

CONTENTS

<i>Preface</i>	ix
<i>Notation and Symbols</i>	xi
1 INTRODUCTION	
2 MATHEMATICAL PRELIMINARIES	
2.1 Elements of Convex Analysis	6
2.2 Point-To-Set Maps	21
2.3 Preference Orders and Domination Structures	25
3 SOLUTION CONCEPTS AND SOME PROPERTIES OF SOLUTIONS	
3.1 Solution Concepts	32
3.2 Existence and External Stability of Efficient Solutions	47
3.3 Connectedness of Efficient Sets	66
3.4 Characterization of Efficiency and Proper Efficiency	70
3.5 Kuhn–Tucker Conditions for Multiobjective Programming	89
4 STABILITY	
4.1 Families of Multiobjective Optimization Problems	92
4.2 Stability for Perturbation of the Sets of Feasible Solutions	94
4.3 Stability for Perturbation of the Domination Structure	107
4.4 Stability in the Decision Space	119
4.5 Stability of Properly Efficient Solutions	122

5 LAGRANGE DUALITY

5.1	Linear Cases	127
5.2	Duality in Nonlinear Multiobjective Optimization	137
5.3	Geometric Consideration of Duality	148

6 CONJUGATE DUALITY

6.1	Conjugate Duality Based on Efficiency	167
6.2	Conjugate Duality Based on Weak Efficiency	190
6.3	Conjugate Duality Based on Strong Supremum and Infimum	201

7 METHODOLOGY

7.1	Utility and Value Theory	210
7.2	Stochastic Dominance	244
7.3	Multiobjective Programming Methods	252
