

Contents

1	Hyperbolic Partial Differential Equations	1
1.1	Overview of Hyperbolic Partial Differential Equations	1
1.2	Boundary Conditions	8
1.3	Introduction to Finite Difference Schemes	13
1.4	Convergence and Consistency	19
1.5	Stability	23
1.6	The Courant-Friedrichs-Lewy Condition	28
2	Analysis of Finite Difference Schemes	32
2.1	Fourier Analysis	32
2.2	Von Neumann Analysis	40
2.3	Comments on Instability and Stability	50
3	Order of Accuracy of Finite Difference Schemes	53
3.1	Order of Accuracy	53
3.2	Difference Notation and the Difference Calculus	67
3.3	Boundary Conditions for Finite Difference Schemes	74
3.4	Solving Tridiagonal Systems	78
4	Stability for Multistep Schemes	82
4.1	Stability for the Leapfrog Scheme	82
4.2	Stability for General Multistep Schemes	89
4.3	The Theory of Schur and von Neumann Polynomials	91
5	Dissipation and Dispersion	100
5.1	Dissipation	100
5.2	Dispersion	103
5.3	Group Velocity and the Propagation of Wave Packets	106

6	Parabolic Partial Differential Equations	112
6.1	Overview of Parabolic Partial Differential Equations	112
6.2	Parabolic Systems and Boundary Conditions	117
6.3	Finite Difference Schemes for Parabolic Equations	119
6.4	The Convection-Diffusion Equation	129
6.5	An Approximate Integral Method	133
7	Systems of Partial Differential Equations in Higher Dimensions	135
7.1	Stability of Finite Difference Schemes for Systems of Equations	135
7.2	Finite Difference Schemes in Two and Three Dimensions	138
7.3	The Alternating Direction Implicit (ADI) Method	142
8	Second-Order Equations	154
8.1	Second-Order Time-Dependent Equations	154
8.2	Finite Difference Schemes for Second-Order Equations	158
8.3	Boundary Conditions for Second-Order Equations	164
8.4	Second-Order Equations in Two and Three Dimensions	166
9	Analysis of Well-Posed and Stable Problems	169
9.1	The Theory of Well-Posed Initial Value Problems	169
9.2	Well-Posed Systems of Equations	177
9.3	Estimates for Inhomogeneous Problems	185
9.4	The Kreiss Matrix Theorem	188
10	Convergence Estimates for Initial Value Problems	198
10.1	Convergence Estimates for Smooth Initial Functions	198
10.2	Related Topics	209
10.3	Convergence Estimates for Nonsmooth Initial Functions	214
10.4	Convergence Estimates for Parabolic Differential Equations	220
10.5	The Lax-Richtmyer Equivalence Theorem	222
10.6	Analysis of Multistep Schemes	227
10.7	Convergence Estimates for Second-Order Differential Equations	230

11	Well-Posed and Stable Initial-Boundary Value Problems	234
11.1	Preliminaries	234
11.2	Analysis of Boundary Conditions for the Leapfrog Scheme	239
11.3	The General Analysis of Boundary Conditions	247
11.4	Initial-Boundary Value Problems for Partial Differential Equations	257
11.5	The Matrix Method for Analyzing Stability	265
12	Elliptic Partial Differential Equations and Difference Schemes	269
12.1	Overview of Elliptic Partial Differential Equations	269
12.2	Regularity Estimates for Elliptic Equations	272
12.3	Maximum Principles	275
12.4	Boundary Conditions for Elliptic Equations	277
12.5	Difference Schemes for Poisson's Equation	279
12.6	Polar Coordinates	286
12.7	Coordinate Changes and Finite Differences	287
13	Linear Iterative Methods	291
13.1	Solving Finite Difference Schemes for Laplace's Equation in a Rectangle	291
13.2	Analysis of the Jacobi and Gauss-Seidel Methods	294
13.3	Convergence Analysis of Point S.O.R.	301
13.4	Linear Iterative Methods for Symmetric, Positive Definite Matrices	310
13.5	The Neumann Boundary Value Problem	313
14	The Method of Steepest Descent and the Conjugate Gradient Method	323
14.1	The Method of Steepest Descent	323
14.2	The Conjugate Gradient Method	327
14.3	Implementing the Conjugate Gradient Method	333
14.4	A Convergence Estimate for the Conjugate Gradient Method	336
14.5	The Preconditioned Conjugate Gradient Method	339
14.6	Minimum Residual Methods	347

APPENDICES

A	Matrix and Vector Analysis	351
A.1	Vector and Matrix Norms	351
A.2	Analytic Functions of Matrices	358
B	A Survey of Real Analysis	365
B.1	Topological Concepts	365
B.2	Measure Theory	365
B.3	Measurable Functions	366
B.4	Lebesgue Integration	367
B.5	Function Spaces	369
C	A Survey of Results from Complex Analysis	371
C.1	Basic Definitions	371
C.2	Complex Integration	372
C.3	A Phragmen-Lindelöf Theorem	374
C.4	A Result for Parabolic Systems	376
	References	379
	Index	383
