

<u>Chapter</u>	<u>Page</u>
Preface . . . . .	.ii1
Introduction . . . . .	.x11
<u>I. Ordinary Differential Equations</u> . . . . .	1
1. Classification of Differential Equations . . . . .	1
2. Solution of First-Order Differential Equations . . . . .	2
Problem 1: Plate Efficiency in a Distillation Column . . . . .	9
Problem 2: Heating in an Agitated Tank . . . . .	12
Problem 3: Heating a Liquid in an Agitated Tank - Liquid Level Variable . . . . .	16
Problem 4: Open-channel Flow . . . . .	18
Problem 5: Calculation of Particle Trajectories . . . . .	25
<u>II. Linear Differential Equations of the n-th Order</u>	
<u>Linear Differential Equations with Constant Coefficients</u> . . . . .	31
1. Some General Properties of Linear Differential Equations . . . . .	31
2. Linear Differential Equations with Constant Coefficients . . . . .	32
Problem 6: Heat Conduction in Bar Fins . . . . .	37
Problem 7: Simultaneous Absorption and Chemical Reaction in a Packed Tower . . . . .	42
Problem 8: Mechanical Stability of an Automatic Control System . . . . .	42
Problem 9: Measurement of Fluctuating Pressure with a U-Tube Manometer	43
<u>III. Linear Differential Equations with Variable Coefficients</u> . . . . .	44
1. The General Linear Differential Equation . . . . .	44
2. Cauchy's Linear Equation . . . . .	44
3. Exact Linear Equation . . . . .	45
4. Reduction of Order . . . . .	46
5. Integration of Differential Equations in Series . . . . .	47
Problem 10: Solution of Bessel's Equation . . . . .	51
<u>IV. Bessel Functions</u> . . . . .	52
1. Bessel's Equation . . . . .	52
2. Solution of Bessel's Equation of Order n . . . . .	52
3. Some Useful Relations among Bessel Functions . . . . .	54
4. Roots of the Bessel Functions, $J_0(x) = 0$ and $J_1(x) = 0$ . . . . .	56
5. Asymptotic Series for the Bessel Functions . . . . .	57
Problem 11: Heat Conduction in a Wedge-Shaped Fin . . . . .	63
Problem 12: Effect of Catalyst Pellet Size on Catalytic Activity . . . . .	66
Problem 13: Temperature Distribution in Cylindrical Catalyst Beds . . . . .	69
Problem 14: Rate of Fall of a Viscous Liquid Jet . . . . .	73
<u>V. Equations of Finite Differences</u> . . . . .	77
1. Introduction, Relation to Differential Equations . . . . .	77
2. The Calculus of Finite Differences . . . . .	77
3. Solutions of Simple Difference Equations . . . . .	78
Problem 15: Calculation of the Number of Plates Required for an Absorption Column . . . . .	80
Problem 16: Calculation of the Number of Theoretical Plates Required for a Distillation Column . . . . .	83
Problem 17: Calculation of the Number of Stages Required for a Counter- current Leaching Operation . . . . .	85
Problem 18: Simultaneous Absorption and Chemical Reaction in a Plate Tower . . . . .	86

<u>Chapter</u>	<u>Page</u>
VI. <u>Partial Differential Equations</u> . . . . .	90
1. Properties of the Solutions of Partial Differential Equations . . . . .	90
2. Problem of Solving Partial Differential Equations . . . . .	91
3. A Problem in Unsteady-State Heat Conduction . . . . .	91
4. Formal Solution of an Unsteady-State Heat Transfer Problem . . . . .	92
VII. <u>Fourier Series--The Problem of Expanding A Suitably Restricted Function</u> . .	94
1. Definition of Fourier Series . . . . .	94
2. Periodicity of the Function Represented by a Fourier Series . . . . .	95
3. Sine and Cosine Series . . . . .	96
4. Extension of the Interval of Expansion . . . . .	97
5. Conditions for Representing $f(x)$ by a Fourier Series . . . . .	97
Problem 19: Development of a Fourier Series . . . . .	98
VIII. <u>Fourier Series (continued)</u>	
1. Application to Heat Conduction Problem Previously Considered . . . . .	100
2. Unsteady-State Heat Conduction in a Solid of Semi-Infinite Thickness . . . . .	101
3. The Fourier Integral . . . . .	102
4. Other Forms of the Fourier Integral . . . . .	102
5. Completion of Solution of Problem of Heat Conduction in Semi-Infinite Solid . . . . .	103
Problem 20: Mixing of Gases by Diffusion . . . . .	104
IX. <u>Orthogonal Functions and Generalized Fourier Expansion</u>	
1. Problem of Unsteady-State Heat Flow in a Cylinder . . . . .	108
2. Orthogonal Functions . . . . .	109
3. Generalized Fourier Series . . . . .	110
4. Other Types of Orthogonality . . . . .	110
5. Differential Equations Leading to Orthogonal Functions . . . . .	111
6. Completion of Unsteady-State Heat Transfer Problem in an Infinite Cylinder . . . . .	112
X. <u>An Introduction to Operational Calculus</u>	
1. Introduction . . . . .	114
2. The Laplace Transformation . . . . .	114
3. Application of the Transform to an Ordinary Differential Equation . . . . .	115
4. Further Properties of the Transformation . . . . .	116
5. Expansion of $g(p)$ in Partial Fractions . . . . .	117
6. Heaviside's Partial Fractions Expansion Theorem . . . . .	119
7. Application of the Transform to a Linear Partial Differential Equation . . . . .	119
8. Some General Remarks on the Usefulness of the Laplace Transformation . . . . .	122
Problem 21: Measurement of Periodically-Varying Temperature . . . . .	126
Problem 22: Calculation of the Transform of a Saw-Tooth Function . . . . .	132
Problem 23: Transfer of Material Between Phases by Diffusion . . . . .	134
Problem 24: Rate of Approach to Equilibrium of a Vapor-Liquid Equilibrium Still . . . . .	136
Problem 25: Heat Transfer to a Fluid in Laminar Flow Through a Tube . . . . .	140
XI. <u>The Transient Behavior of Diffusional Operations Equipment</u>	
1. Introduction . . . . .	144
2. Packed Columns--Development of Basic Differential Equations . . . . .	144
3. Plate or Stage-wise Apparatus--Derivation of Basic Differential Equation . . . . .	146
4. Packed Column Containing a Fixed Bed of Solid Material . . . . .	147
5. A Useful Simplification of the General Packed Tower Equations for Problems in Which the Vapor Hold-up is not Negligible . . . . .	147
6. Interpretation of Equations for Heat Transfer Problem . . . . .	148
7. Rate of Approach to Equilibrium of a Packed Distillation Column Operating at Total Reflux . . . . .	148

<u>Chapter</u>		<u>Page</u>
Problem 26:	Rate at which a Plate-Type Distillation Column Approaches Equilibrium . . . . .	152
Problem 27:	Proof that $y(N,t)$ Approaches $y_1$ as $t$ Approaches zero in Problems on Rate of Approach to Equilibrium of Distillation Columns . . . . .	157
Problem 28:	Estimation of the Number of Theoretical Plates in a Distillation Column from its Transient Behavior . . . . .	158
Problem 29:	Rate of Approach to Equilibrium of a Plate-Type Absorption or Extraction Column . . . . .	159
Problem 30:	Transient Behavior of an Adsorption Column . . . . .	163
