PREFACE TO THE SECOND EDITION	xiii
PREFACE TO THE FIRST EDITION	xv
INTRODUCTION	xix

Chapter I. VECTOR ANALYSIS

1.1	Definitions, elementary approach	1
1.2	Rotation of coordinates	6
1.3	Scalar or dot product	12
1.4	Vector or cross product	16
1.5	Triple scalar product, triple vector product	22
1.6	Gradient, ∇	28
1.7	Divergence, $\nabla \cdot$	32
1.8	Curl, $\nabla \times$	35
1.9	Successive applications of ∇	40
1.10	Vector integration	44
1.11	Gauss's theorem	48
1.12	Stokes's theorem	51
1.13	Potential theory	55
1.14	Gauss's law, Poisson's equation	63
1.15	Helmholtz' theorem	66
	References	71

Chapter 2. COORDINATE SYSTEMS

2.1	Curvilinear coordinates	73
2.2	Differential vector operations	75
2.3	Special coordinate systems—rectangular cartesian coordinates	78
2.4	Spherical polar coordinates (r, θ, φ)	80
2.5	Separation of variables	86
2.6	Circular cylindrical coordinates (ρ, φ, z)	90
2.7	Elliptic cylindrical coordinates (u, v, z)	95
2.8	Parabolic cylindrical coordinates (ξ, η, z)	97
2.9	Bipolar coordinates (ξ, η, z)	97
2.10	Prolate spheroidal coordinates (u, v, φ)	103
2.11	Oblate spheroidal coordinates (u, v, φ)	107
2.12	Parabolic coordinates (ξ, η, φ)	109
2.13	Toroidal coordinates (ξ, η, φ)	112
2.14	Bispherical coordinates (ξ, η, φ)	115
2.15	Confocal ellipsoidal coordinates (ξ_1, ξ_2, ξ_3)	117
2.16	Conical coordinates (ξ_1, ξ_2, ξ_3)	118
2.17	Confocal parabolic coordinates (ξ_1, ξ_2, ξ_3)	119
	References	120

Chapter 3. TENSOR ANALYSIS

3.1	Introduction, definitions	121
3.2	Contraction, direct product	126
3.3	Quotient rule	128
3.4	Pseudotensors, dual tensors	130
3.5	Dyadics	136
3.6	Theory of elasticity	140
3.7	Lorentz covariance of Maxwell's equations	148
	References	155

Chapter 4. DETERMINANTS, MATRICES, AND GROUP THEORY

4.1	Determinants	156
4.2	Matrices	162
4.3	Orthogonal matrices	173
4.4	Oblique coordinates	184
4.5	Hermitian matrices, unitary matrices	187
4.6	Diagonalization of matrices	194
4.7	Introduction to group theory	203
4.8	Discrete groups	208
4.9	Continuous groups	213
4.10	Generators	222
4.11	SU(2), SU(3), and nuclear particles	228
4.12	Homogeneous Lorentz Group	231
	References	235

Chapter 5. INFINITE SERIES

5.1	Fundamental concepts	237
5.2	Convergence tests	240
5.3	Alternating series	250
5.4	Algebra of series	252
5.5	Series of functions	255
5.6	Taylor's expansion	259
5.7	Power series	267
5.8	Elliptic integrals	273
5.9	Bernoulli numbers	278
5.10	Infinite products	286
5.11	Asymptotic or semiconvergent series	290
	References	295

**Chapter 6. FUNCTIONS OF A COMPLEX VARIABLE I.
ANALYTIC PROPERTIES, CONFORMAL
MAPPING**

6.1	Complex algebra	297
6.2	Cauchy-Riemann conditions	302
6.3	Cauchy's integral theorem	306
6.4	Cauchy's integral formula	311
6.5	Laurent expansion	316
6.6	Mapping	323
6.7	Conformal mapping	330
6.8	Schwarz-Christoffel transformation	340
	References	345

**Chapter 7. FUNCTIONS OF A COMPLEX VARIABLE II.
CALCULUS OF RESIDUES**

7.1	Singularities	346
7.2	Calculus of residues	350
7.3	Applications of the calculus of residues	366
7.4	The method of steepest descents	373

Chapter 8. SECOND-ORDER DIFFERENTIAL EQUATIONS

8.1	Partial differential equations of theoretical physics	381
8.2	Separation of variables—ordinary differential equations	383
8.3	Singular points	387

8.4	Series solutions—Frobenius' method	390
8.5	A second solution	401
8.6	Nonhomogeneous equation—Green's function	412
8.7	Numerical solutions	420
	References	423

Chapter 9. STURM-LIOUVILLE THEORY— ORTHOGONAL FUNCTIONS

9.1	Self-adjoint differential equations	424
9.2	Hermitian (self-adjoint) operators	432
9.3	Schmidt orthogonalization	437
9.4	Completeness of eigenfunctions	442
	References	449

Chapter 10. THE GAMMA FUNCTION (FACTORIAL FUNCTION)

10.1	Definitions, simple properties	450
10.2	Digamma and polygamma functions	458
10.3	Stirling's series	462
10.4	The beta function	467
10.5	The incomplete gamma functions and related functions	471
	References	477

Chapter 11. BESSEL FUNCTIONS

11.1	Bessel functions of the first kind, $J_\nu(x)$	478
11.2	Orthogonality	492
11.3	Neumann functions, Bessel functions of the second kind, $N_\nu(x)$	497
11.4	Hankel functions	503
11.5	Modified Bessel functions, $I_\nu(x)$ and $K_\nu(x)$	508
11.6	Asymptotic expansions	515
11.7	Spherical Bessel functions	521
	References	533

Chapter 12. LEGENDRE FUNCTIONS

12.1	Generating function	534
12.2	Recurrence relations and special properties	540
12.3	Orthogonality	546
12.4	Alternate definitions of Legendre polynomials	554
12.5	Associated Legendre functions	558
12.6	Spherical harmonics	569
12.7	Angular momentum and ladder operators	574
12.8	The addition theorem for spherical harmonics	581
12.9	Integrals of the product of three spherical harmonics	586
12.10	Legendre functions of the second kind, $Q_n(z)$	589

12.11	Application to spheroidal coordinate systems	599
12.12	Vector spherical harmonics	604
	References	605

Chapter 13. SPECIAL FUNCTIONS

13.1	Hermite functions	609
13.2	Laguerre functions	616
13.3	Chebyshev (Tschebyscheff) polynomials	624
13.4	Hypergeometric functions	632
13.5	Confluent hypergeometric functions	636
	References	642

Chapter 14. FOURIER SERIES

14.1	General properties	643
14.2	Advantages, uses of Fourier series	647
14.3	Applications of Fourier series	650
14.4	Properties of Fourier series	656
14.5	Gibbs phenomenon	662
	References	667

Chapter 15. INTEGRAL TRANSFORMS

15.1	Integral transforms	668
15.2	Development of the Fourier integral	671
15.3	Fourier transforms—inversion theorem	673
15.4	Fourier transform of derivatives	679
15.5	Convolution theorem	681
15.6	Momentum representation	683
15.7	Elementary Laplace transforms	688
15.8	Laplace transform of derivatives	693
15.9	Other properties	700
15.10	Convolution or Faltung theorem	709
15.11	Inverse Laplace transformation	715
	References	724

Chapter 16. INTEGRAL EQUATIONS

16.1	Introduction	725
16.2	Integral transforms, generating functions	732
16.3	Neumann series, separable (degenerate) kernels	733
16.4	Hilbert-Schmidt theory	743
16.5	Green's function—one dimension	748
16.6	Green's functions—two and three dimensions	759
	References	769

Chapter 17. CALCULUS OF VARIATIONS

17.1	One dependent and one independent variable	770
17.2	Applications of the Euler equation	774
17.3	Generalizations, several dependent variables	783
17.4	Several independent variables	787
17.5	More than one dependent, more than one independent variable	789
17.6	Lagrangian multipliers	790
17.7	Variation subject to constraints	794
17.8	Rayleigh–Ritz variational technique	800
	References	803
