<i>Preface</i>	<i>page</i> xv
1 Simultaneous equations	1
1.1 Two equations for two unknowns	1
1.2 Three equations for three unknowns	5
1.3 Special case : $c_k = 0$	10
Problems	12
2 Three-dimensional geometry	14
2.1 Geometry is relevant	14
2.2 Résumé of two-dimensional geometry	16
2.2.1 The straight line	16
2.2.2 The circle	17
2.2.3 The ellipse	19
2.2.4 General considerations	22
2.3 Three dimensions : Basics	23
2.3.1 Axes	23
2.3.2 Directions in space	24
2.4 Planes in three dimensions	26
2.5 Lines in three dimensions	29
2.5.1 Equation of a line	29
2.5.2 Worked example : Shortest distance from a point to a line	31
2.5.3 Skew lines	32
2.6 Spheres, etc.	37
2.7 Conclusion	39
Problems	40
3 Vectors	43
3.1 Preliminaries	43
3.2 Multiplication by a scalar and vector addition	46

3.3	Scalar and vector products of vectors	49
3.3.1	Definitions	50
3.3.2	Why are they defined like this?	50
3.3.3	Non-commutation of vector product	52
3.3.4	Special cases	52
3.3.5	Equations with vector and scalar products	54
3.3.6	Applications	55
3.4	Triple scalar and vector products	58
3.4.1	Definitions and simple properties	58
3.4.2	Applications	61
3.5	Vector geometry	63
3.5.1	Simple shapes	63
3.5.2	Translations and rotations	67
3.6	Non-orthogonal axes	69
3.7	Solution of vector equations	73
3.8	Differentiating vectors	76
3.8.1	Simple examples	76
3.8.2	Moving axes	77
	Problems	80
4	Complex numbers	82
4.1	What are complex numbers?	82
4.2	Arithmetic of complex numbers	84
4.2.1	Addition	84
4.2.2	Subtraction	85
4.2.3	Multiplication	86
4.2.4	Division	90
4.2.5	Square root of $i$	92
4.3	Using complex numbers	95
4.3.1	Polynomial equations	95
4.3.2	Summing trigonometric series	97
4.3.3	Simultaneous differential equations	99
4.4	Second order differential equations, physics and complex numbers	100
4.5	Other electrical circuits	111
4.6	Power dissipation in AC circuits	112
4.7	Resonance in the series electrical circuit	114
4.7.1	Resonance frequency	114
4.7.2	Width of resonance	116
4.7.3	Quality factor	119
4.7.4	Phase of output	121

4.7.5	Relation between free and forced oscillations	123
4.8	Resonances in other systems	125
4.8.1	Mechanical	125
4.8.2	Atoms	126
4.8.3	Nuclear reactions	128
4.8.4	Elementary particle reactions	130
	Problems	132
5	Ordinary differential equations	135
5.1	What are differential equations?	135
5.1.1	Geometry	135
5.1.2	Radioactive decay	136
5.1.3	Statics	136
5.1.4	Dynamics : A spring	137
5.1.5	Dynamics : Planets	139
5.1.6	Coupled differential equations	141
5.1.7	Partial differential equations	143
5.1.8	Definitions	143
5.2	How to solve differential equations	145
5.3	Separable variables	145
5.4	Almost separable	146
5.5	Homogeneous equations	147
5.6	Nearly homogeneous equations	149
5.7	Exact equations	150
5.8	Integrating factors	154
5.9	Bernoulli's equation	156
5.10	Second order equations : General properties	157
5.11	Finding the complementary function	160
5.11.1	Separate exponentials	160
5.11.2	Harmonic solutions	162
5.11.3	Decaying oscillations	163
5.11.4	Critical damping	166
5.12	Finding the particular integral	167
5.12.1	The rules	168
5.12.2	Examples of applying the rules	169
5.12.3	Determining the coefficients	171
5.13	The $D$ operator method	173
5.13.1	Introduction	173
5.13.2	Rules for $D$ operators	174
5.13.3	Examples	175
5.13.4	Other applications of $D$ operators	180

5.14	Resonance	181
5.15	Simultaneous differential equations	185
5.15.1	$D$ operator method	186
5.15.2	Complex numbers approach	186
5.15.3	Use of linear combinations of $x$ and $y$	187
5.15.4	Normal modes	189
5.16	Final comments	189
	Problems	192
6	Partial derivatives	200
6.1	Introduction	200
6.2	What does it mean?	202
6.3	Relationships among partial derivatives	208
6.3.1	$\frac{df}{dt} = \frac{\partial f}{\partial x} \frac{dx}{dt} + \frac{\partial f}{\partial y} \frac{dy}{dt}$	209
6.3.2	$\frac{df}{dx} = \frac{\partial f}{\partial x} + \frac{\partial f}{\partial y} \frac{dy}{dx}$	211
6.3.3	$\left(\frac{\partial f}{\partial x}\right)_u = \left(\frac{\partial f}{\partial x}\right)_y + \left(\frac{\partial f}{\partial y}\right)_x \left(\frac{\partial y}{\partial x}\right)_u$	212
6.3.4	Changes of variable	213
6.3.5	$\frac{\partial f}{\partial x} = \pm \frac{\partial f}{\partial y} \frac{\partial y}{\partial x}$	217
6.4	Jacobians	222
	Problems	230
7	Taylor series	232
7.1	Taylor series in one dimension	232
7.2	Examples of Taylor and Maclaurin series	236
7.2.1	An accelerating body	236
7.2.2	Exponentials	237
7.2.3	$\sin x$	237
7.2.4	A trivial example	238
7.2.5	$\tan x$ , and difficulties	239
7.3	Mean value theorem	242
7.4	Maxima and minima in one dimension	244
7.5	Two-dimensional Taylor series	245
7.6	Maxima, minima and saddle points	254
7.7	Simple examples of two-dimensional stationary values	258
7.7.1	Minima	259
7.7.2	Maxima	261
7.7.3	Saddle points	261
7.8	A more realistic example	268

Problems	273
8 Lagrangian multipliers	274
8.1 What problem are we solving?	274
8.2 Deriving the Lagrange conditions	278
8.3 Some simple problems	281
8.3.1 Fencing around a field	281
8.3.2 The train on a hill	282
8.3.3 Axes of an ellipse	283
8.4 More examples	285
8.4.1 Shortest distance between two skew lines	286
8.4.2 Tossing a penny	287
8.4.3 A statistical mechanics problem	288
Problems	293
<i>Appendix A</i> Basic techniques	296
A1 Systems of axes	296
A2 Transformations	297
A2.1 Translations	298
A2.2 Rotations	299
A3 Differentiation	300
A4 Integration	302
A4.1 Definite and indefinite integrals	303
A4.2 Methods of integration	304
A5 Proof by induction	307
A6 Leibnitz's theorem	308
A6.1 Uses of Leibnitz's theorem	309
A7 Limits	310
A8 Parity	313
A8.1 Odd and even functions	313
A8.2 Applications to physics	315
<i>Appendix B</i> Useful formulae	316
<i>Index</i>	321
