

# Contents

<i>Introduction</i>		<i>page</i>	<i>ix</i>
<b>1</b>	<b>The type-free <math>\lambda</math>-calculus</b>		<b>1</b>
	1A $\lambda$ -terms and their structure		1
	1B $\beta$ -reduction and $\beta$ -normal forms		4
	1C $\eta$ - and $\beta\eta$ -reductions		7
	1D Restricted $\lambda$ -terms		10
<b>2</b>	<b>Assigning types to terms</b>		<b>12</b>
	2A The system $TA_\lambda$		12
	2B The subject-construction theorem		20
	2C Subject reduction and expansion		24
	2D The typable terms		27
<b>3</b>	<b>The principal-type algorithm</b>		<b>30</b>
	3A Principal types and their history		31
	3B Type-substitutions		34
	3C Motivating the PT algorithm		38
	3D Unification		40
	3E The PT algorithm		44
<b>4</b>	<b>Type assignment with equality</b>		<b>52</b>
	4A The equality rule		52
	4B Semantics and completeness		57
<b>5</b>	<b>A version using typed terms</b>		<b>63</b>
	5A Typed terms		63
	5B Reducing typed terms		67
	5C Normalization theorems		71
<b>6</b>	<b>The correspondence with implication</b>		<b>74</b>
	6A Intuitionist implicational logic		74
	6B The Curry-Howard isomorphism		79
	6C Some weaker logics		85
	6D Axiom-based versions		88
<b>7</b>	<b>The converse principal-type algorithm</b>		<b>93</b>
	7A The converse PT theorems		93
	7B Identifications		95

7C	The converse PT proof	96
7D	Condensed detachment	102
<b>8</b>	<b>Counting a type's inhabitants</b>	<b>108</b>
8A	Inhabitants	108
8B	Examples of the search strategy	114
8C	The search algorithm	118
8D	The Counting algorithm	124
8E	The structure of a nf-scheme	127
8F	Stretching, shrinking and completeness	132
<b>9</b>	<b>Technical details</b>	<b>140</b>
9A	The structure of a term	140
9B	Residuals	144
9C	The structure of a $TA_1$ -deduction	148
9D	The structure of a type	151
9E	The condensed structure of a type	153
9F	Imitating combinatory logic in $\lambda$ -calculus	157
	<i>Answers to starred exercises</i>	161
	<i>Bibliography</i>	169
	<i>Table of principal types</i>	177
	<i>Index</i>	179
