

Table of Contents

Author's Preface	7
Glossary of Symbols	11

Chapter 1 The Name of the Game

1.1 Introduction.	15
1.2 Extensive forms and pure strategies.	17
1.3 Normal forms and saddle points.	22
1.4 Mixed strategies and the minimax theorem.	31
1.5 Dominance of strategies	34
1.6 $2 \times n$ and symmetric games.	38
1.7 Other kinds of 2-person zero sum games	47
Problems	55
References	59

Chapter 2 Non-cooperative Games

2.1 Extensive forms and equilibrium n -tuples.	61
2.2 Normal forms and mixed strategy equilibria	68
2.3 Discussion of equilibria.	76
2.4 Preliminary results for 2-person zero sum game	78
2.5 The minimax theorem for matrix games.	83
2.6 Properties of matrix games	90
2.7 Simplified 2-person poker	98
2.8 Continuous games on the unit square	103
Problems	110
References	115

Chapter 3 Linear Programming and Matrix Games

3.1 Introduction.	117
3.2 Preliminary results.	123
3.3 Duality theory	127

3.4	The geometric situation	134
3.5	Extreme points of the feasible region	140
3.6	The Shapely-Snow procedure for games.	143
3.7	Mixed constraints, slack variables, and the tableau	153
3.8	The pivot operation	157
3.9	Artificial variables	163
	Problems	172
	References	174
Chapter 4 Cooperative Games		
4.1	Utilities and scales of measurement	177
4.2	Characteristic functions	181
4.3	Imputations	190
4.4	Strategic equivalence	194
4.5	Dominance of imputations	198
4.6	Von Neumann-Morgenstern solutions	203
4.7	The Edgeworth trading model	210
4.8	The Shapley value	217
	Problems	221
	References	223
Chapter 5 Bargaining Models		
5.1	Introduction.	225
5.2	Graphical representation of games and status quo points.	226
5.3	The Nash bargaining model	230
5.4	The threat game	237
5.5	Shapley and Nash solutions for bimatrix games	241
5.6	Other bargaining models	249
	Problems	253
	References	254
	Appendix I Fixed Point Theorems	255
	References	256
	Appendix II Some Poker Terminology	257
	References	259
Solutions to Problems		
	Chapter 1.	261
	Chapter 2.	277
	Chapter 3.	291
	Chapter 4.	297
	Chapter 5.	301
	Index	307
