CONTENTS

CHAPTER I. THE FOUNDATIONS OF MECHANICS 1

Introduction. Fundamental concepts. Newton's Laws of Motion.

CHAPTER II. PLANE STATICS AND VIRTUAL WORK 10

The equilibrium of a particle and a rigid body. Equivalent sets of forces. The work done by a force. The Principle of Virtual Work. Potential energy. Statically indeterminate systems.

CHAPTER III. CONTINUOUSLY DISTRIBUTED FORCES 45

A uniform, flexible, inelastic string hanging under gravity. Variable loading – the suspension bridge. The equilibrium of heavy elastic strings. Strings in contact with surfaces. Shearing forces and bending moments. The bending of thin elastic beams. Pure flexure. The properties of the Heaviside Unit function and its derivative. Macaulay's Method. Clapeyron's theorem of three moments. Struts.

CHAPTER IV. KINEMATICS 105

Introduction. Velocity and acceleration. Special representations. The Hodograph. Relative motion. Angular velocity. Instantaneous Centre: Centrodes.

CHAPTER V. PARTICLE DYNAMICS I: MOTION WITH ONE DEGREE OF FREEDOM 139

Introduction; conservative forces. Motion on a straight line. Simple harmonic motion and damping. Motion in a circle. Motion on other curves.

CHAPTER VI. PARTICLE DYNAMICS II: MOTION WITH TWO DEGREES OF FREEDOM 169

Introduction. The motion of a projectile in a resisting medium. Motion under a central force – general theorems. The differential equations of central orbits. The direct law of force. The inverse square law. Newton's theorem of the revolving orbit.

CHAPTER VII. SYSTEMS OF PARTICLES 206

The motion of two interacting particles. The encounter of two interacting particles. The motion of connected particles. The general theory of systems of particles. The motion of a rigid lamina. Applications of the principles of conservation of linear momentum, angular momentum and energy to the motion of rigid bodies. Moments and Products of Inertia of a plane system.

CHAPTER VIII. THE UNIPLANAR MOTION OF A RIGID BODY 249

Introduction. The motion of a rigid body about a fixed axis. Systems without a fixed axis of rotation. Conservative systems of force. Rolling and sliding motion. The use of the Instantaneous Centre: Initial Motions.

CHAPTER IX. STABILITY 292

The concept of stability. Stability of equilibrium. Oscillations about stable equilibrium. Motion on a rotating curve. Perturbation of an orbit. Systems with more than one degree of freedom.

CHAPTER X. IMPULSIVE MOTION AND VARIABLE MASS 331

Introduction. The impulsive motion of a system of particles. Collisions between particles. Collisions between bodies: energy changes. The motion of a body with changing mass – Rockets.

ANSWERS TO THE EXERCISES 365
