

.....

Contents

1	Gaussian Elimination and its Variants	1
1.1	Systems of Linear Equations	1
1.2	Partitioning Matrices	4
1.3	The Problem	7
1.4	Triangular Systems	9
1.5	Positive Definite Systems; Cholesky Decomposition	17
1.6	Banded Positive Definite Systems	33
1.7	Gaussian Elimination and the <i>LU</i> Decomposition	41
1.8	Gaussian Elimination with Pivoting	59
1.9	Banded Systems	69
1.10	The Influence of Computer Architecture on Algorithm Selection	73
2	Sensitivity of Linear Systems; Effects of Roundoff Errors	86
2.1	Introduction	86
2.2	Vector and Matrix Norms	87
2.3	Sensitivity of Linear Systems; Condition Numbers	94
2.4	Estimating the Condition Number	108
2.5	Analysis of Roundoff Errors	109
2.6	Gaussian Elimination with Ill-Conditioned Matrices	119
2.7	Why Small Pivots Should be Avoided	123
2.8	Limitations of the Norm Approach	127
2.9	Scaling	128
2.10	Iterative Refinement	132

3	Orthogonal Matrices and the Least-Squares Problem	134
3.1	The Discrete Least-Squares Problem	134
3.2	Orthogonal Matrices, Rotators, and Reflectors	136
3.3	Solution of the Least-Squares Problem	158
3.4	Orthonormal Vectors and the Gram–Schmidt Method	167
3.5	Geometric Approach to the Least-Squares Problem	182
3.6	Sensitivity of the Least-Squares Problem	191
4	Eigenvalues and Eigenvectors I	199
4.1	Systems of Differential Equations	199
4.2	Basic Properties of Eigenvalues and Eigenvectors	204
4.3	The Power Method and Some Simple Extensions	210
4.4	Similarity Transformations and Related Topics	224
4.5	Reduction to Hessenberg and Tridiagonal Forms	237
4.6	The <i>QR</i> Algorithm	251
4.7	Implementation of the <i>QR</i> Algorithm	265
4.8	Use of the <i>QR</i> Algorithm to Calculate Eigenvectors	279
5	Eigenvalues and Eigenvectors II	287
5.1	Invariant Subspaces	287
5.2	Subspace Iteration, Simultaneous Iteration, and the <i>QR</i> Algorithm	293
5.3	Uniqueness Theorems for Hessenberg Form; the Lanczos Algorithm	306
5.4	Other Algorithms of <i>QR</i> Type	319
5.5	Sensitivity of Eigenvalues and Eigenvectors	325
5.6	The Generalized Eigenvalue Problem	337
6	Other Methods for the Symmetric Eigenvalue Problem	349
6.1	The Jacobi Method	349
6.2	The Slicing or Bisection Method	369
6.3	Cuppen’s Divide-and-Conquer Method	380

7 The Singular Value Decomposition	390
7.1 Introduction	390
7.2 Computing the SVD	398
7.3 Some Basic Applications of Singular Values	409
7.4 The SVD and the Least-Squares Problem	416
7.5 Angles and Distances between Subspaces	421
APPENDICES	
A Fast Rotators	431
B Software for Matrix Computations	439
Bibliography	441
Index	445
