<b>CHAPTER 1</b>	<b>MATHEMATICAL MODELS</b>	<b>1</b>
Section 1.1	Applying Mathematics	1
Section 1.2	The Diet Problem	2
Section 1.3	The Prisoner's Dilemma	5
Section 1.4	The Roles of Linear Programming and Game Theory	8
<b>CHAPTER 2</b>	<b>THE LINEAR PROGRAMMING MODEL</b>	<b>9</b>
Section 2.1	History	9
Section 2.2	The Blending Model	10
Section 2.3	The Production Model	18
Section 2.4	The Transportation Model	27
Section 2.5	The Dynamic Planning Model	30
Section 2.6	Summary	37
<b>CHAPTER 3</b>	<b>THE SIMPLEX METHOD</b>	<b>45</b>
Section 3.1	The General Problem	45
Section 3.2	Linear Equations and Basic Feasible Solutions	51
Section 3.3	Introduction to the Simplex Method	60
Section 3.4	Theory of the Simplex Method	64
Section 3.5	The Simplex Tableau and Examples	72
Section 3.6	Artificial Variables	79
Section 3.7	Redundant Systems	86
Section 3.8	A Convergence Proof	91
Section 3.9	Linear Programming and Convexity	95

<b>CHAPTER 4</b>	<b>DUALITY</b>	<b>100</b>
Section 4.1	Introduction to Duality	100
Section 4.2	Definition of the Dual Problem	103
Section 4.3	Examples and Interpretations	110
Section 4.4	The Duality Theorem	116
Section 4.5	The Complementary Slackness Theorem	127
<b>CHAPTER 5</b>	<b>SENSITIVITY ANALYSIS</b>	<b>133</b>
Section 5.1	Examples in Sensitivity Analysis	133
Section 5.2	Matrix Representation of the Simplex Algorithm	145
Section 5.3	Changes in the Objective Function	153
Section 5.4	Addition of a New Variable	157
Section 5.5	Changes in the Constant Term Column Vector	160
Section 5.6	The Dual Simplex Algorithm	163
Section 5.7	Addition of a Constraint	171
<b>CHAPTER 6</b>	<b>INTEGER PROGRAMMING</b>	<b>176</b>
Section 6.1	Introduction to Integer Programming	176
Section 6.2	Models with Integer Programming Formulations	179
Section 6.3	Gomory's Cutting Plane Algorithm	194
Section 6.4	A Branch and Bound Algorithm	203
<b>CHAPTER 7</b>	<b>THE TRANSPORTATION PROBLEM</b>	<b>211</b>
Section 7.1	A Distribution Problem	211
Section 7.2	The Transportation Problem	225
Section 7.3	Applications	244
<b>CHAPTER 8</b>	<b>OTHER TOPICS IN LINEAR PROGRAMMING</b>	<b>260</b>
Section 8.1	An Example Involving Uncertainty	260
Section 8.2	An Example with Multiple Goals	267
Section 8.3	An Example Using Decomposition	274
Section 8.4	Efficiency of the Simplex Method	286

<b>CHAPTER 9</b>	<b>TWO-PERSON, ZERO-SUM GAMES</b>	<b>289</b>
Section 9.1	Introduction to Game Theory	289
Section 9.2	Some Principles of Decision Making in Game Theory	297
Section 9.3	Saddle Points	302
Section 9.4	Mixed Strategies	306
Section 9.5	The Fundamental Theorem	313
Section 9.6	Computational Techniques	322
Section 9.7	Games People Play	334
<b>CHAPTER 10</b>	<b>OTHER TOPICS IN GAME THEORY</b>	<b>342</b>
Section 10.1	Utility Theory	342
Section 10.2	Two-Person, Non-Zero-Sum Games	344
Section 10.3	Noncooperative Two-Person Games	348
Section 10.4	Cooperative Two-Person Games	353
Section 10.5	The Axioms of Nash	358
Section 10.6	An Example	364
<b>APPENDIXES</b>		<b>367</b>
Appendix A	Vectors and Matrices	367
Appendix B	Programming the Simplex Method	371
Appendix C	An Example of Cycling	375
<b>BIBLIOGRAPHY</b>		<b>377</b>
<b>SOLUTIONS TO SELECTED PROBLEMS</b>		<b>381</b>
<b>INDEX</b>		<b>393</b>
