Contents

Introduction and summary of results 3

1. Fundamentals 10

1.1 Polytopes, systems of subsets, graphs 10

1.2 Definition and properties of adjacent extreme points 18

1.3 Algebraical adjacency characterizations
(a survey of the literature) 32

1.4 Combinatorial adjacency characterizations
(a survey of the literature) 40

2. Coloring criteria 53

2.1 Reduction theorems 53

2.2 Implicants of a system of subsets 57

2.3 Sufficiency of the coloring criteria 72

2.4 Necessity of the coloring criteria 99

2.5 Implementation of the simple coloring algorithm 117

3. Adjacency characterizations for specific 0-1 polytopes 119

3.1 Some immediate applications of the coloring criteria 121

3.2 Adjacency of b-matchings 129

3.3 Adjacency of branchings 153

3.4 Adjacency of linear and partial orderings 180

4. Appendix: PL/1 programs for the coloring algorithm 216

4.1 Adjacency of b-matchings 216

4.2 Adjacency of branchings 219

4.3 Adjacency of linear orderings 222
