

C O N T E N T S

Foreword	xi
Preface	xiii
1. Introduction	3
1.1. Aims, Achievements, and Shortcomings	3
1.2. Synopsis of Chapters	14
1.3. Reader's Guide.	22
2. The Problem of Description	24
2.1. Measure Theory, I.	25
Sigma-fields.	25
The Extended Real Numbers	28
Countable Additivity	29
Measures	31
2.2. Representation of the Real World by Measures:	
Preliminaries.	32
Appendix on Additivity.	35
2.3. Space, Time, and Resources	36
Appendix on Resources.	39
2.4. Measure Theory, II	41
Restricted Measures.	41
Product Spaces.	43
Measurable Functions	46
2.5. Representation of the Real World by Measures:	
General Theory	50
Histories	50
Cross-sectional Measures.	53
Production and Consumption	58
Appendix on Histories	60
2.6. Measure Theory, III.	61
Finite and Sigma-finite Measures	62
Atomic and Nonatomic Measures	63
Integration	65
Indefinite Integrals	68
Densities	70
Induced Integrals	74
Convergence Theorems	75

	Extension of Set Functions	79
	Abcont and Product Measures	80
	Distribution Functions	90
	Signed Measures	92
2.7.	Activities	101
	Metric Spaces and Congruent Measures	102
	Configuration Types	105
	Activities	108
	Activity Types	111
	Scale of Activities	113
	Some Everyday Activities	116
2.8.	Multilayer Measures	121
3.	The Comparison of Infinite Measures	124
3.1.	Jordan Decomposition Theory	124
3.2.	Pseudomeasures	135
	The Algebra of Pseudomeasures	139
	Integration with Pseudomeasures	142
	Applications of Pseudomeasures	147
3.3.	Narrow and Standard Ordering of Pseudomeasures	150
	Partial Orderings in General	150
	Partial Orderings on Vector Spaces	153
	Narrow Ordering of Pseudomeasures	154
	Standard Ordering of Pseudomeasures	157
	Applications	160
	Bernoullian Utility under Standard Order	164
3.4.	Extended Ordering of Pseudomeasures	175
	Conclusion	182
4.	Feasibility	184
4.1.	Introduction	184
4.2.	Uncontrollable Regions	186
4.3.	Cross-sectional Constraints	188
	Integer Values and Finite Concentration	188
	Space Capacity	190
	Resource Capacity	193
	Disallowed Configurations	193
4.4.	Intertemporal Constraints	194
	Noninteractive Systems	194
	Barriers	194
	A Pollution Model	195
4.5.	Activity Distributions	199
4.6.	Neighborhood Effects	205
4.7.	Superposition and Returns to Scale	210
4.8.	Indivisibility	213
4.9.	Spatial Control	214

5. The Allocation of Effort	219
5.1. Introduction	219
5.2. Formulating the Problem.	221
5.3. Sufficient Conditions for Optimality	225
5.4. Necessary Conditions for Optimality	228
5.5. Existence of Feasible Solutions	251
5.6. Existence of Optimal Solutions	253
5.7. Uniqueness of Optimal Solutions	264
5.8. Police, Criminals, and Victims.	266
6. Markets	279
6.1. Budget Constraints	279
6.2. Rentals	284
6.3. Imperfect Markets.	289
6.4. The Real-estate Market.	293
6.5. Real-estate Preferences	297
6.6. Equilibrium in the Real-estate Market	301
6.7. Joint Control and Agent Measure Spaces	307
6.8. Comparison with Alonso's Theory	310
6.9. Pseudomeasure Treatment of the Real-estate Market	315
Appendix: The Vector Lattice of Pseudomeasures	327
7. The Transportation and Transshipment Problems	330
7.1. The Transportation Problem: Introduction	330
7.2. The Transportation Problem: Existence of Feasible Solutions	333
7.3. The Transportation Problem: Duality	337
7.4. The Transportation Problem: Existence of Optimal Solutions	346
7.5. The Transportation Problem: Existence of Potentials	355
7.6. Transshipment: Introduction	372
7.7. Transshipment: Measure-theoretic Formulations	376
7.8. Transshipment: Feasibility	381
7.9. Transshipment: Duality	385
7.10. Transshipment under the Triangle Inequality	389
7.11. The Skew Transshipment Problem	393
8. The Theory of Thünen Systems	403
8.1. Introduction	403
8.2. Ideal Distances and Ideal Weights	404
8.3. Ideal Distances in Thünen Systems	407
8.4. Land Uses.	410
Formal Structure	411
Interpretations and Illustrations.	415
8.5. The Allotment-assignment Problem	420
Potentials	444
8.6. Applications of Allotment-assignment	457
Allocation of Effort as a Thünen Problem	457

	Thünen Systems without a Nucleus	472
	Quality Complementarity	474
	A Combinatorial Application	478
8.7.	The Thünen System as a Social Equilibrium:	
	Formal Theory	479
	A Simplified Approach	500
8.8	The Thünen System as a Social Equilibrium: Discussion . . .	503
8.9	Thünen Systems and the Real World	515
9.	Some General Problems of Location	530
9.1.	Spatial Preferences.	530
9.2.	Some Informal Models	541
9.3.	Interplant and Interindustry Location	555
	Interplant Location	557
	Interindustry Location	563
	Simply Concentrated Industries	570
9.4.	The Weber Problem	575
	Formal Theory.	582
	The Weber Problem in a Thünen System.	591
9.5.	Market Regions	598
9.6.	Service Systems	621
	Introduction: Examples.	621
	Systems with One Plant.	629
	Pseudomeasure Treatment of the One-plant Case	638
	Systems with Many Plants	641
	Shipment Patterns and Mills-Lav Arrangements	649
	Variable Plant Locations and Numbers.	659
	Title Index	669
	Author and Name Index	673
	Subject Index	677
