCULAR PLATE CONDENSER		
4.1	Problem	79
4.2	Lower bound for the capacity of a circular plate condenser	79
4.3	Generalization	81
4.4	Another characterization of the capacity	83
4.5	Generalization	85
CHAPTER V. TORSIONAL RIGIDITY AND PRINCIPAL FREQUENCY		
5.1-5.9	Consequences of the variational definition	
5.1	Characterization by a minimum property	87
5.2	Equivalence of the two definitions for the torsional rigidity	88
5.3	Equivalence of the two definitions for the principal frequency	89

5.4	An inequality connecting P , Δ and A .	91
5.5	Similar level lines. Estimate for P	91
5.6	Similar level lines. Estimate for Δ	94
5.7	Conformal mapping. Estimate for P .	94
5.8	Conformal mapping. Estimate for Δ	97
5.9	Examples and comments	98
5.9A	Prescribed level lines. Estimate for P	100
5.9B	A direct relation between torsional rigidity and the vibrations of a membrane	105
5.10-5.11	Applications of the inclusion lemma	
5.10	The inclusion lemma	109
5.11	Applications	111
5.12-5.19	Applications of conformal mapping	
5.12	An assumption	113
5.13	The boundary value problem of torsion	113
5.14	Expressions for the torsional rigidity	116
5.15	Expansions of the polar moment of inertia	117
5.16	Expansions of the torsional rigidity	119
5.17	Second proof of de Saint Venant's theorem	121
5.18	Relaxing the assumption	123
5.19	Another expansion of the polar moment of inertia	123
CHAPTER VI. NEARLY CIRCULAR AND NEARLY SPHERICAL DOMAINS		
6.1	Notation	127
6.2	Moment of inertia	127
6.3	Outer and inner radius	128
6.4	Torsional rigidity	131
6.5	Principal frequency of a nearly circular membrane	132
6.6	The clamped plate	134
6.6A	Buckling of a plate	137
6.6B	Biharmonic radii	140
6.6C	Biharmonic radii of a nearly circular curve	141
6.6D	Comparison with other radii	144
6.7	Tangential coordinates	146
6.8	Capacity	147
6.9	Inner radius with respect to the centroid	148
6.10	Volume, surface-area and Minkowski's constant	149
6.11	Mean values of the radii of a solid .	149
6.12	Discussion of another inequality . .	150
CHAPTER VII. ON SYMMETRIZATION		
7.1	Another definition of symmetrization	151
7.2	On moments of inertia	152
7.3	A generalization of the theorem on symmetrization	153
7.4	Simple cases	157
7.5	On the inner radius of convex curves	161
7.6	On the surface radius of convex solids	164

7.7	On the shape of equipotential surfaces	165
7.8	On the second proper frequency of a vibrating membrane	167
7.9	On the integral of mean curvature	168
7.10	On spherical symmetrization	170
CHAPTER VIII. ON ELLIPSOID AND LENS		
8.1	On the expansion of functions depending on the shape of an ellipsoid	171
8.2	An approximation to the capacity of the ellipsoid	173
8.3	Another approximation to the capacity of the ellipsoid	175
8.4	On the capacity of a lens. The case of two contacting spheres	178
8.5	Capacity and outer radius for two spheres in contact	179
8.6	Capacity and surface radius for two spheres in contact	181
NOTE A. SURFACE-AREA AND DIRICHLET'S INTEGRAL		
A 1	Steiner symmetrization of the surface-area	182
A 2	Steiner symmetrization of a function	184
A 3	Transition from the surface-area to Dirichlet's integral	185
A 4	Applications	186
A 5	Schwarz symmetrization of the surface-area	189
A 6	Applications	191
A 7	Circular symmetrization of the surface-area	193
A 8	Applications	195
NOTE B. ON CONTINUOUS SYMMETRIZATION		
B 1	Problem	200
B 2	Continuous symmetrization in a plane	200
B 3	Continuous symmetrization in space	202
B 4	Capacity	202
B 5	Example	203
B 6	Polar moment of inertia	204
NOTE C. ON SPHERICAL SYMMETRIZATION		
C 1	Definition	205
C 2	A theorem on capacity	205
C 3	Preparations for the proof	206
C 4	First part of the proof	207
C 5	Second part of the proof	209
NOTE D. ON A GENERALIZATION OF DIRICHLET'S INTEGRAL		
D 1-D 8	211
NOTE E. HEAT-CONDUCTION ON A SURFACE		
E 1	Problem	217
E 2	Green's formula	218
E 3	Lower bound for c	219
E 4	Plane domain	220

E 5	Spherical domain	220
E 6	Cylindrical domain	221
E 7	Application to the conductance of a plane domain	222
E 8	Analytic formulation	223
E 9	Inner and outer radius	225
E 10	Comparison	226

NOTE F. ON MEMBRANES AND PLATES

F 1	Definitions	230
F 2	Results	231
F 3	A hypothesis	232
F 4	Membrane with fixed boundary	232
F 5	Clamped plate	235
F 6	Buckling of a plate	237

NOTE G. VIRTUAL MASS AND POLARIZATION

G 1	Definitions	239
G 2	Problems and results	241
G 3	Further results	243
G 4	Two-dimensional (cylindrical) problems	243

TABLES FOR SOME SET-FUNCTIONS OF PLANE DOMAINS 247

Circle	251
Ellipse	251
Narrow ellipse	252
Square	252
Rectangle	253
Narrow rectangle	254
Semicircle	254
Sector	255
Narrow sector	256
Equilateral triangle	256
Triangle $45^\circ, 45^\circ, 90^\circ$	257
Triangle $30^\circ, 60^\circ, 90^\circ$	258
Regular hexagon	258
$\bar{r} A^{-1/2}$	259
$\bar{r} A^{-1/2}$	260
$\bar{r} L^{-1}$	260
PA^{-2}	261
$PA^{-2}B$	262
$PA^{-4}I$	263
Pr^{-4}	264
$\Lambda A^{1/2}$	265
$\Lambda A^{1/2}B^{-1/2}$	266
$\Lambda A^{3/2}I^{-1/2}$	267
$\Lambda \bar{r}$	268
$P\Lambda^4$	269
$P\Lambda^2A^{-1}$	270
Pr^4A^{-4}	271

B	272
\bar{r} and \bar{r}	273
Annotations	274
BIBLIOGRAPHY	275
LIST OF SYMBOLS	278
