Contents

Preface	**xi**
Chapter 1 The Optimization Problem	**1**
Mathematical Preliminaries	2
Nonlinear Programming	14
Linear Programming	19
Solved Problems	20
Supplementary Problems	31
Chapter 2 Classical Optimization	**33**
Maxima, Minima, and Saddle Points	33
Unconstrained Problems	40
Computational Considerations	44
Solved Problems	47
Supplementary Problems	51
Chapter 3 Constraints and Lagrange Multipliers	**55**
Lagrange Multipliers	55
Economic Interpretation	60
Existence of λ	63
Inequality Constraints	65
Computational Methods	67
Solved Problems	69
Supplementary Problems	79
Chapter 4 Optimization with Inequality Constraints	**81**
The Kuhn-Tucker Theorem	81
The Constraint Qualification	86
Saddle-Point Conditions	90
Duality	91
Solved Problems	94
Supplementary Problems	114

Chapter 5 One-Dimensional Search Techniques 117
Unimodal Functions 117
Dichotomous Search 119
Equal-Interval Search 120
Fibonacci Search 122
Golden-Section Search 127
Quadratic Interpolation 129
Exhaustive Search 132
Solved Problems 133
Supplementary Problems 138

Chapter 6 Unconstrained Gradient Techniques 139
The Gradient Direction 139
The Gradient Algorithm 145
The Optimal Gradient 147
Convergence Considerations 148
Solved Problems 151
Supplementary Problems 161

Chapter 7 Constrained Gradient Techniques 163
Boundary Following with Inequality Constraints 163
Boundary Following with Equality Constraints 173
Solved Problems 179
Supplementary Problems 194

Chapter 8 Penalty-Function Methods 197
A Simple Penalty Function 197
Other Penalty Functions 203
Solved Problems 209
Supplementary Problems 217

Chapter 9 Quadratically Convergent Minimization Algorithms 219
Quadratic Functions 220
Conjugate Directions in E^n 223
Minimization with Conjugate Directions of Descent 224
Conjugate-Direction Algorithms 226
Generation of Conjugate Directions by One-Dimensional Search 229
Variable-Metric Algorithms 232
Solved Problems 238
Supplementary Problems 242

Chapter 10 Quadratic Programming 245
Equality Constraints 245
Feasible Solutions 245
Kuhn-Tucker Conditions 247
Influence of the Constraints on the Minimization Problem 248
Method of Theil and Van de Panne 250
Dual Problem 253
Method of Hildreth and D'Espo 254
Capacity Method of Houthakker 258
Modified Simplex Methods 260
Solved Problems 264
Supplementary Problems 268

Chapter 11 Integer Programming 269
Truncation and Rounding 271
Branch-and-Bound Method 272
Cutting-Plane Methods 276
Solved Problems 280
Supplementary Problems 288

Chapter 12 Dynamic Programming 291
Multistage Decision Processes 291
Method of Direct Enumeration 292
Principle of Optimality 294
Functional Equation 294
Computational Requirements with One State Variable 300
Computational Requirements with Two State Variables 304
Infinite-Stage Processes and Successive Approximations 307
Solved Problems 309
Supplementary Problems 324

Chapter 13 Large-Scale Programming 325
Lagrangian Decomposition 326
Feasible Methods 332
Dual Feasible Methods 335
Economic Interpretation 337
Solved Problems 339
Supplementary Problems 349

Appendix Linear Programming 351
Basic Feasible Solutions 355
Simplex Algorithm 358

Simplex Tableau 360
Dual Problem 364
Solved Problems 365
Supplementary Problems 370

References 373

Answers to Supplementary Problems 381

Index 387
