

Contents

Preface	iii
Introduction	1
Part I Unconstrained Optimisation	3
1 Classical Methods	4
1.1 Functions of One Variable	4
1.2 Functions of n Variables	6
1.3 Newton's Method	7
2 Search Methods—Functions of One Variable	12
2.1 Introduction	12
2.2 Fibonacci Search	13
2.3 Golden Section Search	18
2.4 The Curve Fitting Approach	20
2.5 Quadratic Interpolation	20
2.6 Cubic Interpolation	24
2.7 References	28
3 Direct Search Methods—Functions of n Variables	31
3.1 Preliminary Discussion	31
3.2 The Method of Hooke and Jeeves	32
3.3 Nelder and Mead's Method	37
3.4 References	44
4 Gradient Methods	47
4.1 The Method of Steepest Descent	47
4.2 Quadratic Functions	55
4.3 The Davidon–Fletcher–Powell Method	58
4.4 The Fletcher–Reeves Method	67
4.5 References	75
Part II Constrained Optimisation	77
5 General Theory	78
5.1 Equality Constraints	78
5.2 Inequality Constraints	82
5.3 Convexity and Concavity	85
5.4 References	90

6	Search Methods	93
6.1	Modified Hooke and Jeeves	93
6.2	The Complex Method	98
6.3	References	106
7	Sequential Unconstrained Optimisation	108
7.1	Penalty Functions	108
7.2	The SUMT Method of Fiacco and McCormick	113
7.3	References	121
	Suggestions for Further Reading	123
	Solutions	124
	Index	127
