1.	Preliminaries	1
1.1	Introduction	1
1.2	Notation	2
1.3	Some Elements from Linear Algebra	5
1.3.1	Analysis of Iterative Processes	5
1.3.2	Norms	6
1.3.3	Symmetric Matrices	8
1.4	Some Elements from Functional Analysis	9
1.4.1	Continuous Functions and Hölder Spaces	9
1.4.2	Sobolev Spaces	10
1.4.3	Dual Spaces	10
1.4.4	Hilbert Scales	11
1.4.5	Sesqui-Linear Forms	14
1.5	Exercises	15
2.	Introductory Model Problem	17
2.1	One-Dimensional Model Problem	17
2.2	Smoothing Effect of Classical Iterations	18
2.3	Two-Grid Method	21
2.4	Convergence of the Two-Grid Iteration	25
2.5	Multi-Grid Method	30
2.6	Comments	34
2.6.1	Variants of the Two- and Multi-Grid Iteration	34
2.6.2	Contraction Numbers with Respect to Other Norms	35
2.6.3	Measuring of the Smoothing Effect	36
2.6.4	The Multi-Grid Iteration as a New Type of Iteration	37
2.6.5	Historical Comments	38
2.7	Exercises	39
3.	General Two-Grid Method	41
3.1	The Boundary Value Problem and Its Discretisation	41
3.1.1	The Boundary Value Problem	41

3.1.2	Finite Difference Discretisation	43
3.1.3	Conforming Finite Element Discretisation	46
3.2	Two-Grid Algorithm	48
3.3	Smoothing Iterations	49
3.5.1	Gauß-Seidel Iteration	49
3.3.2	Modifications of Jacobi's Iteration	52
3.3.3	Blockwise Iterations	54
3.3.4	ADI as a Smoothing Procedure	55
3.3.5	Semi-Iterative Methods	56
3.3.6	Conjugate Gradient Methods	57
3.3.7	Other Smoothing Iterations	58
3.4	Prolongation	58
3.4.1	Fine and Coarse Grid	58
3.4.2	Piecewise Linear Interpolation as Prolongation	59
3.4.3	Interpolation of Higher Order	61
3.4.4	Modifications	63
3.5	Restriction	64
3.6	Canonical Prolongations and Restrictions for Finite Element Equations	66
3.7	Coarse-Grid Matrix	68
3.8	Comments	69
3.8.1	Separated Discrete Boundary Conditions	69
3.8.2	Construction of a Finite Element Hierarchy	71
3.8.3	A Further Variant of the Two-Grid Iteration	74
3.8.4	The Case of $\Omega_{l-1} \not\subset \Omega_l$	76
3.8.5	Comment on Weighted Restrictions	77
3.9	Exercises	78
4.	General Multi-Grid Iteration	80
4.1	Multi-Grid Algorithm	80
4.2	Convergence of the Multi-Grid Iteration	85
4.3	Computational Work	86
4.4	Examples of Multi-Grid Iterations and Numerical Results	89
4.4.1	A Multi-Grid Program for Solving Poisson's Equation	89
4.4.2	Poisson's Equation in a General Domain	94
4.4.3	Other Boundary Conditions	95
4.4.4	Further Poisson Solvers	96
5.	Nested Iteration Technique	98
5.1	Algorithm	98
5.2	Analysis of the Nested Iteration	100
5.3	Computational Work and Efficiency	103
5.4	Nested Iteration with Extrapolation	104
5.5	Numerical Example	107

5.6	Comments	109
5.7	Exercises	110
6.	Convergence of the Two-Grid Iteration	112
6.1	Sufficient Conditions for Convergence	112
6.1.1	The Two-Grid Iteration Matrix	112
6.1.2	A Factorisation of M_l	113
6.1.3	Smoothing and Approximation Properties	113
6.1.4	A General Convergence Theorem	114
6.1.5	The Case of $\nu_2 \neq 0$	115
6.2	The Smoothing Property	116
6.2.1	Preparatory Lemmata	117
6.2.2	Criteria	120
6.2.3	The Smoothing Property of the Jacobi Iterations	122
6.2.3.1	The Simple Damped Jacobi Iteration	122
6.2.3.2	The Damped Jacobi Iteration (3.3.6)	123
6.2.3.3	Jacobi's Iteration with Squared Matrix	123
6.2.3.4	The Case of Non-Hermitian L_l	124
6.2.4	The Smoothing Property of the Gauß-Seidel Iteration	125
6.2.4.1	The 2-Cyclic Gauß-Seidel Iteration	125
6.2.4.2	The Lexicographical Gauß-Seidel Iteration	128
6.2.4.3	The Symmetric Gauß-Seidel Iteration	129
6.2.4.4	Estimates with Respect to Other Norms	130
6.2.4.5	The Case of Non-Hermitian L_l	131
6.2.5	The Smoothing Property of Semi-Iterative Methods	131
6.2.5.1	Richardson's Iteration	131
6.2.5.2	The Accelerated Symmetric Gauß-Seidel Iteration	133
6.2.5.3	The Alternating Direction Method	134
6.3	The Approximation Property	134
6.3.1	The Approximation Property of Finite Element Equations	135
6.3.1.1	The Definition of the Problem	135
6.3.1.2	The Standard Case	137
6.3.1.3	The Less Regular Case	140
6.3.1.4	The Very Regular Case	143
6.3.1.5	The Smoothing Property Revisited	144
6.3.2	The Approximation Property of Finite Difference Schemes	145
6.3.2.1	The Discrete Regularity	145
6.3.2.2	Criteria	147
6.4	The Symmetric Case	150
6.4.1	Quantitative Analysis	150
6.4.2	Estimates Without Regularity Assumptions	154
6.5	Comments	155
6.6	Exercises	157

7.	Convergence of the Multi-Grid Iteration160
7.1	The General Convergence Theorem160
7.2	The Symmetric Case164
7.3	Comments167
7.4	Exercises167
8.	Fourier Analysis169
8.1	Model Examples169
8.1.1	Poisson's Equation in a Square169
8.1.2	Periodic Boundary Conditions173
8.1.3	The Case of $\Omega = \mathbb{R}^d$175
8.2	Local Mode Analysis176
8.2.1	Neglect of the Boundary Conditions177
8.2.2	Treatment of Variable Coefficients177
8.2.3	Idealisation of the Coarse-Grid Correction and Smoothing Rates178
9.	Nonlinear Multi-Grid Methods181
9.1	The Nonlinear Problem181
9.2	Newton-Multi-Grid Iteration182
9.3	The Nonlinear Multi-Grid Iteration183
9.3.1	Nonlinear Smoothing Iterations184
9.3.2	The Nonlinear Two-Grid Iteration185
9.3.3	The Nonlinear Multi-Grid Algorithm187
9.3.4	The Nonlinear Nested Iteration188
9.4	Numerical Example: Natural Convection in an Enclosed Cavity189
9.5	Convergence Analysis192
9.5.1	Convergence of the Nonlinear Two-Grid Iteration192
9.5.2	Convergence of the Nonlinear Multi-Grid Iteration196
9.5.3	Analysis of the Nonlinear Nested Iteration198
9.6	Exercises199
10.	Singular Perturbation Problems201
10.1	Anisotropic Elliptic Equations201
10.1.1	A Model Problem201
10.1.2	Smoothing with Respect to Alternating Directions204
10.1.3	The Incomplete LU Decomposition as a Smoother205
10.2	Indefinite Problems209
10.2.1	Strongly Positive Definite Problems209
10.2.2	Weakly Indefinite Problems210
10.3	Interface Problems212

10.3.1	A One-Dimension Model Example212
10.3.2	Two-Dimensional Interface Problems215
10.4	Convection Diffusion Equation217
10.4.1	The Continuous Problem217
10.4.2	Stable Discretisations218
10.4.3	Multi-Grid Algorithms220
10.4.3.1	The Case of the Stable Discretisation (5 b)220
10.4.3.2	Wesseling's Multi-Grid Algorithm222
10.4.3.3	The Case of Scheme (5 a) with Artificial Viscosity223
10.5	Comments226
10.6	Exercises229
11.	Elliptic Systems231
11.1	Examples231
11.1.1	Systems of Coupled Elliptic Equations231
11.1.2	Examples: Systems of Cauchy-Riemann, Stokes, and Navier-Stokes233
11.1.3	Ellipticity of a General System234
11.1.4	Variational Formulation235
11.1.5	Discretisation236
11.2	A Multi-Grid Approach to a General System237
11.2.1	Appropriate Norms and Scales237
11.2.1.1	The Continuous Case237
11.2.1.2	Discrete Spaces238
11.2.1.3	Approximation Property239
11.2.2	A Smoothing Iteration for a General System242
11.2.3	Nonlinear Systems245
11.3	The Distributive Relaxation Smoother245
11.4	An Elliptic Problem Augmented by an Algebraic Equation248
11.4.1	The Linear Case248
11.4.2	The Nonlinear Case250
12.	Eigenvalue Problems and Singular Equations252
12.1	Discussion of the Problems252
12.1.1	Eigenvalue Problem252
12.1.2	Singular Equations253
12.2	Reformulation of the Problems255
12.2.1	Reformulation of the Eigenvalue Problem as a Nonlinear Equation255
12.2.2	Reformulation of the Singular Equation256
12.3	Direct Multi-Grid Approach to Eigenvalue Problems257
12.3.1	Derivation of a Two-Grid Iteration257
12.3.2	Modifications and Generalisations260

12.3.3	Multi-Grid Iteration for the Eigenvalue Problem and the Nested Iteration261
12.3.4	Ritz' Projection264
12.3.5	Direct Multi-Grid Solution of the Singular Equation265
12.3.6	Simultaneous Solution of n Singular Equations266
12.4	The Generalised Eigenvalue Problem267
12.5	The Nonlinear Eigenvalue Problem269
13.	Continuation Techniques270
13.1	Continuous Continuation Problem270
13.2	Modified Nested Iteration271
13.2.1	Treatment of Turning Points271
13.2.2	Modified Nested Iteration272
13.2.3	Modifications274
13.2.4	Frozen Truncation Error Technique275
13.3	Parabolic Initial-Boundary Value Problems276
14.	Extrapolation and Defect Correction Techniques277
14.1	Extrapolation277
14.1.1	Richardson's Extrapolation277
14.1.2	Truncation Error Extrapolation278
14.1.3	τ -Extrapolation278
14.2	Defect Correction Techniques282
14.2.1	The Iterative Defect Correction282
14.2.2	The Defect Correction as a Finite Process283
14.3	Combinations of the Multi-Grid Method and the Defect Correction Principle284
14.3.1	The Multi-Grid Algorithm as a Secondary Iteration284
14.3.2	The Defect Correction with Additional Smoothing285
14.3.3	The Defect Correction Inside the Multi-Grid Process287
14.3.3.1	Algorithms287
14.3.3.2	Convergence Analysis of the Multi-Grid Iteration with Defect Correction288
14.3.3.3	Error Estimates of the Limit \hat{u}_l289
14.3.3.4	Extensions291
14.3.4	An Application to the Convection Diffusion Equation292
15.	Local Techniques293
15.1	The Local Defect Correction293
15.2	A Multi-Grid Iteration with a Local Grid Refinement297
15.3	Domain Decomposition Methods299
15.3.1	Domain Decomposition299

15.3.2	The Schwarz Iteration	300
15.3.3	Multi-Grid Methods with Domain Decompositions	302
16.	The Multi-Grid Method of the Second Kind	305
16.1	Fredholm's Integral Equation of the Second Kind	305
16.1.1	Historical Comments	305
16.1.2	Fredholm's Integral Equation of the Second Kind	305
16.1.3	Discretisation	306
16.2	Multi-Grid Iteration	309
16.2.1	First Variant	309
16.2.1.1	Algorithm	309
16.2.1.2	Computational Work	310
16.2.1.3	Convergence Analysis	311
16.2.2	Second Variant	313
16.2.2.1	Algorithm	313
16.2.2.2	Computational Work	314
16.2.2.3	Convergence Analysis	314
16.2.3	Third Variant	315
16.2.3.1	Algorithm	315
16.2.3.2	Computational Work	315
16.2.3.3	Convergence Analysis	315
16.3	Numerical Results	316
16.3.1	Comparison of the Three Variants	316
16.3.2	The Integral Equation Method for Elliptic Problems	319
16.4	Nested Iteration	321
16.4.1	Algorithm	321
16.4.2	Accuracy	322
16.4.3	Nested Iteration with Nyström's Interpolation	322
16.5	Comments and Modifications	324
16.5.1	More than One Picard Iteration	324
16.5.2	Other Smoothing Iterations	324
16.5.3	Application of the Integral Equation Method to the Calculation of Circulatory Flow around an Aerofoil	325
16.5.4	Construction of the Coarse-Grid Discretisation	327
16.5.5	Further Modifications	327
16.6	The Nonlinear Equation of the Second Kind	328
16.7	Nonlinear Multi-Grid Method of the Second Kind	330
16.7.1	Two-Grid Iteration	330
16.7.2	Multi-Grid Iteration	331
16.7.3	Nested Iteration	333
16.7.4	Convergence	333
16.7.5	Computational Work	334
16.8	Application to Nonlinear Elliptic Equations	335
16.8.1	Reformulation of the Continuous Boundary Value Problem	335

16.8.2	Discretisation336
16.8.3	Computational Work337
16.8.4	Numerical Example338
16.9	Multi-Grid Methods with Iterative Computation of $\mathcal{K}_l(u_l)$338
16.9.1	Notation338
16.9.2	Algorithm339
16.9.3	Convergence Analysis341
16.10	Applications to Elliptic Boundary Value and Eigenvalue Problems345
16.10.1	Elliptic Boundary Value Problems345
16.10.2	Eigenvalue Problems347
16.10.3	First Example: Steklov Eigenvalue Problem348
16.10.4	Second Example: Nonlinear Eigenvalue Problem349
16.10.5	Elliptic Boundary Value Problems (Revisited)349
16.11	Application to Parabolic Problems351
16.11.1	Time-Periodic Parabolic Problems351
16.11.2	Optimal Control Problems for Parabolic Equations352
