

CONTENTS

	Page
Preface to the first Edition	xi
Preface to the second Edition	xii
Glossary	xiv
Chapter I: <u>Fourier Series and Fourier Integrals</u>	1
1. Periodic Functions	1
2. Fourier Series for Functions with Period 2π	2
3. The Complex Form of the Fourier Series of Functions with Period 2π	10
4. Odd and Even Functions	11
5. The Fourier Series for Odd and Even Functions with Period 2π	13
6. The Fourier Series of Functions with Arbitrary Period	16
7. The Differential Equation for a Vibrating String, and its Solution by Fourier's Method	21
8. Fourier's Integral	25
9. The Complex Form of the Fourier Integral	30

MATHEMATICAL METHODS FOR TECHNOLOGISTS

Chapter I (contd.)	Page
10. The Fourier Integrals of Odd and Even Functions	32
11. Orthogonal Systems of Functions	34
12. Minimal Properties of the Fourier Coefficients	41
 Chapter II: <u>The Elements of Vector Analysis</u>	 44
1. The Basic Concepts of Vector Algebra	44
2. Vector Functions of a Scalar Variable	46
3. The Moving Trihedron of a Curve in Three-dimensional Space	48
4. Scalar Fields. The Gradient of a Scalar Field	50
5. Curvilinear Integrals	52
6. Vector Fields	60
7. Surface Integrals	63
8. Green's Formula	68
9. Gauss's Theorem. The Divergence of a Vector Field	70
10. Stokes's Theorem	74
11. The Vector Form of Stokes's Theorem. The Curl of a Vector Field	77
12. Differential Operations of the Second Order	79
13. Hamilton's Notation	81
14. Vector Operators in Curvilinear Co-ordinates	82

CONTENTS

	Page
Chapter III: <u>The Foundations of Analytic Function Theory</u>	91
1. Complex Numbers	91
2. Series with Complex Terms	94
3. Power Series	96
4. The Exponential, Hyperbolic and Trigonometric Functions of a Complex Variable . . .	100
5. Some Many-valued Functions of a Complex Variable	105
6. The Derivative of a Function of a Complex Variable	108
7. Analytic and Harmonic Functions	114
8. The Integral of a Function of a Complex Variable	116
9. Cauchy's Theorem	120
10. Cauchy's Integral Formula	124
11. Cauchy-type Integrals	126
12. Higher Derivatives of Analytic Functions	129
13. Sequences and Series of Analytic Functions	129
14. Taylor's Series	132
15. The Laurent Series	137
16. The Isolated Singularities of an Analytic Function	139
17. Residues	143
18. The Principle of the Argument	151
19. Differentiable Mappings	154

MATHEMATICAL METHODS FOR TECHNOLOGISTS

Chapter III (contd.)	Page
20. The Conformal Mapping of Regions . . .	163
Chapter IV: <u>On Some Special Functions</u>	177
1. The Gamma-Function	177
2. Bessel Functions	183
3. Reduction Formulae for Bessel Functions .	188
4. Bessel Functions of Index $n + \frac{1}{2}$. . .	190
5. The Integral Representation of Bessel Functions with Integral Index	192
6. An Asymptotic Formula for $J_n(x)$ for Large x	195
7. The Integral Logarithm, Sine and Cosine	200
Chapter V: <u>The Laplace Transform</u>	206
1. Some Notes on Integrals which are Functions of a Parameter	206
2. The Laplace Transform	210
3. Some Simple Properties of the Laplace Transform	213
4. The Convolution of Two Functions . . .	216
5. Functions with Rational Transforms . . .	219
6. The Application of the Laplace Transform to the Solution of Differential Equations with Constant Coefficients, and to Systems of Such Equations	222
7. The Application of the Laplace Transform to the Solution of Linear Finite-Difference Equations with Constant Coefficients . . .	225

CONTENTS

Chapter V (contd.)	Page
8. Functions with Transforms Regular at Infinity	232
9. The Transforms of some Special Functions	240
10. Inversion Formulae	244
11. A Sufficient Condition for an Analytic Function to be a Laplace Transform .	248

Set by Maureen King
