

Contents

1. Introduction: The Mathematics of Ecological Diffusion	1
1.1 A History of Research on Diffusion in Ecology	1
1.2 The Value of Mathematical Models	3
1.3 Deterministic <i>versus</i> Stochastic Methods	5
2. The Basics of Diffusion	8
2.1 Random Variables	8
2.2 The Random Walk and Diffusion	9
2.3 Fick's Equation of Diffusion	11
2.4 Turbulence and Turbulent Diffusion	11
2.5 Diffusion in a Force Field	15
2.6 The Theory of Diffusion in Natural Environments: Physical Diffusion	15
2.6.1 Diffusion in Atmospheric Boundary Layers	21
2.6.2 Oceanographic and Limnological Diffusion	22
3. Passive Diffusion in Ecosystems	25
3.1 Diffusion Within and Above Plant Canopies	25
3.2 Diffusion of Nutrients in the Sea	29
3.3 Diffusion of Spores	31
3.3.1 Settling Velocity	31
3.3.2 Diffusion Model	33
3.3.3 Experiments on Spore Dispersal	36
3.3.4 Vertical Distributions over Wide Regions	38
3.4 The Dispersal of Fish Eggs and Larvae in the Sea	40
3.5 Fluid Exchange in Animal Burrows	42
4. Diffusion of "Smell" and "Taste": Chemical Communication	51
4.1 Diffusion of Insect Pheromones	51
4.1.1 Instantaneous Emission in Still Air	52
4.1.2 Continuous Emission in Still Air	54
4.1.3 Continuous Emission from a Moving Source	54
4.1.4 Continuous Emission of Pheromone in a Wind	56
4.2 A Diffusion Problem Concerning the Migration of Green Turtles	58
4.3 Chemical Communication in Aquatic Organisms	61

5. Mathematical Treatment of Biological Diffusion	63
5.1 Animal Motion and the Balance of Acting Forces	63
5.2 Taxis and the Equation of Motion	66
5.3 Extension of the Random Walk Model and the Equation of Biodiffusion	67
5.3.1 Patlak's Model	72
5.3.2 The Fokker-Planck Equations	75
5.4 Application to Taxis	82
5.5 Simulation of Taxis	86
5.6 Advection-Diffusion Models for Biodiffusion	87
6. Some Examples of Animal Diffusion	90
6.1 Population Pressure and Dispersal	90
6.2 Horizontal and Vertical Distributions of Insects in the Atmosphere: Insect Dispersal	92
6.2.1 Dispersal of Insects	92
6.2.2 Mathematical Models for Insect Dispersal	98
6.3 Diffusion Models for Homing and Migration of Animals	102
6.4 Model for Muskrat Dispersal	107
6.5 The Dispersal of Animal-Borne Plants	109
7. The Dynamics of Animal Grouping	110
7.1 Physical Distinction Between Diffusion and Grouping	110
7.2 Formulation of Swarming by a Generalized Diffusion Equation	113
7.3 Insect Swarming	114
7.4 Fish Schooling	118
7.5 Simulation Model for Animal Grouping	123
7.6 The Split and Amalgamation of Herds	125
7.7 The Ecological or Evolutional Significance of Grouping	128
8. Animal Movements in Home Range	132
8.1 The Size of the Home Range and its Relation to Animal Weight and Energy Requirements	132
8.2 Mathematical Models for Animal Dispersal in Home Ranges	133
8.3 Simulation of Animal Movement in Home Ranges	135
8.4 Animal Dispersal and Settling in New Home Ranges	140
8.5 Strategies of Movement for Resource Utilization	145
9. Patchy Distribution and Diffusion	151
9.1 Role of Diffusion in Plankton Patchiness	152
9.2 Spectra of Turbulence and Patchiness	155
9.3 Plankton Distribution in Convection Cells	160
9.4 Bioconvection	164
9.5 Diffusion and the Entropy of Patchiness	166

10. Population Dynamics in Temporal and Spatial Domains	169
10.1 Mathematical Representation of Intra- and Inter-Specific Interactions in Temporal and Spatial Domains: Advection-Diffusion-Reaction Equations	169
10.2 Single-Species Population Dynamics with Dispersal	172
10.2.1 Some Simple Population Models and Associated Traveling Frontal Waves	172
10.2.2 The Critical Size Problem	175
10.2.3 Population Balance with Diffusion and Direct Immigration- Emigration: Invasion and Settlement of New Species	179
10.3 Two- and Multi-Species Population Dynamics with Dispersal	183
10.3.1 Lotka-Volterra Predator-Prey Model	183
10.3.2 Traveling Waves	186
10.3.3 The Effect of Cross-Diffusion	191
10.3.4 The Effect of Advective Flow on Predator-Prey Systems	192
10.4 The Effect of Density-Dependent Dispersal on Population Dynamics	194
10.5 The Effect of Dispersal on Competing Populations	200
10.6 Pattern-Developing Instability in Diffusion-Reaction Systems: The Development of Patchiness	203
10.7 Nonlinear Stability Analysis for Diffusion-Reaction Systems	212
10.8 Models for Age-Dependent Dispersal	217
