<i>Preface</i>	ix
1 INTRODUCTION	1
1.1 Preliminary remarks	1
1.2 Correlation	3
1.3 Matrices	3
1.4 Matrix inverse: the square-root method	4
2 FACTOR ANALYSIS: THE CENTROID METHOD	8
2.1 Introduction	8
2.2 Interpretation of factors	10
2.3 The centroid method: extraction of the first factor	13
2.4 Expected values after computation of first factor	16
2.5 Determination of reflected variables	18
2.6 Extraction of the second factor	20
2.7 Expected values after extraction of second factor	21
2.8 Extraction of the third factor	23
3 ROTATION OF FACTORS	26
3.1 Introduction: orthogonal rotation	26
3.2 Oblique rotation	31
3.3 Higher-order factors	34
3.4 Analytical methods of rotation	34
4 PRINCIPAL FACTOR ANALYSIS	36
4.1 Introduction	36
4.2 A numerical example of the principal factor method: initial component analysis	39
4.3 Extraction of first factor loadings	40
4.4 Expected values after computation of first factor	43
4.5 Extraction of second factor	44
4.6 Comparison between principal components and principal factor solutions to the socio-economic problem on father - son status	47

4.7	Interpretation of factors	47
4.8	Rotation of factors	48
4.9	Other methods of factor analysis	48
4.10	The square-root method: extraction of first factor loadings	50
4.11	Extraction of the second factor loadings	51
4.12	Uniqueness of solutions	53
4.13	Geometrical interpretation of principal factor analysis	54
4.14	Some practical examples of the techniques	55
5	MULTIPLE GROUPS ANALYSIS	58
5.1	Introduction	58
5.2	Producing the oblique factor matrix	59
5.3	Production of oblique factor pattern	61
5.4	Production of the orthogonal factor matrix	62
5.5	Derivation of the factor pattern	65
5.6	Obtaining the residuals from B and P directly	67
5.7	Obtaining P directly from B	68
5.8	Linkage analysis	68
5.9	Flow-diagram	71
6	MULTIDIMENSIONAL SCALING	72
6.1	Introduction: factor-analysing matrices of sums of cross-products	72
6.2	Estimating distances	75
6.3	Production of matrices of proportions	78
6.4	Production of distances	78
6.5	Determination of sums of cross-products	85
6.6	Factor analysis of sums of cross-products	86
6.7	Interpretation of results	91
6.8	Assumptions and difficulties of the method	91
6.9	Scaling with unknown distance functions	93
6.10	An example from the literature	93
7	DISCRIMINANT ANALYSIS	95
7.1	Introduction	95
7.2	Discriminant function analysis: the case of two groups	95
7.3	Computing the weights, w_i	96
7.4	Obtaining discriminant function scores	98
7.5	Testing the significance of the discriminant function	98
7.6	Classification on the basis of discriminant function scores	101
7.7	The seriousness of misclassification	102

<i>Contents</i>	vii
7.8 Unequal <i>a priori</i> probabilities	102
7.9 An alternative way of presenting the discriminant values	103
7.10 Generalisation to more than two groups	105
7.11 Classification of individuals	106
7.12 Canonical discriminant analysis	108
7.13 Significance of the above discriminant functions	109
7.14 Mean discriminant function scores	110
7.15 Classification of individuals, the canonical case	113
7.16 Unequal base rates	115
7.17 Applications	116
8 THE ANALYSIS OF QUALITATIVE DATA	118
8.1 Introduction	118
8.2 Repertory grid – factor analysis with qualitative data	119
8.3 Public attitudes to politicians, the use of repertory grid: production of the constructs	120
8.4 Measurements of constructs	122
8.5 Interpretation of factors	124
8.6 The pattern probability model – discriminating between groups with qualitative data	126
8.7 Equal base rates model	127
8.8 Unequal base rates model	130
8.9 Latent structure analysis	133
8.10 An example with two latent classes and three dichotomous items	133
8.11 The basic model	136
8.12 Solution of accounting equations	137
8.13 Classification of respondents	140
8.14 An example from the literature	140
9 CONCLUDING REMARKS AND OVERVIEW	142
9.1 Aims of factor analysis	142
9.2 Factor measurement	143
9.3 <i>Q</i> -type factor analysis	145
9.4 Factor analysis and multiple regression	146
9.5 An overview	147
9.6 Other multivariate techniques	149
<i>References</i>	151
<i>Index</i>	153
