ABOUT THE PROJECT	ii
STEERING COMMITTEE	xi
FOREWORD	xiii
INTRODUCTION	1
SECTION 1: SPATIAL THINKING	5
1.1 Introduction: Space and Language – the Two Sides of the Brain	6
1.2 How Important is Spatial Thinking?	10
1.3 How do Spatial Concepts Develop?	12
1.3.1 Introduction	12
1.3.2 Piaget’s Theory	13
1.3.3 Criticisms of Piaget	15
1.3.4 The Van Hiele Levels	18
1.4 Level I Activities: Shape Recognition	19
1.5 Level II Activities: Developing an Awareness of the Properties of Shape	23
1.5.1 Fitting Shapes Together	23
1.5.2 Lines and Angles	25
1.6 How do Children form Misconceptions about Space?	29
1.7 2-Dimensional Representations of 3-Dimensional Space	37
1.8 The Development of Reference Systems	44
1.9 Conservation	49
1.10 Transformation Geometry	51
1.10.1 Introduction	51
1.10.2 Translations, Reflections and Rotations	53
1.10.3 Transformations and Figure Symmetry	65
1.10.4 Further Suggestions for Investigating Transformations	69

SECTION 2: MEASUREMENT	77
2.1 A General Introduction to Measurement	79
2.1.1 Introduction	79
2.1.2 The Approximating Nature of Measurement	80
2.1.3 What is Fundamental to the Measurement Process?	83
2.1.3.1 Conservation	83
2.1.3.2 Transitivity	83
2.1.4 What are the Stages of Development in the Child's Grasp of Measurement? – The Piagetian Position	84
2.1.4.1 Initial Stages	84
2.1.4.2 The Stage where Conservation and Transitivity Begin to Emerge	84
2.1.4.3 The Stage Characterised by the Onset of Operational Conservation and Transitivity	85
2.1.4.4 The Stage where the Idea of Smaller Units of Measure is Grasped	85
2.1.4.5 The Final Stage in the Development of Measurement Concepts	85
2.1.5 Summary and Appraisal of the Piagetian Position	86
2.1.6 The Unit of Measure	87
2.1.7 Children's Understanding of Standard Units of Measure	89
2.1.7.1 Familiarity with the Size of Standard Units	89
2.1.7.2 Relationships between Standard Units	90
2.1.8 The Relationship between Measurement and Number Concepts	91
2.1.8.1 The Distinction Between Counting and Measuring	91
2.1.8.2 The Piagetian Position	93
2.1.8.3 The Russian Approach	94
2.2 Length and Area	95
2.2.1 Length	95
2.2.1.1 Conservation of Length	95
2.2.1.2 Using a Scale for Measuring Length	97
2.2.1.3 Practical Measurement of Length and Estimation	100
2.2.1.4 Measuring Perimeter	101
2.2.1.5 Children's Performance on Non-Practical Perimeter Problems	102
2.2.2 Area	103
2.2.2.1 Conservation of Area	103
2.2.2.2 How Do Children Measure Area?	105
2.2.2.3 Children's Understanding of Area in Terms of Filling Space	106

2.2.2.4	How Difficult do Children find Typical Classroom Area Problems?	110
2.2.3	Confusion Between Area and Perimeter	112
2.3	The Measurement of Angles in Geometrical Constructions	115
2.3.1	The Child's Understanding of the Measurement of Angles	116
2.3.1.1	The Concept of an Angle	116
2.3.1.2	Estimating and Measuring Angles	117
2.3.1.3	Relations between Angles	118
2.3.2	Measurement in the Construction of Geometric Figures	120
2.4	Mass, Weight and Volume	122
2.4.1	Mass and Weight	122
2.4.1.1	Terminology	122
2.4.1.2	The Sequence of Concept Development	123
2.4.1.3	Conservation of Weight	124
2.4.1.4	Practical Studies Involving Balances	125
2.4.1.5	A Case-Study of Children with an Incomplete Understanding of the Concept of Weight	128
2.4.2	Volume and Capacity	130
2.4.2.1	Different Aspects of the Concepts of Volume and Capacity	130
2.4.2.2	What Difficulties do Children Experience with Occupied Volume?	131
2.4.2.3	The Child's Grasp of Internal Volume	135
2.4.2.4	Liquid Volume and Capacity	137
2.4.2.5	What Difficulties do Children Experience with the 'Displaced' Aspect of Volume?	140
2.4.2.6	Some Suggestions for a Scheme of Work Concerning Volume and Capacity	142
2.5	Time and Money	143
2.5.1	Time	143
2.5.1.1	The Distinction Between the 'Telling of Time' and the Concept of Time	143
2.5.1.2	How Does an Understanding of the Concept of Time Develop?	144
2.5.1.3	What are the Difficulties Children have with the Concept of Time?	147
2.5.1.4	What are the Problems with Telling the Time?	149
2.5.1.5	The Tabulation of Time	151
2.5.2	Money	152
2.5.2.1	Money and Measurement	152
2.5.2.2	Money in Everyday Life	153

	2.5.2.3	What Perceptual and Mathematical Skills are Needed?	155
	2.5.2.4	Money, Place Value and Decimals	159
	2.5.2.5	Teaching about Money	160
SECTION 3:		NUMBER	167
	3.1	Early Stages in the Development of Number Ideas	169
	3.1.1	Introduction: the Complexity of Number Ideas	169
	3.1.2	Schaeffer's Stage One: Pre-Counting Achievements	170
	3.1.3	Schaeffer's Stage Two: the Ordinal Aspect	173
	3.1.4	Schaeffer's Stage Three: the Cardinal Aspect	178
	3.1.5	Schaeffer's Stage Four: Relative Size of Numbers	179
	3.1.6	Implications for Teaching	179
	3.2	Co-ordination of the Cardinal and the Ordinal Aspects of Natural Number: Piaget's Experiments	181
	3.2.1	Piaget's Experiments relating to the Cardinal Aspect of Number: 'Conservation' of Number	181
	3.2.2	Piaget's Experiments relating to the Ordinal Aspect of Number: 'Seriation'	185
	3.2.3	Implications for Teaching	188
	3.3	Early Stages in the Development of the Ability to Add and Subtract	188
	3.3.1	Concrete Understanding: 3 to 5 Year Olds	188
	3.3.2	Development of Strategies: 6 to 8 Year Olds	191
	3.3.3	Counting On, Class Inclusion, and Criteria for a Flexible Use of Abstract Numbers	196
	3.3.4	The Relationship between Understanding of Concepts and Arithmetic Performance	199
	3.3.5	Implications for Teaching	199
	3.4	The Representation and Meaning of Numbers – the Place-Value System for Natural Numbers	200
	3.4.1	Early Encounters with Numbers Greater Than Ten	200
	3.4.2	The Idea of Grouping	203
	3.4.3	Reading and Writing Numbers	205
	3.4.4	Ordering	208
	3.4.5	Adding and Subtracting Mentally	210
	3.4.6	Decomposing	211
	3.4.7	Multiplying and Dividing by Powers of Ten	212
	3.4.8	Estimation and Approximation (with Whole Numbers)	214
	3.4.9	Implications for Teaching: Pre-requisites and Early Work	215
	3.4.10	Implications for Teaching: More Advanced Activities	218
	3.4.11	Implications for Teaching: the Use of Different Number Bases	219
	3.4.12	Summary	221

3.5	Number Operations: Understanding Their Meaning	221
3.5.1	Introduction	221
3.5.2	The ‘Meaning’ of Addition and Subtraction	221
3.5.2.1	Addition Problems	223
3.5.2.2	Subtraction Problems	226
3.5.3	The ‘Meaning’ of Multiplication and Division	231
3.5.3.1	Multiplication Problems	234
3.5.3.2	Division Problems	236
3.5.4	Summary: Implications for Teaching	237
3.6	Number Operations: Understanding the Structural Properties	238
3.6.1	The Development of Awareness of the Structure of Number Operations	238
3.6.2	The Structural Properties of Number Operations	242
3.6.3	Implications for Teaching	250
3.7	Number Operations: Computational Procedures	252
3.7.1	Introduction	252
3.7.2	Problems Associated with the Use of Standard Algorithms	253
3.7.3	Errors in the Performance of Standard Algorithms	255
3.7.4	The Relationship between ‘Understanding’ and Algorithmic Skill	262
3.7.5	Some Suggestions for Teaching Written Algorithms	264
3.7.6	Informal Algorithms	269
3.7.7	The Nature of Mental Algorithms: Implications for Teaching	272
3.8	Fractions, Decimals and Percentages: Meaning, Structure and Operations	274
3.8.1	Developing an Understanding of the Meaning of Fractions, Decimals and Percentages	274
3.8.1.1	Introduction: the Complex Nature of the Meaning of Fractions, Decimals and Percentages	274
3.8.1.2	Fractions as Sub-Areas of a Unit Region (‘Parts of a Whole’)	276
3.8.1.3	Fractions as Subsets of a Set of Discrete Objects	279
3.8.1.4	Fractions as Points on a Number-Line	281
3.8.1.5	Fractions as the Result of a Division Operation	282
3.8.1.6	Fractions as a Method of Comparing the Sizes of Two Sets, or Two Measurements	283
3.8.1.7	Understanding the Meaning of Decimals	284
3.8.1.8	Understanding the Meaning of Percentages	291
3.8.2	Understanding the Structure of Fractions, Decimals and Percentages	291

	3.8.2.1	Equivalence of Fractions	291
	3.8.2.2	Applying Equivalence Ideas to Ordering Fractions and Converting from Fractions to Decimals and Percentages	296
	3.8.2.3	Equivalence of Decimals and Percentages	298
3.8.3		Operations on Fractions and Decimals	303
	3.8.3.1	Operations on Fractions – ‘Meaning’ and ‘Computation’	303
	3.8.3.2	Addition and Subtraction of Fractions	305
	3.8.3.3	Multiplication and Division of Fractions	308
	3.8.3.4	Operations on Decimals	313
SECTION 4:		LANGUAGE – WORDS AND SYMBOLS	329
4.1		What is the Role of Language in the Development of Mathematical Concepts?	330
	4.1.1	Language and Thought	330
	4.1.2	Learning the Language of Mathematics	333
4.2		How Does Language Affect Problem-Solving Ability?	335
4.3		What are some of the Specific Difficulties Children Experience with the Language of Mathematics?	340
	4.3.1	The Reading and Comprehension of Words	341
	4.3.1.1	Words which are Similar in Appearance or Sound	341
	4.3.1.2	Words Specific to Mathematics	342
	4.3.1.3	Words which have Different Meanings in Mathematics and Ordinary English	343
	4.3.1.4	Words Meaning the Same for Mathematics and Ordinary English	345
	4.3.1.5	Which Words are not Readily Understood?	346
	4.3.1.6	Some Suggestions for Helping Children Understand Mathematical Vocabulary	351
	4.3.2	The Reading and Comprehension of Symbols	351
	4.3.2.1	Introduction	351
	4.3.2.2	Difficulties Children Experience with Number Symbols	354
	4.3.2.3	How do Children Interpret the Operation Signs: +, −, ×, ÷, and = ?	356
	4.3.2.4	A Suggestion to Help Children Read and Comprehend Symbols	358
	4.3.3	Transforming Problems into Mathematical Operations	358
	4.3.3.1	Transforming Word Problems	358
	4.3.3.2	A Suggestion for Helping Children Solve Word Problems	362
	4.3.4	Attaching Meaning to Symbols	363
	4.3.5	Some Difficulties Experienced by Children with Encoding their Answers	367
