

Table of Contents

Editor's Preface	XI
Preface to the Romanian Edition	XIII
Preface to the English Edition	XV
Introduction	1
CHAPTER 1 / <i>Deterministic mathematical programming with several objective functions</i>	7
1.1. Problem Definition	7
1.2. The Relation between the Various Methods of Solving Mathematical Programming Problems with Multiple Objective Functions	16
1.3. Goal Programming	28
1.4. Maximum Global Utility Method	33
1.5. The Connection with the Theory of Games	43
1.6. POP Method	52
1.7. STEM Method	57
1.8. The Case of Two Objective Functions	62
1.9. A Note on the Present State of the Art	68
CHAPTER 2 / <i>Stochastic programming with one objective function</i>	71
2.1. Distribution Problems	72
2.2. Minimum-Risk Problems in Stochastic Programming	92
2.3. Two-Stage Programming under Uncertainty	98
2.4. The Complete Problem	104
2.5. Wets' Algorithm	109
2.6. Chance-constrained Programming	113

CHAPTER 3 / <i>Approaches to stochastic programming with multiple objective functions</i>	119
3.1. Chebyshev's Stochastic Problem. The Distribution Problem	121
3.2. Stochastic Fractional Programming. The Distribution Problem	135
3.3. Goal Programming. The Stochastic Case	141
3.4. Group Decision-Making in Stochastic Programming	153
3.5. Efficient Solutions in Stochastic Programming	165
3.6. The PROTRADE Method	172
3.7. The Case of Discrete Distributions	183
CHAPTER 4 / <i>Some generalizations of the minimum-risk problem and Kataoka's problem</i>	187
4.1. The Minimum-Risk Problem and Kataoka's Problem	187
4.2. Generalizations	201
4.3. The Minimum-Risk Approach to the Chebyshev Problem	223
CHAPTER 5 / <i>Multiple minimum-risk solutions in stochastic programming</i>	227
5.1. Problem Definition	227
5.2. The Case of Two Objective Functions	235
5.3. The Case of Three Objective Functions	242
5.4. The Case of r Objective Functions	252
5.5. A Different Approach	256
5.6. An Interactive Approach to Stochastic Programming with Multiple Objective Functions	261
CHAPTER 6 / <i>The transportation problem with multiple objective functions</i>	269
6.1. The Deterministic Case	269
6.2. The Stochastic Case	282
CHAPTER 7 / <i>Applications in economy</i>	287
7.1. Production Planning with Multiple Efficiency Criteria	287

7.2. Another Example of Production Planning	293
7.3. A Problem of Machinery Loading	297
7.4. A Mixing Problem	298
7.5. Optimisation of Flour Transportation	300
7.6. Efficient Use of Production Capacity in a Metal- lurgical Workshop	302
7.7. The Mathematical Model for Pig-iron Production . .	304
7.8. Operation Scheduling	305
7.9. The Assignment Problem	307
7.10. The Input-Output Model for Resource Allocation . .	309
References	313
