Preface vii

0. The Applied Setting 1

0.1 Introduction, 1
0.2 A Data Set and Some Examples, 2

1. The Counting Process and Martingale Framework 15

1.1 Introduction, 15
1.2 Stochastic Processes and Stochastic Integrals, 15
1.3 The Martingale $M = N - A$, 25
1.4 The Doob-Meyer Decomposition: Applications to Quadratic Variation, 31
1.5 The Martingale Transform $\int H dM$, 42
1.6 Bibliographic Notes, 48

2. Local Square Integrable Martingales 51

2.1 Introduction, 51
2.2 Localization of Stochastic Processes and the Doob-Meyer Decomposition, 52
2.3 The Martingale $N - A$ Revisited, 60
2.4 Stochastic Integrals with Respect to Local Martingales, 65
2.5 Continuous Compensators, 74
2.6 Compensators with Discontinuities, 79
2.7 Summary, 83
2.8 Bibliographic Notes, 88

3. Finite Sample Moments and Large Sample Consistency of Tests and Estimators 89

3.1 Introduction, 89

3.2 Nonparametric Estimation of the Survival Distribution, 91
3.3 Some Finite Sample Properties of Linear Rank Statistics, 107
3.4 Consistency of the Kaplan-Meier Estimator, 112
3.5 Bibliographic Notes, 121

4. Censored Data Regression Models and Their Application **125**

4.1 Introduction, 125
4.2 The Proportional Hazards and Multiplicative Intensity Models, 126
4.3 Partial Likelihood Inference, 136
4.4 Applications of Partial Likelihood Methods, 153
4.5 Martingale Residuals, 163
4.6 Applications of Residual Methods, 178
4.7 Bibliographic Notes, 197

5. Martingale Central Limit Theorem **201**

5.1 Preliminaries and Motivation, 201
5.2 Convergence of Martingale Difference Arrays, 205
5.3 Weak Convergence of the Process, $U^{(n)}$, 215
5.4 Bibliographic Notes, 228

6. Large Sample Results of the Kaplan-Meier Estimator **229**

6.1 Introduction, 229
6.2 A Large Sample Result for Kaplan-Meier and Weighted Logrank Statistics, 229
6.3 Confidence Bands for the Survival Distribution, 235
6.4 Bibliographic Notes, 252

7. Weighted Log Rank Statistics **255**

7.1 Introduction, 255
7.2 Large Sample Null Distribution, 256
7.3 Consistency of Tests of the Class $\mathcal{K}$, 265
7.4 Efficiencies of Tests of the Class $\mathcal{K}$, 267
7.5 Some Versatile Test Procedures, 277
7.6 Bibliographic Notes, 284

8. Distribution Theory for Proportional Hazards Regression **287**

8.1 Introduction, 287
8.2 The Partial Likelihood Score Statistic, 289

8.3 Estimators of the Regression Parameters and the Cumulative Hazard Function, 296
8.4 The Asymptotic Theory for Simple Models, 303
8.5 Asymptotic Relative Efficiency of Partial Likelihood Inference in the Proportional Hazards Model, 311
8.6 Bibliographic Notes, 316

Appendix A. Some Results from Stieltjes Integration and Probability Theory 317

Appendix B. An Introduction to Weak Convergence 331

Appendix C. The Martingale Central Limit Theorem: Some Preliminaries 343

Appendix D. Data 359

Appendix E. Exercises 385

Bibliography 401

Notation 413
