

Contents of Volume I

Preface	ix
1 Introduction	1
PART I. DETERMINISTIC PROBLEMS	
2 The optimality equation and state structure in the deterministic case	17
3 Deterministic examples	25
4 Deterministic dynamic models	44
5 Linear/quadratic models	59
6 The discrete maximum principle	82
7 The continuous maximum principle; concepts and examples	103
8 The continuous maximum principle; derivation	127
9 The minimax criterion	135
PART II. THE STOCHASTIC FORMULATION	
10 The general optimality equation	149
11 Markov decision processes (finite horizon)	158
12 Examples	165
13 Inventory and storage problems	193
14 Sequential scheduling and the multi-armed bandit	210

15	Structure theorems	233
16	Duality concepts	238

PART III. LINEAR/QUADRATIC/GAUSSIAN MODELS

17	LQG control with incomplete state observation	249
18	State estimation with linear structure	257
19	Risk-sensitive LQG control	268
20	LQG homing	280
21	LQG control by spectral methods	295
	Bibliography	311
	Index	315

Contents of Volume II
