

Contents

Chapter 1	Mathematical and computational introduction	1
10	Mathematical preliminaries	1
100	Vectors, matrices and norms	
101	Multilinear functions	
102	Calculus in vector spaces	
103	Partial derivatives	
104	The characteristic and minimal polynomials	
105	Convergent and stable matrices	
106	Metric spaces	
107	Uniform boundedness and equicontinuity	
11	Ordinary differential equations	16
110	Introduction to ordinary differential equations	
111	Examples of differential equations	
112	Fundamental theory of differential equations	
113	Linear differential equations	
114	Stability of differential equations	
12	Difference equations	37
120	Introduction to difference equations	
121	Linear difference equations with constant coefficients	
122	Matrix difference equations	
123	Stability of solutions to difference equations	
13	Numerical approximation	47
130	Introduction to numerical approximation	
131	The interpolational polynomial	
132	Hermite interpolation	
133	The calculus of finite differences	
134	Numerical quadrature	
135	Errors in numerical approximation	
136	Rational interpolation	
137	Padé approximations	
14	Graphs and combinatorics	79
140	Graphs	

- 141 A tree enumeration problem
- 142 Directed graphs
- 143 Notations for trees
- 144 Some functions defined on trees
- 145 Some enumeration problems
- 146 An algebraic structure related to trees

Chapter 2	The Euler method and its generalizations	105
20	The Euler method	105
200	Introduction	
201	Local truncation error	
202	Global truncation error	
203	Convergence of the Euler method	
204	Order of convergence	
205	Asymptotic error formula	
206	Stability characteristics	
207	Rounding error	
21	Generalizations of the Euler method	120
210	Introduction	
211	More computations in a step	
212	Dependence on more previous values	
213	Use of higher derivatives	
214	Multistep–multistage–multiderivative methods	
215	Implicit methods	
216	Local error estimates	
217	Composite cyclic methods	
218	Extrapolation methods	
22	Runge–Kutta methods	128
220	Historical introduction	
221	General form of explicit Runge–Kutta methods	
222	Consistency and convergence	
223	Order conditions	
224	Examples of methods	
225	Numerical examples	
23	Linear multistep methods	135
230	Historical introduction	
231	General form of linear multistep methods	
232	Consistency, stability and convergence	
233	Order conditions	
234	Predictor–corrector methods	
235	Examples of methods	
236	Numerical examples	
24	Taylor series methods	146
240	Introduction to Taylor series methods	
241	Manipulation of power series	
242	An example of a Taylor series solution	
243	Numerical results	
244	Other methods using higher derivatives	
245	The use of f derivatives	

Chapter 3 Analysis of Runge–Kutta methods	152
30 The order conditions	152
300 The order of two-stage methods	
301 Elementary differentials	
302 The Taylor series for the differential equation solution	
303 The Taylor series for the implicit Euler method	
304 Elementary weights	
305 The Taylor series for the Runge–Kutta solution	
306 Values of elementary weights and differentials	
307 The order conditions	
31 Low-order explicit methods	173
310 Methods with orders less than four	
311 The last stage of fourth-order methods	
312 Fourth-order methods	
313 The classical Runge–Kutta method	
314 Gill's Runge–Kutta method	
32 The attainable order of explicit methods	184
320 Introductory comments	
321 An elementary bound	
322 Impossibility of five-stage fifth-order methods	
323 Impossibility of p -stage p th-order methods with $p \geq 5$	
324 A sequence of bounds	
325 A lower bound	
326 Summary of known bounds	
33 High-order explicit methods	194
330 Row-simplifying assumptions	
331 Column-simplifying assumptions	
332 Fifth-order methods	
333 A generalization of fifth-order methods	
334 Sixth-order methods	
335 Methods of orders seven or more	
34 Implicit Runge–Kutta methods	209
340 Introduction	
341 Implementation	
342 The effect of simplifying assumptions	
343 Methods based on Gauss–Legendre quadrature	
344 Reflected methods	
345 Methods of order $2s - 1$, $2s - 2$	
346 Collocation methods	
347 Semi-implicit methods	
348 Singly implicit methods	
35 Stability properties of Runge–Kutta methods	237
350 Stability analysis	
351 Stability regions for explicit methods	
352 A -stable methods	
353 Further A -stable methods	
354 Order stars and stability	
355 AN -stability	
356 Non-linear stability	
357 Generalizations of algebraic stability	

358	The W transformation	
359	Solvability of the algebraic equations	
36	Error propagation in Runge-Kutta methods	275
360	Introduction to error propagation	
361	Local truncation error	
362	The principal error function	
363	Optimal methods	
364	Global truncation error	
365	Optimal order and stepsize sequences	
366	S -stability and stiff order	
367	B -consistency and B -convergence	
368	Runge-Kutta methods with even error expansions	
37	Runge-Kutta methods with error estimates	294
370	Introduction	
371	Richardson error estimates	
372	Methods with built-in estimates	
373	A class of error-estimating methods	
374	The methods of E. Fehlberg	
375	The methods of J. H. Verner	
376	Further error-estimating methods	
377	Embedded implicit methods	
38	Algebraic properties of Runge-Kutta methods	311
380	The Runge-Kutta space	
381	Multiplication in the Runge-Kutta space	
382	Algebraic properties of the Runge-Kutta space	
383	Graph-theoretic representation	
384	The Runge-Kutta homomorphism theorem	
385	The image of the ideals I_p	
386	The element E	
387	The element D and the order of Runge-Kutta methods	
388	Miscellaneous constructs	
389	Examples of Runge-Kutta space usage	
Chapter 4	General linear methods	335
40	Introduction to general linear methods	335
400	General classes of methods	
401	Representation by matrices	
402	Reduction to standard case	
403	Generalizations	
404	Implementation	
41	Examples of general linear methods	340
410	Runge-Kutta methods as examples	
411	Linear multistep methods as examples	
412	Predictor-corrector methods as examples	
413	Modified multistep methods as examples	
414	One-leg methods as examples	
415	Miscellaneous examples	
42	Stability, consistency and convergence	352
420	Stability	

421	Consistency	
422	Convergence	
423	Necessity of stability	
424	Necessity of consistency	
425	A lemma on stable sequences	
426	Sufficiency of stability with consistency	
427	Generalizations	
43	Order of accuracy	370
430	Natural definitions of order	
431	Order relative to a starting procedure	
432	Algebraic criteria for order	
433	Global error estimates	
434	Particular cases	
435	Effective order of Runge–Kutta methods	
44	Stability properties of general linear methods	388
440	Linear and non-linear stability	
441	Linear stability	
442	Relationships between linear stability properties	
443	Monotonic problems and methods	
444	Algebraic stability for general linear methods	
445	An example of an algebraically stable method	
446	The equivalence of Euclidean AN - and algebraic stabilities	
447	Generalizations of algebraic stability	
45	Practical prospects for general linear methods	400
450	Survey of possible methods	
451	A fourth-order Runge–Kutta–Nordsieck method	
452	A fifth-order Runge–Kutta multistep method	
453	General linear methods for stiff problems	
	Bibliography	408
	Additional references	504
	Index	506
