FOREWORD	vii
--------------------	-----

1 *Theory of Maxima and Minima*

THEODORE N. EDELBAUM

1.1 Necessary Conditions for Maxima or Minima	2
1.2 Sufficient Conditions for Maxima or Minima	4
1.3 Subsidiary Conditions	7
1.4 Application to Integrals	12
1.5 Remarks on Practical Application	16
1.6 Optimization of Low Thrust Trajectories and Propulsion Systems for a 24-Hour Equatorial Satellite	19
References	31

2 *Direct Methods*

FRANK D. FAULKNER

2.0 Introduction and Summary	33
2.1 A Routine for Determining Some Optimum Trajectories	35
2.2 Elementary Graphic Solution	52
2.3 Optimum Thrust Programming along a Given Curve	59
References	65

3 *Extremization of Linear Integrals by Green's Theorem*

ANGELO MIELE

3.1 Introduction	69
3.2 Linear Problem	70
3.3 Linear Isoperimetric Problem	76
3.4 Linear Problems in Flight Mechanics	77
3.5 Optimum Burning Program for a Short-Range, Nonlifting Missile	79
3.6 Optimum Drag Modulation Program for the Re-Entry of a Variable-Geometry Ballistic Missile	88
References	98

4 *The Calculus of Variations in Applied Aerodynamics and Flight Mechanics*

ANGELO MIELE

4.1	Introduction	100
4.2	The Problem of Bolza	100
4.3	Transformation of Variational Problems	109
4.4	The Calculus of Variations in Applied Aerodynamics	112
4.5	Bodies of Revolution Having Minimum Pressure Drag in Newtonian Flow	113
4.6	Wings Having Minimum Pressure Drag in Linearized Supersonic Flow	120
4.7	The Calculus of Variations in Flight Mechanics	126
4.8	Optimum Trajectories for Rocket Flight in a Vacuum	127
4.9	Optimum Trajectories for Rocket Flight in a Resisting Medium	143
4.10	Conclusions	163
	References	163

5 *Variational Problems with Bounded Control Variables*

G. LETTMANN

5.0	Introduction	172
5.1	Statement of the Problem	172
5.2	Mass Flow Rate Limited Systems	174
5.3	Propulsive Power Limited Systems	182
5.4	Thrust Acceleration Limited Systems	186
5.5	Conclusions	192
5.6	Example	193
	Nomenclature	200
	Appendix	201
	References	203

6 *Methods of Gradients*

HENRY J. KELLEY

6.0	Introduction	206
6.1	Gradient Technique in Ordinary Minimum Problems	206
6.2	Gradient Technique in Flight Path Optimization Problems	216
6.3	Solar Sailing Example	233
6.4	Low-Thrust Example	241
6.5	Remarks on the Relative Merits of Various Computational Techniques	246
6.6	A Successive Approximation Scheme Employing the Min Operation	248
	Appendix A	251
	References	252

7 *Pontryagin Maximum Principle*

RICHARD E. KOPP

7.0	Introduction	255
7.1	An Introduction to the Pontryagin Maximum Principle	256
7.2	The Adjoint System and the Pontryagin Maximum Principle	262
7.3	The Calculus of Variations and the Pontryagin Maximum Principle	264
7.4	Dynamic Programming and the Pontryagin Maximum Principle	271
7.5	Examples	274
	References	278

8 *On the Determination of Optimal Trajectories Via Dynamic Programming*

RICHARD BELLMAN

8.1	Introduction	281
8.2	Dynamic Programming	282
8.3	One-Dimensional Problems.	282
8.4	Constraints.	283
8.5	Constraints—II	283
8.6	Discussion	284
8.7	Two-Dimensional Problems	285
8.8	One-Dimensional Case	286
8.9	Discussion	288
8.10	Two-Dimensional Case	289
8.11	Discussion	290
	References	290

9 *Computational Considerations for Some Deterministic and Adaptive Control Processes*

ROBERT KALABA

9.1	Introduction.	291
9.2	Some Deterministic Control Processes	292
9.3	Adaptive Control Processes	305
	References	308

10 *General Imbedding Theory*

C. M. KASHMAR AND E. L. PETERSON

10.1	Introduction	311
10.2	Problem Formulation	312
10.3	Elimination of Boundary Valuedness	313

10.4	Reduction to Final Value Problem	314
10.5	The Classical Solution	316
10.6	The Dynamic Programming Solution	318
10.7	Summary	321
	References	321

11

Impulsive Transfer between Elliptical Orbits

DEREK F. LAWDEN

11.1	Introduction	323
11.2	Impulsive Change in Orbital Elements	324
11.3	Dependence of Impulse on Orbital Elements	328
11.4	Optimal n -Impulse Transfer between Two Terminal Orbits	331
11.5	Optimal Two-Impulse Transfer	333
11.6	Optimal Slewing of the Orbital Axis	334
11.7	Transfer between Orbits Whose Axes Are Aligned	341
11.8	Appendix	349
	References	350

12 *The Optimum Spacing of Corrective Thrusts in Interplanetary Navigation*

JOHN BREAKWELL

12.1	Discussion and Results	353
12.2	Development of the Optimum Spacing in Example 1	363
12.3	Development of the Optimum Spacing in Example 2	365
12.4	The Covariance of D_n and D_{n+1} in the Case of Frequent Observations Since Launch; One-Dimensional Model	369
12.5	Estimation of D from Frequent Position Measurements since the Last Correction; One-Dimensional Model	371
	Nomenclature	373
	General References	375

13

Propulsive Efficiency of Rockets

G. LEITMANN

13.0	Introduction	377
13.1	Propulsive Efficiency—Point Function	378
13.2	Propulsive Efficiency—Interval Function	381
	Nomenclature	387
	References	387
