Chapter 1  THE TRANSPORTATION PLANNING PROCESS ......................... 1
  1.1. Goal formulation, generation and evaluation of alternatives .................. 1
  1.2. Descriptive approaches ...................................... 3
  1.3. Optimizing approaches ..................................... 5
  1.4. Welfare theory and measures of efficiency ...................... 5
  1.5. The use of existing traffic patterns in the planning process ......................... 6
  1.6. Outline of the paper ...................................... 12

PART I  ON ENTROPY

Chapter 2  ENTROPY AS A MEASURE OF DISPERSION ............................. 17
Chapter 3  SOME COMMENTS UPON ENTROPY MAXIMIZING ....................... 25

PART II  THE DOUBLY CONSTRAINED TRIP DISTRIBUTION PROBLEM

Chapter 4  A MODEL FOR THE CONSTRAINTS .................................. 29
Chapter 5  THE OBJECTIVE FUNCTION AND OUR MINIMIZATION PROBLEM ............ 33
Chapter 6  THE GRAVITY MODEL AS THE OPTIMAL SOLUTION OF THE ENTROPY CONSTRAINED AGGREGATE LINEAR PROGRAM ............................ 35
Chapter 7  SENSITIVITY AND THE DUAL PROGRAM ................................ 55
Chapter 8  INTERACTIVITY AND ENTROPY .................................... 65
Chapter 9  BENEFIT MEASURES AND THE GRAVITY MODEL .......................... 69

PART III  MODAL SPLIT AND ASSIGNMENT

Chapter 10 MODAL SPLIT ............................................... 73
Chapter 11 ASSIGNMENT TO THE NETWORK .................................. 77

PART IV  MAXIMIZING TOTAL UTILITY

Chapter 12 AN UTILITY APPROACH TO THE ORIGINAL TRIP DISTRIBUTION PROBLEM ........................................... 81
Chapter 13 ENTROPY CONSTRAINED AGGREGATE LINEAR PROGRAM .............. 91
REFERENCES ...................................................... 97
INDEX ......................................................... 103
