INTRODUCTION	vii
I INTEGRAL TRANSFORMS AND THEIR INVERSION FORMULAE	I
Integral transforms. Fourier's integral formula. Inversion formulae. Summary. Examples.	
II THE LAPLACE TRANSFORM	18
Application of Laplace transform to ordinary differential equations. A simple problem in heat conduction. On the evaluation of the contour integral of the inversion formula. An example in the radial flow of heat. Special solutions for small values of the time. Verification of solution. Examples.	
III FOURIER TRANSFORMS	32
Sine and cosine transforms. The heat conduc- tion problem of § 2.3 solved by a sine transform. An example of the repeated use of transforms. The complex Fourier transform. The motion of a very long string. Stresses in a long circular cylinder. Examples.	
IV HANKEL AND MELLIN TRANSFORMS	46
The problem of Boussinesq. The electrified disc. An application of the Mellin transform. Examples.	
V THE NUMERICAL EVALUATION OF INTEGRALS IN SOLUTIONS	60
Values at end points. Asymptotic series. Filon's method for trigonometrical integrals. A worked example. Examples.	

vi TRANSFORMS IN MATHEMATICAL PHYSICS

CHAPTER	PAGE
VI FINITE TRANSFORMS	77
Finite Fourier transforms. Example of the use of the finite sine transform. Example of the repeated use of finite transforms. Example of the use of the finite cosine transform. Example in heat conduction with radiation boundary condition. The finite Hankel transform. The problem of § 2.5 solved by a finite Hankel transform. Heat flow in a cylinder with radiation at the surface. Motion of viscous fluid between concentric cylinders. Extension to other kernels. Legendre transforms. Electrified disc solved by a Legendre transform. Examples.	
VII THE COMBINED USE OF RELAXATION METHODS AND INTEGRAL TRANSFORMS	104
Introduction. The finite cylinder. The semi-infinite cylinder. Examples.	
VIII DUAL INTEGRAL EQUATIONS	111
Introduction. The formal reduction of a special case of the dual integral equations to a system of linear algebraical equations. The solution of the algebraical equations in some special cases. A simple example. The electrified disc between earthed parallel plates. The reduction of dual integral equations to a Fredholm integral equation. Recent developments. Examples.
