## CHAPTER 1

### General Background

1.1. Introduction .....	1
1.2. Riemann, Stieltjes and Lebesgue Integrals .....	3
1.3. Multiple and Iterated Integrals .....	8
1.4. Improper and Infinite Integrals .....	14
1.5. Mean Value Theorems .....	20
1.6. Inequalities .....	21
1.7. Indefinite Integrals versus Definite Integrals .....	25
1.8. Fractional Integration and Differentiation .....	28
1.9. Line Integrals .....	29
1.10. Surface and Volume integrals .....	31
1.11. Symmetry Arguments .....	31
Bibliographic Notes and Comments .....	34

## CHAPTER 2

### Analytic Evaluation of Indefinite Integrals

2.1. Introduction .....	39
2.2. Liouville's Classification of the Elementary Functions .....	41
2.3. Basic Theorems for Integration in Finite Terms .....	45
2.4. Practical Integration of Rational Functions .....	49
2.5. Practical Integration of Algebraic Functions .....	52
2.6. Elliptic Integrals .....	57
2.7. Integration of Elementary Transcendental Functions .....	58
2.8. Symbolic Automatic Integration .....	63
2.9. Derivation of Integrals from Differential Equations .....	68
2.10. Approximate Methods .....	70
2.11. A Practical Example .....	72
Bibliographic Notes and Comments .....	75

## CHAPTER 3

### Analytic Evaluation of Definite Integrals

3.1. Introduction .....	77
3.2. The Gamma Function .....	79
3.3. Classical Calculus Methods .....	84
3.4. Series Methods .....	90
3.5. Complex Variable Methods .....	93
3.6. Some General Forms for Definite Integrals .....	94
3.7. Use of Integral Transforms .....	96
3.8. Frullanian Integrals .....	99
3.9. The Willis Expansion .....	105
3.10. Laplace's Method .....	108
3.11. Integration By Parts Methods .....	111
3.12. Concluding Remarks and Examples .....	115
Bibliographic Notes and Comments .....	120

## CHAPTER 4

### Numerical Evaluation of Integrals

4.1. Introduction .....	125
4.2. Simple Quadrature Formulas with Specified Nodes .....	127
4.3. Chebyshev's Equal Weight Quadrature Formulas .....	132
4.4. Gaussian Quadrature .....	135
4.5. Convergence of Quadrature Formulas .....	138
4.6. Error Analysis .....	139
4.7. Compounding and Adaptive Integration .....	144
4.8. Extrapolation Methods .....	148
4.9. The Bernstein Quadrature Formula .....	152
4.10. Monte Carlo Methods .....	153
4.11. "Best" Quadrature Formulas .....	154
4.12. Riemann and Riemann-Stieltjes Sums .....	157
4.13. Integration of Periodic Functions .....	158
4.14. Improper Integrals .....	160
4.15. Product Integration .....	164
4.16. Trigonometric Weight Functions .....	170
4.17. Integrals Over An Infinite Range .....	174
4.18. Indefinite Integrals .....	178
4.19. Multiple Integrals .....	181
4.20. Linear Integrodifferential Operators .....	186
Bibliographic Notes and Comments .....	189

## CHAPTER 5

### Quadrature by Differentiation

5.1. Introduction .....	197
5.2. Compound Rules with Correction Terms .....	198
5.3. Simple Quadrature Rules Using Derivatives .....	201
5.4. Summation Formulas .....	205
5.5. The Generalized Midpoint Rule with a Weight Function .....	206
5.6. Linear Eigenvalue Problems .....	208
5.7. Boundary-Value Problems .....	214
Bibliographic Notes and Comments .....	219

## CHAPTER 6

### Integral Equations

6.1. Introduction .....	221
6.2. Classification of Integral Equations .....	222
6.3. Conversion of Differential to Integral Equations .....	223
6.4. Direct Derivation of Integral Equations .....	227
6.5. Exact Solution of Integral Equations .....	231
6.6. Liouville-Neumann Theory .....	238
6.7. Fredholm Theory .....	241
6.8. Hilbert-Schmidt Theory .....	243
6.9. Numerical Solution of Volterra Equations .....	245
6.10. Numerical Solution of Fredholm Equations .....	250
6.11. Practical Example .....	254
Bibliographic Notes and Comments .....	260

## APPENDIX 1

List of Doctoral Dissertations on Integration and Integral Equations ....	267
---	-----

## APPENDIX 2

Integration Functions and Subroutines .....	273
---	-----

## APPENDIX 3

Subroutines for Solving Integral Equations .....	287
--	-----

AUTHOR INDEX .....	293
