

CONTENTS

Introduction	ix
<u>Chapter 1. From the History of Astronomy: Measurement and Successive Approximation.</u>	1
<u>Section 1 Measurement</u>	1
1 The Tunnel.	1
2 Measuring: Triangulating	5
3 How Far Away is the Moon?	7
4 To Teach Triangulation.	10
<u>Section 2 Astronomical Measurements</u>	10
1 Aristarchus of Samos.	10
2 Radius of Earth: Eratosthenes.	13
3 Rival Cosmologies	16
4 The Orbit of Venus.	22
5 Tycho Brahe and Kepler.	25
6 The Mars Year	27
7 The Orbit of Mars	31
8 A Word to the Teacher	36
9 Newton's Problem of a Comet's Path.	36
<u>Section 3 Successive Approximation.</u>	38
1 First Application	38
2 Extraction of Square Roots.	42
<u>Section 4 Newton's Method of Successive Approximation</u>	42
1 The General Method of Newton.	42
2 Newton's Formula.	45
3 \sqrt{a}	47
4 $\sqrt[3]{a}$	49
5 $\sqrt[5]{a}$	50

<u>Chapter 2.</u>	<u>From the History of Mechanics.</u>	53
<u>Section 1</u>	<u>Stevinus and Archimedes</u>	53
1	Inclined Plane.	53
2	Lever	.61
<u>Section 2</u>	<u>Vectors</u>	67
1	Inclined Plane.	71
2	Pulley.	73
3	Lever	75
4	Archimedes' Application of his Law of the Lever	82
5	$(-)\cdot(-) = (+)$	86
6	Von Mises' Flight Triangle.	89
<u>Chapter 3.</u>	<u>From the History of Dynamics</u>	97
<u>Section 1</u>	<u>Galileo</u>	97
1	Heavier Bodies Fall Faster?	97
2	Not "Why?", But "How?".	98
3	How do Heavy Bodies Fall?	98
4	Dynamics of the Inclined Plane.	105
5	Conservation of Energy.	109
6	Law of Inertia.	114
7	A Cannon Ball's Trajectory.	115
<u>Section 2</u>	<u>Newton.</u>	120
1	Apples, Cannon Balls, and the Moon.	121
2	Never Smoke Without Fire.	122
3	That the Planets do Accelerate Towards the Sun.	123
4	What is the Law of Universal Gravitation?	128
5	Uniform Circular Motion: Hamilton's Hodograph.	129
6	Newton's Discovery of the Law of Universal Gravitation	132
7	Scientific Attitude: Verification.	134
8	Hindsight and Foresight	138
<u>Section 3</u>	<u>The Pendulum.</u>	142
1	The Dimensions Test	142
2	Simple Pendulum's Time of Swing	144
3	Determination of g by Pendulum Experiment	146
4	The Conical Pendulum.	147

<u>Section 4</u>	<u>Escape Velocity</u>	153
1	Go-Around Velocity	155
2	Apropos Go-Away Velocity	156
3	The Force of Gravity	157
4	That Kepler's Third Law is a Consequence of Newton's Law of Gravitation.	160
5	Planetary Mass	161
6	Go-Away Velocity	163
7	Ratio of Escape and Orbital Velocities	170
<u>Chapter 4.</u>	<u>Physical Reasoning in Mathematics</u>	173
<u>Chapter 5.</u>	<u>Differential Equations and Their Use in Science</u>	175
<u>Section 1</u>	<u>First Examples</u>	175
1	Rotating Fluid	175
2	Galileo: Free Fall.	189
3	Catenary	192
4	Fall with Friction	205
<u>Section 2</u>	<u>Approximate Formulae: Power Series.</u>	210
	Introduction	210
1	Calculation of $\sqrt[3]{28}$	212
2	Fall with Friction Again	215
3	How Deep is a Well?.	219
4	Pendulum: Small Oscillations.	226
<u>Section 3</u>	<u>Physical Analogy</u>	238
