Series Foreword xi
Preface xiii
List of Notations xvii
Up and Running xix

I Preparations

1 Introduction 3

2 Modeling Linear Optimization Problems 7

2.1 Linear Programs in Standard Form 8
2.2 Modeling Issues and Nonlinear Effects 12
2.3 Graphical Solution of Linear Programs 14
2.4 Problem Areas 17
2.5 Additional Reading 20

3 The Simplex Algorithm 21

3.1 Linear Systems of Equations 22
3.2 Bases and Basic Solutions 23
3.3 Replacing Vectors in a Basis 25
3.4 Fundamental Properties of Linear Programming Problems 27
3.5 Pivot Operation in Solving a System of Equations 35
3.6 Starting and Stopping the Simplex Algorithm 42
3.7 Matrix Form of the Pivot Operation 47
3.8 Duality 49
3.9 Additional Reading 52

4 A First Look at an Interior-Point Algorithm 53

4.1 Geometric Explorations 53
4.2 Mathematical Requirements 60
4.3 Additional Reading 69

II Algorithms

5 The Primal Algorithm 73

5.1 Scaling 74
5.2 Taking an Interior Step 77
5.3 Free Variables 78
5.4 How to Start 79
5.5 When to Stop 81
5.6 A Digression 83
5.7 Additional Reading 89

6 The Dual Algorithm 91

6.1 Scaling 92
6.2 Primal Estimates 95
6.3 Additional Reading 101

7 The Primal-Dual Algorithm 103

7.1 Newton's Method 105
7.2 The Barrier Method 107
7.3 Developing the Algorithm 108
7.4 Summary 120
7.5 Additional Reading 124

8 Implementation Issues 125

8.1 Solving Systems of Linear Equations 125
8.2 Solving Symmetric Systems of Equations 130
8.3 Sparse Matrix Techniques 143
8.4 Additional Reading 150

III Solutions

9 The Integrated Environment 153

9.1 The File Command 155
9.2 The Edit Command 158

9.3 The Spec File Command 163
9.4 The Solve Command 174
9.5 The View Command 175
9.6 The Print Command 177
9.7 The Run Demo Command 180

10 Command-Line Operations 185

10.1 Solving a Model 185
10.2 Editing the Specfile 185

Appendix A: The MPS File Format 189
Appendix B: The Netlib Test Collection 195
Selected Bibliography 203
Index 207
