

CONTENTS

PREFACE	ix
-------------------	----

Chapter 1. **Introductory Concepts**

1. Introduction	1
2. Quasilinearization	2
3. Invariant Imbedding	2
4. Invariant Imbedding versus the Classical Approach	3
5. Numerical Solution of Ordinary Differential Equations	4
6. Numerical Solution Terminologies	7
References	8

Chapter 2. **Quasilinearization**

1. Introduction	9
2. Nonlinear Boundary-Value Problems	10
3. Linear Boundary-Value Problems	11
4. Finite-Difference Method for Linear Differential Equations	14
5. Discussion	16
6. Newton-Raphson Method.	17
7. Discussion	20
8. Quasilinearization	21
9. Discussion	23
10. Existence and Convergence	24
11. Existence	25
12. Convergence	26
13. Maximum Operation and Differential Inequalities	28
14. Construction of a Monotone Sequence	31
15. Approximation in Policy Space and Dynamic Programming	32
16. Discussion	34
17. Systems of Differential Equations	35
References	38

Chapter 3. Ordinary Differential Equations

1. Introduction	40
2. A Second-Order Nonlinear Differential Equation	41
3. Recurrence Relation	42
4. Computational Procedure	43
5. Numerical Results	46
6. Stability Problem in Numerical Solution—The Fixed Bed Reactor	51
7. Finite-Difference Method	53
8. Systems of Algebraic Equations Involving Tridiagonal Matrices	56
9. Numerical Results	58
10. Stability Problem with High Peclet Number	61
11. Adiabatic Tubular Reactor with Axial Mixing	62
12. Numerical Results	67
13. Discussion	71
14. Unstable Initial-Value Problems	72
15. Discussion	73
16. Systems of Differential Equations	73
17. Computational Considerations	78
18. Simultaneous Solution of Different Iterations	79
References	81

Chapter 4. Parameter Estimation

1. Introduction	83
2. Parameter Estimation and the "Black Box" Problem	83
3. Parameter Estimation and the Experimental Determination of Physical Constants	84
4. A Multipoint Boundary-Value Problem	85
5. The Least Squares Approach	86
6. Computational Procedure for a Simpler Problem	86
7. Numerical Results	90
8. Nonlinear Boundary Condition	92
9. Random Search Technique	95
10. Numerical Results	97
11. Discussion	99
12. Parameter Up-dating	100
13. Discussion	102
14. Estimation of Chemical Reaction Rate Constants	103
15. Differential Equations with Variable Coefficients	105
16. An Example.	106
17. Ill-Conditioned Systems	109
18. Numerical Results	111
19. Discussion	115
20. An Empirical Approximation	116
21. Numerical Results	118
22. A Second Approximation	119
23. Numerical Results	120

24. Differential Approximation	122
25. A Second Formulation	123
26. Computational Aspects	125
27. Discussion	126
References	126

Chapter 5. Optimization

1. Introduction	129
2. Optimum Temperature Profiles in Tubular Reactors	130
3. Numerical Results	135
4. Discussion	144
5. Back and Forth Integration	146
6. Two Consecutive Gaseous Reactions	147
7. Optimum Pressure Profile in Tubular Reactor	149
8. Numerical Results	151
9. Optimum Temperature Profile with Pressure as Parameter	153
10. Numerical Results and Procedures	160
11. Calculus of Variations with Control Variable Inequality Constraint	170
12. Calculus of Variations with Pressure Drop in the Reactor	171
13. Pontryagin's Maximum Principle	174
14. Discussion	175
15. Optimum Feed Conditions	175
16. Partial Derivative Evaluation	176
17. Conclusions	176
References	177

Chapter 6. Invariant Imbedding

1. Introduction	179
2. The Invariant Imbedding Approach	180
3. An Example.	182
4. The Missing Final Condition	188
5. Determination of x and y in Terms of r and s	189
6. Discussion	191
7. Alternate Formulations—I	192
8. Linear and Nonlinear Systems	195
9. The Riccati Equation	196
10. Alternate Formulations—II	197
11. The Reflection and Transmission Functions	201
12. Systems of Differential Equations	203
13. Large Linear Systems	205
14. Computational Considerations	206
15. Dynamic Programming	208
16. Discussion	211
References	213

Chapter 7. Quasilinearization and Invariant Imbedding

1. Introduction	217
2. The Predictor-Corrector Formula	218
3. Discussion	223
4. Linear Boundary-Value Problems	224
5. Numerical Results	226
6. Optimum Temperature Profiles in Tubular Reactors	229
7. Numerical Results	232
8. Discussion	235
9. Dynamic Programming and Quasilinearization—I	236
10. Discussion	238
11. Linear Differential Equations	238
12. Dynamic Programming and Quasilinearization—II	239
13. Further Reduction in Dimensionality	243
14. Discussion	244
References	244

Chapter 8. Invariant Imbedding, Nonlinear Filtering, and the Estimation of Variables and Parameters

1. Introduction	246
2. An Estimation Problem	247
3. Sequential and Nonsequential Estimates	248
4. The Invariant Imbedding Approach	249
5. The Optimal Estimates	250
6. Equation for the Weighting Function	252
7. A Numerical Example	254
8. Systems of Differential Equations	257
9. Estimation of State and Parameter—An Example	261
10. A More General Criterion.	265
11. An Estimation Problem with Observational Noise and Disturbance Input	266
12. The Optimal Estimate—A Two-Point Boundary-Value Problem	267
13. Invariant Imbedding	268
14. A Numerical Example	270
15. Systems of Equations with Observational Noises and Disturbance Inputs	272
16. Discussion	276
References	276

Chapter 9. Parabolic Partial Differential Equations— Fixed Bed Reactors with Axial Mixing

1. Introduction	278
2. Isothermal Reactor with Axial Mixing	279
3. An Implicit Difference Approximation	280
4. Computational Procedure	283
5. Numerical Results—Isothermal Reactor	283

6. Adiabatic Reactor with Axial Mixing	285
7. Numerical Results—Adiabatic Reactor	289
8. Discussion	292
9. Influence of the Packing Particles	292
10. The Linearized Equations	294
11. The Difference Equations	296
12. Computational Procedure—Fixed Bed Reactor	300
13. Numerical Results—Fixed Bed Reactor	301
14. Conclusion	304
References	305

Appendix I. Variational Problems with Parameters

1. Introduction	306
2. Variational Equations with Parameters	306
3. Simpler End Conditions	309
4. Calculus of Variations with Control Variable Inequality Constraint	310
5. Pontryagin's Maximum Principle	312
References	313

Appendix II. The Functional Gradient Technique

1. Introduction	315
2. The Recurrence Relations	315
3. Numerical Example	320
4. Discussion	321
References	322
