

## CONTENTS

|   | Page |
|---|------|
| Preface .....   | 3    |
| Chapter I: Introduction .....   | 5    |
| 1.1 The Nature of the Problem .....   | 5    |
| 1.2 The Problem of Description .....  | 6    |
| 1.3 The Nature of the Subject .....   | 8    |
| 1.4 The Nature of the Course .....  | 9    |
| Bibliography for Chapter I .....  | 11   |
| Chapter II Description I: Probability .....                                   | 13   |
| 2.1 Probability .....   | 13   |
| 2.2 Continuous Probability Distribution ....                                  | 14   |
| 2.3 Expectation .....   | 15   |
| 2.4 Types of Probability Density Functions .                                  | 17   |
| 2.5 Gaussian Density Function .....   | 17   |
| 2.6 Tabulation .....  | 19   |
| 2.7 Probability in Relation to Random Pro-<br>cesses .....                    | 20   |
| 2.8 Stationary Random Process .....   | 21   |
| 2.9 Ergodic Random Process .....  | 22   |
| 2.10 Time Averages for Ergodic Process .....                                  | 23   |
| 2.11 Autocorrelation Function .....   | 24   |
| Bibliography for Chapter II .....   | 26   |
| Chapter III Description II: Spectral Density .....                            | 27   |
| 3.1 Frequency Analysis .....  | 27   |
| 3.2 Fourier Series .....  | 27   |
| 3.3 Fourier Integral .....  | 29   |
| 3.4 Mean Values in Terms of Fourier Trans-<br>form and Spectral Density ..... | 31   |
| 3.5 Spectral Density .....  | 33   |

|   | Page      |
|---|-----------|
| Bibliography for Chapter III .....  | 34        |
| <b>Chapter IV Vibration Theory I: Receptance .....</b>                          | <b>35</b> |
| 4.1 Forced Vibration of a Damped System Having One Degree of Freedom .....      | 35        |
| 4.2 Receptance .....  | 37        |
| 4.3 Quality Factor .....  | 39        |
| 4.4 Receptance in Composite System .....  | 43        |
| <b>Chapter V Vibration Theory II: Impulsive Receptance ....</b>                 | <b>45</b> |
| 5.1 Introduction .....  | 45        |
| 5.2 Response to Deterministic Excitation<br>Sampled Data .....                  | 46        |
| 5.3 Response to Deterministic Excitation. Continuous Data .....                 | 47        |
| 5.4 $w(t)$ and $a(if)$ are Fourier Transform Pair                               | 50        |
| 5.5 Examples of Relations 5.4 (10,11) .....                                     | 51        |
| <b>Chapter VI Description III: Autocorrelation Function ...</b>                 | <b>56</b> |
| 6.1 Autocorrelation and Spectral Density ....                                   | 56        |
| 6.2 Examples of Spectral Density .....  | 58        |
| 6.3 Sinusoidal Function .....   | 58        |
| 6.4 General Periodic Function .....   | 59        |
| 6.5 Square Wave .....   | 60        |
| 6.7 Specified Autocorrelation Function .....                                    | 62        |
| 6.8 Uniform Spectral Density .....  | 63        |
| <b>Chapter VI Appendix</b>  |           |
| 6. App. 1 Summary of Relation between Characteristics of Random Processes ..... | 65        |
| 6. App. 2 Unit Impulse Function .....   | 66        |
| 6. App. 3 Table of Fourier Transform<br>(Double Infinite Integral) .....        | 67        |
| <b>Chapter VII Random Vibration Response I: General Relationships .....</b>     | <b>68</b> |
| 7.1 Introduction .....  | 68        |

|   | Page |
|---|------|
| 7.2 Response of Linear System to Random Input                         | 68   |
| 7.3 Mean and Variance .....   | 70   |
| 7.4 Random Input to First Order Mechanical<br>System .....            | 72   |
| 7.5 Random Input to Second Order Mechanical<br>System .....           | 74   |
| Chapter VIII Vibration Theory III: Normal Modes .....                 | 77   |
| 8.1 Introduction .....  | 77   |
| 8.2 Orthogonality .....   | 80   |
| 8.3 Normal Coordinates .....  | 85   |
| Chapter IX Random Vibration Response II: Simple Examples              | 87   |
| 9.1 System with Two Degrees of Freedom .....                          | 87   |
| 9.2 Use of Normal Modes of Vibration .....                            | 89   |
| 9.3 Uniform Simply Supported Beam .....                               | 90   |
| 9.4 Derivatives of Random Functions .....                             | 92   |
| Chapter X Random Vibration Response III: Cross-correla-<br>tion ..... | 96   |
| 10.1 Cross-correlation .....  | 96   |
| 10.2 Response to Two Forces .....                                     | 98   |
| 10.3 Response to Multiple Excitation .....                            | 99   |
| 10.4 Response to Distributed Excitation .....                         | 99   |
| 10.5 Response in Terms of Normal Modes .....                          | 100  |
| Bibliography for Chapter X .....                                      | 102  |
| Chapter XI Applications I: Vehicle Response .....                     | 103  |
| 11.1 Introduction .....   | 103  |
| 11.2 Response to Profile Excitation .....                             | 103  |
| 11.3 Simple Model, Single Input .....                                 | 105  |
| 11.4 Two Input Problem .....  | 107  |
| 11.5 Calculation of Response - Practical Exam-<br>ple .....           | 110  |
| Bibliography for Chapter XI .....                                     | 113  |

|   | Page |
|---|------|
| Chapter XII Description IV: Further Topics in Probability                         | 114  |
| 12.1 Characteristic Functions of Probability Distributions .....                  | 114  |
| 12.2 Probability Distribution of Sum of Two Random Functions .....                | 116  |
| 12.3 Joint Probability Density .....  | 118  |
| 12.4 Poisson Probability Distribution .....                                       | 121  |
| 12.5 Estimation of Parameters from a Sample ...                                   | 123  |
| Chapter XIII Applications II: Failure Due to Random Vibration I .....             | 127  |
| 13.1 Response and Failure .....   | 127  |
| 13.2 Peak Distribution .....  | 128  |
| 13.3 Peak Distribution for Gaussian Process ...                                   | 130  |
| 13.4 Peak Distribution and Structural Failure .                                   | 132  |
| Chapter XIV Applications III: Failure Due to Random Vibration 2 .....             | 135  |
| 14.1 Introduction .....   | 135  |
| 14.2 Probabilistic Models for Stage I .....                                       | 136  |
| 14.3 Experimental Aspects .....   | 142  |
| Bibliography for Chapter XIV .....  | 147  |
| Chapter XV Applications IV: Simulation .....                                      | 148  |
| 15.1 The Problem .....  | 148  |
| 15.2 Response in Terms of Normal Modes .....                                      | 149  |
| 15.3 Simulation .....   | 151  |
| 15.4 Approximate Simulation .....   | 153  |
| 15.5 Practical Considerations .....   | 156  |
| Bibliography for Chapter XV .....   | 158  |
| Chapter XVI Computation: Evaluation of Frequency Spectra by Digital Methods ..... | 159  |
| 16.1 Introduction .....   | 159  |
| 16.2 Discrete Data .....  | 160  |

---

|   | Page |
|---|------|
| 16.3 Standard Method or Blackman-Tukey Method of Spectral Analysis .....      | 162  |
| 16.4 Direct Method Using the Fast Fourier Transform of Cooley and Tukey ..... | 166  |
| Chapter XVI Appendix: The Fast Fourier Transform Algorithm .....              | 169  |
| Bibliography for Chapter XVI .....  | 171  |
| Chapter XVII Applications VI: Analysis of Random Data .                       | 172  |
| 17.1 Introduction .....   | 172  |
| 17.2 Estimation of Time Averages .....  | 177  |
| 17.3 Estimation of Amplitude Distribution ...                                 | 182  |
| 17.4 Estimation of Correlation Functions ....                                 | 186  |
| 17.5 Estimation of Power Spectra .....  | 189  |
| Bibliography for Chapter XVII .....   | 194  |
| Bibliography .....  | 195  |
| Contents .....  | 215  |
