

TABLE OF CONTENTS

1. INTRODUCTION 1
2. INDUCTIVE INFERENCE AND
“EXPERIMENTAL ERROR” 3
3. A POPULATION-SAMPLE MODEL:
LOCAL INFERENCE
The need for mathematical models — 6. A mathematical model for local inference — 8. Fitting the model to a given situation — 10. Interpretation of results in terms of the model — 11.
4. EXPANSION OF THE MODEL:
INFERENCE IN THE LARGE
Qualitative variables and comparative experiments — 16.
Quantitative variables — 17. Relationships — 18.
5. INTERPRETATION OF RESULTS
Confidence statements — 21. Other methods of interpretation — 24.
6. RANDOM VARIABLES AND
DISTRIBUTIONS
The distribution function of a single random variable — 27. Examples of discrete distributions — 31. Examples

of distributions with density functions — 34. The expected value of a random variable — 35. The joint distribution of several random variables — 37. Sampling from a distribution — 38. Examples — 39.

7. VARIANCE AND RELATED TOPICS

Definition of variance — 41. Variance of the sample mean — 42. The sample variance — 43. Analysis of variance — 44. Confidence statements about means of normally distributed random variables — 47.

8. PROBLEMS OF SAMPLING IN PHYSICAL SITUATIONS

Sources of error — 56. The natural correlation of errors — 57. Occurrence of correlation in different kinds of error — 58. Sample size — 61.

9. RANDOMIZATION

Comparative experimentation — 65. The use of randomization — 66.

10. RESTRICTED RANDOMIZATION AND EXPERIMENTAL DESIGNS

Restricted randomization — 70. Experimental designs — 75. One-factor designs — 76. Multi-factor designs — 81.

11. REGRESSION, OR CURVE FITTING

Definition of the method of least squares — 86. Regression — 87. Designing for regression — 91.

12. CONCLUDING REMARKS 94
