PREFACE	vii

1. Quantum Field Theory

R. HAAG

Introduction	1
Mathematical structure of quantum physics	2
Poincaré invariance	9
Fields and locality	10
States of interest: energy-momentum spectrum and particle aspects	14

2. Topics in Functional Analysis

B. SIMON

Introduction	17
Operator theory	18
Spectral properties of dynamical generators	30
Quadratic forms	41
The Gel'fand theory of commutative Banach algebras	48
The GNS construction	54
von Neumann algebras: an introduction	61
The CCR and CAR	67

3. Boson Quantum Field Models

J. GLIMM and A. JAFFE

Part 1 General results

Introduction	77
Hermite operators	80
Gaussian measures and the Schrödinger representation	86
Hermite expansions and Fock space	95

Part 2 The solution of two-dimensional Boson models

The interaction Hamiltonian	101
The free Hamiltonian	108
Self-adjointness of $H(g)$	113
The local algebras and the Lorentz group automorphisms	118

Part 3 Further developments

Locally normal representations of the observables	127
The construction of the physical vacuum	133
Formal perturbation theory and models in three space-time dimensions	137
Two notes	143

4. States and Representations in Statistical Mechanics

N. M. HUGENHOLTZ

Introduction	145
Observable algebras	147
The ground state	156
The equilibrium state at non-zero temperature: the K.M.S. condition	162
Faithful states on the algebra of $n \times n$ matrices	170
Quasi-unitary algebras and the commutant theorem	175
Theorem of Tomita and applications	179

5. Quantum Scattering Systems: A Guide to the Literature

K. HEPP

Introduction	183
Spectra of multiparticle Hamiltonians	183
Time-dependent potential scattering	184
Time-independent potential scattering	185
Systems with infinitely many degrees of freedom	185
Scattering in local quantum field theory	186

6. Linear Fields According to I. E. Segal

P. J. M. BONGAARTS

Introduction	187
The Heisenberg relations	188
Weyl systems and quantum theory	191
The free Boson field	194
Fermion systems	203

7. The Free Boson Gas

J. T. LEWIS

Introduction	209
Representations of the CCR	210
Equilibrium states	215

Applications	220
Kac's method	222

8. Self-adjointness of the Locally Correct Generator of Lorentz Transformations for $P(\phi)_2$ 227

A. KLEIN

9. Algebras with Quasiloal Structure and Factorizable Representations

K. SCHMIDT

Introduction: Current groups	237
Direct integral representations of $\Gamma(\mathbf{R}^{\nu}, G)$	239
Factorizable representations of $\Gamma(\mathbf{R}^{\nu}, G)$	239
Representations of the CCR	242
Factorizable states on algebras with quasiloal structure	245
Algebras with quasiloal structure which are generated by a representation of a current group	248
BIBLIOGRAPHICAL INDEX	253
AUTHOR INDEX	267
SUBJECT INDEX	271
