Contents

1 Introduction 1

2 Preliminaries 9
- 2.1 Sobolev Spaces . . . 9
- 2.2 Classical Formulations . . . 12
  - 2.2.1 Maxwell Equations . . . 12
  - 2.2.2 Cauchy-Navier Equations . . . 14
  - 2.2.3 Coupled Field Problems . . . 14
- 2.3 Primal Variational Formulation . . . 15
- 2.4 Finite Element Method . . . 18
- 2.5 Iterative Solvers . . . 20

3 General Approach to AMG Methods 25
- 3.1 Motivation for AMG Methods . . . 25
- 3.2 Components of an AMG Method . . . 26
  - 3.2.1 Auxiliary Matrix ('virtual' FE-mesh) . . . 26
  - 3.2.2 Coarsening Process . . . 29
  - 3.2.3 Prolongation Operators . . . 30
  - 3.2.4 Smoother and Coarse Grid Operator . . . 32
- 3.3 Routines and Algorithms . . . 33
- 3.4 Convergence Theory and Limitations . . . 36

4 Special Algebraic Multigrid Methods 41
- 4.1 Symmetric $H^1(\Omega)$-based Equations . . . 41
- 4.2 Symmetric $(H^1(\Omega))^p$-based Equations . . . 43
- 4.3 Symmetric $H(\mathrm{curl}, \Omega)$-based Equations . . . 44

5 Element Preconditioning Technique 49
- 5.1 Motivation . . . 49
- 5.2 Basic Concept . . . 49
- 5.3 Optimization Procedure . . . 51
- 5.4 Classification Strategy . . . 59

6 A Parallel Version of AMG 61
- 6.1 A Unified Data Distribution Concept . . . 61
  - 6.1.1 Notations . . . 61

6.1.2 Vector and Matrix Types 62
6.1.3 Basic Operations 63
6.1.4 Basic Algorithms 64
6.2 The Parallel AMG Algorithm and Its Implementation 65
6.2.1 Communication Groups and Node Sets 65
6.2.2 Parallel Coarsening 67
6.2.3 Coarse Grid Matrix and Parallel Setup 68
6.2.4 Object Oriented Approach 68

7 AMG Software Package PEBBLES **71**
7.1 Requirements and Implementation 71
7.2 Setup Phase 73
7.2.1 General Relations 73
7.2.2 Special Examples 75
7.3 Applications 77

8 Numerical Studies **79**
8.1 Symmetric $H^1(\Omega)$-based Equations 80
8.1.1 Element Preconditioning Studies 80
8.1.2 Anisotropic Studies with an Auxiliary Matrix 84
8.1.3 Nonlinear Studies 85
8.1.4 Coupled Field Problems 89
8.1.5 Inverse Source Reconstruction 91
8.2 Symmetric $(H^1(\Omega))^p$-based Equations 93
8.2.1 Linear Elasticity Problems 93
8.2.2 Magnetic Field Equations in 3D with Nodal Elements 95
8.3 Symmetric $H(\mathrm{curl}, \Omega)$-based Equations 98
8.3.1 Magnetic Field Equations in 3D with Edge Elements 98
8.3.2 FIT Discretization 100
8.4 Parallel Results 102
8.4.1 Symmetric $H^1(\Omega)$-based Equations 102
8.4.2 Symmetric $H(\mathrm{curl}, \Omega)$-based Equations 104
8.5 Other Comparisons 106
