

PREFACE	ix
CONTENTS OF VOLUME I	xi

## CHAPTER 1. Analytic Techniques and Solutions

1.0	Introduction	1
1.1	Nonlinear Superposition Principles	2
1.2	Generation of Nonlinear Equations with Built-in Solutions	4
1.3	Employing the Wrong Equation to Find the Right Solution	14
1.4	Application of the Quasi-Linear Theory	18
1.5	Earnshaw's Procedure	21
1.6	Traveling-Wave Solutions	25
1.7	Arbitrary Functions	27
1.8	Equation Splitting	29
1.9	Inversion of Dependent and Independent Variables	32
1.10	Contact Transformations	34
1.11	Parametrization and the Legendre Transformation	38
1.12	Bäcklund Transformations	41
1.13	An Example Bäcklund Transformation	44
1.14	First Integrals	49
1.15	Development of First Integrals	53
1.16	Lagrange Series Solutions	57
1.17	Breakdown Theory of Jeffrey-Lax	59
1.18	Application of the Jeffrey-Lax Method	70
1.19	Dynamics of Moving Threadline	73
1.20	Ballooning Vibration of a Moving Threadline	77
	References	84

## CHAPTER 2. Applications of Modern Algebra

2.0	Introduction	87
2.1	The Similarity Method of Morgan	88
2.2	Application of the Morgan Method	91
2.3	Determination of Groups by Finite Transformations	96
2.4	Incorporation of the Auxiliary Conditions	105
2.5	Determination of Absolute Invariants	107
2.6	Example of Deductive Similarity Method	110
2.7	Similarity Formalism with Multiparameter Groups	118
2.8	Infinitesimal Transformations	124
2.9	Classical Determination of Infinitesimal Transformations	127
2.10	Nonclassical Determination of Infinitesimal Transformations	130
2.11	The Nonclassical Method and Simultaneous Equations	134
2.12	Some Similarity Literature	135
2.13	Transformation of Boundary-Value Problems into Initial-Value Problems— Single Equations	136
2.14	Transformation of Boundary-Value Problems into Initial-Value Problems— Simultaneous Equations	140
	References	142

**CHAPTER 3. Approximate Methods**

3.0	Introduction	146
3.1	Weighted Residual Methods (WRM)	147
3.2	Novel Applications of WRM in Fluid Mechanics	150
3.3	WRM in Transport Phenomena—Some Recent Literature	155
3.4	WRM in Dynamics and Solid Mechanics	168
3.5	Comments on WRM Theory	178
3.6	Maximum Principles—Ordinary Differential Equations	180
3.7	Maximum Principles—Partial Differential Equations	183
3.8	Quasi Linearization	187
3.9	Regular Perturbation and Irregular Domains	189
3.10	Classical Regular Perturbation	191
3.11	The Perturbation Method of Keller <i>et al.</i>	201
3.12	Singular Perturbation	205
3.13	Lighthill's Method of Strained Coordinates	210
3.14	Miscellaneous Asymptotic Procedures	213
	References	216

**CHAPTER 4. Numerical Methods**

4.0	Introduction	223
	<b>A. Finite Elements</b>	224
4.1	Introduction to Finite Elements	224
4.2	Formulation of Finite Element Characteristics	226
4.3	Theoretical Comments on Displacement Functions	234
4.4	Additional Elements in Two and Three Dimensions	235
4.5	Finite Elements and Field Problems	239
4.6	Finite Elements and Nonlinear Problems	243
	<b>B. Numerical Solutions in Fluid Mechanics</b>	249
4.7	Preliminary Remarks	249
4.8	Finite Elements and Unsteady Flow	249
4.9	Stream Function—Vorticity Techniques	256
4.10	Primitive Variable Methods	261
4.11	Vector Potential Methods	267
	<b>C. Some New Directions</b>	274
4.12	Introductory Remarks	274
4.13	Predictor–Corrector Methods	275
4.14	Functional Methods	277
4.15	Reformulation in New Independent Variables	281
	References	284
