

Foreword	by Mary M. Lindquist	ix
Acknowledgments		xi
Introduction		xiii
1	<i>Children's Mathematical Thinking</i>	1
	Modeling the Action and Relations in Problems	1
	Using Counting Strategies and Derived Number Facts	3
	Doing What Comes Naturally	3
	Looking Ahead	4
2	<i>Addition and Subtraction: Problem Types</i>	7
	Join Problems	7
	Separate Problems	8
	Part-Part-Whole Problems	8
	Compare Problems	9
	Number Sentences: Another Perspective on Problem Types	10
	Other Considerations	10
	Summary	12
3	<i>Addition and Subtraction: Children's Solution Strategies</i>	15
	Direct Modeling Strategies	15
	Counting Strategies	18
	Distinction Between Counting and Modeling Strategies	22
	Number Facts	24
	Relation of Strategies to Problem Types	25
	Levels of Development of Strategies	26
	<i>Direct Modeling Strategies</i>	26
	<i>Counting Strategies</i>	28
	<i>Flexible Choice of Strategies</i>	28
	<i>Number Facts</i>	29
	Integration of Solution Strategies and Problem Types	30

4	<i>Multiplication and Division:</i>	
	<i>Problem Types and Children's Solution Strategies</i>	33
	<i>Grouping and Partitioning Problems</i>	33
	<i>Children's Strategies for Solving Multiplication,</i>	
	<i>Measurement Division, and Partitive Division Problems</i>	34
	<i>Direct Modeling Strategies</i>	35
	<i>Counting and Adding Strategies</i>	38
	<i>Derived Facts</i>	42
	<i>What to Do with What's Left Over</i>	43
	<i>Multiplication and Division Word Problems in the Primary Grades</i>	44
	<i>Other Multiplication and Division Problems</i>	45
	<i>Related Problems: Rate, Price, and Multiplicative</i>	
	<i>Comparison Problems</i>	46
	<i>Symmetric Problems: Area, Array, and Combination Problems</i>	49
5	<i>Problem Solving as Modeling</i>	55
6	<i>Multidigit Number Concepts</i>	59
	<i>Problem Contexts for Grouping by Ten</i>	59
	<i>Posing Word Problems</i>	59
	<i>Using Objects Grouped by Ten</i>	62
	<i>Children's Strategies for Solving Multidigit Problems</i>	63
	<i>Addition and Subtraction</i>	64
	<i>Multiplication and Division</i>	76
	<i>The Development of Multidigit Strategies</i>	79
	<i>Modeling with Base-Ten Materials</i>	79
	<i>Invented Algorithms</i>	80
	<i>Transitions</i>	81
	<i>Learning to Solve Problems with Multidigit Numbers</i>	82
7	<i>Beginning to Use Cognitively Guided Instruction</i>	85
	<i>Getting Started</i>	86
	<i>Organizing a Class for CGI Instruction</i>	87
	<i>Selecting Problems</i>	87
	<i>Reporting Strategies</i>	88
	<i>Learning About Your Students</i>	89
	<i>Seeing Change</i>	90
	<i>Using Tools and Manipulative Materials</i>	91
	<i>Beginning the Journey</i>	92
8	<i>CGI Classrooms</i>	95
	<i>Similarities of CGI Classrooms</i>	95
	<i>Basing the Curriculum on Problem Solving</i>	96
	<i>Communicating About Problem Solving</i>	98
	<i>Creating a Climate for Communication</i>	99
	<i>Teaching for Understanding</i>	99

The Role of the Teacher	101
<i>Understanding Students' Mathematical Thinking</i>	102
Planning for Instruction	103
<i>Using Knowledge of Children's Thinking</i>	103
<i>Encouraging Children's Mathematical Development</i>	104
Appendix: The Research Base for Cognitively Guided Instruction	105
Research on Children's Thinking	106
<i>Teachers' Knowledge and Beliefs About Children's Thinking</i>	106
<i>The Effect of Participating in CGI Professional Development</i>	
<i>Programs on Teachers' Knowledge, Beliefs, and Instruction</i>	107
<i>Student Achievement</i>	109
