Preface *xi*

Notation *xviii*

Introduction: The Scope of the Book *1*

1: Mathematical Models *7*

1.1 The Cyclical Nature of Mathematical Modelling *7*

1.2 An Example: One-Way Streets *8*

1.3 Steps in the Mathematical Modelling Cycle *14*

1.4 Types of Models *16*

2: Graphs *20*

2.1 Some Examples *20*

2.2 Connectedness *31*

2.2.1 Reaching 31

2.2.2 Distance 33

2.2.3 Joining 33

2.2.4 Connectedness Categories 34

2.2.5 Criteria for Connectedness 35
2.2.6 The Case of Graphs 38

2.3 STRONG COMPONENTS AND THE VERTEX BASIS *42*
2.3.1 Vertex Bases and Communication Networks 42
2.3.2 Theorems and Proofs 46
2.3.3 Some Graph-Theoretical Terminology 48

2.4 DIGRAPHS AND MATRICES *52*
2.4.1 The Adjacency Matrix 53
2.4.2 The Reachability Matrix 56
2.4.3 The Distance Matrix 58

3: Applications of Graphs *64*

3.1 SIGNED GRAPHS AND THE THEORY OF STRUCTURAL BALANCE *64*
3.1.1 Signed Graphs 64
3.1.2 Balance in Small Groups 65
3.1.3 Proof of the Structure Theorem 70

3.2 TOURNAMENTS *81*

3.3 ORIENTABILITY AND VULNERABILITY *93*
3.3.1 Traffic Flow 93
3.3.2 Vulnerability 98
3.3.3 Transitive Orientability 100

3.4 INTERSECTION GRAPHS *111*
3.4.1 Definition of an Intersection Graph 111
3.4.2 Interval Graphs and their Applications 113
3.4.3 Characterization of Interval Graphs 121
3.4.4 Proofs of the Lemmas of Sec. 3.4.3 127
3.4.5 Other Intersection Graphs 129
3.4.6 Phasing Traffic Signals 129

3.5 FOOD WEBS *140*
3.5.1 The Dimension of Ecological Phase Space 140
3.5.2 Trophic Status 145

3.6 GARBAGE TRUCKS AND COLORABILITY *156*
3.6.1 Tours of Garbage Trucks 156
3.6.2 Theorems on Colorability 158
3.6.3 The Four Color Problem 162

4: Weighted Digraphs and Pulse Processes *176*

4.1 INTRODUCTION: ENERGY AND OTHER APPLICATIONS *176*

4.2 EXCURSIS: EIGENVALUES *178*

4.3 The Signed or Weighted Digraph as a Tool for Modelling Complex Systems *186*

4.4 Pulse Processes *207*

4.5 Stability in Pulse Processes *217*
4.5.1 Definition of Stability 217
4.5.2 Eigenvalues and Stability 219
4.5.3 Structure and Stability: Rosettes 222

4.6 Applications of the Theory of Stability *230*

4.7 Proofs of Theorems 4.6 through 4.8 *243*

5: Markov Chains *258*

5.1 Stochastic Processes and Markov Chains *258*

5.2 Transition Probabilities and Transition Digraphs *263*

5.3 Classification of States and Chains *274*

5.4 Absorbing Chains *278*

5.5 Regular Chains *289*
5.5.1 Definition of Regular Chain 289
5.5.2 Fixed Point Probability Vectors 291
5.5.3 Mean First Passage 294
5.5.4 Proof of Theorem 5.8 296

5.6 Ergodic Chains *302*
5.6.1 The Periodic Behavior of Ergodic Chains 302
5.6.2 Generalization from Regular Chains 306

5.7 Applications to Genetics *310*
5.7.1 The Mendelian Theory 310
5.7.2 Predictions from the Mendelian Model 312

5.8 Flow Models *320*
5.8.1 An Air Pollution Flow Model 320
5.8.2 A Money Flow Model 324

5.9 Mathematical Models of Learning *331*
5.9.1 The Linear Model 332
5.9.2 The 1-element All-or-none Model 332
5.9.3 The 2-element All-or-none Model 336
5.9.4 The Estes Model 338

5.10 Influence and Social Power *346*

5.11 Diffusion and Brownian Motion *358*

6: *n*-Person Games *364*

6.1 Games in Characteristic Function Form *364*

6.2 The Core *371*
6.2.1 Effective Preference 371
6.2.2 Computation of the Core 373

6.3 Stable Sets *379*

6.4 The Existence of a Nonempty Core *386*

6.5 Existence and Uniqueness of Stable Sets *391*

6.6 S-Equivalence and the (0, 1)-Normalization *400*
6.6.1 Isomorphism and S-equivalence 400
6.6.2 The Geometric Point of View 404

6.7 The Shapley Value *410*
6.7.1 Shapley's Axioms 410
6.7.2 Examples 411
6.7.3 Simple Games 412
6.7.4 The Probabilistic Interpretation and Applications to Legislatures 414
6.7.5 Proof of the Value Formula 417

7: Group Decisionmaking *425*

7.1 Social Welfare Functions *425*

7.2 Arrow's Impossibility Theorem *433*
7.2.1 Arrow's Axioms 433
7.2.2 Discussion 437
7.2.3 Proof of Arrow's Theorem 440

7.3 Joint Scales and Single-Peakedness *447*

7.4 Distance between Rankings *455*
7.4.1 The Kemeny-Snell Axioms 455
7.4.2 Calculating Distance 459
7.4.3 Medians and Means 462
7.4.4 Remarks 464

8: Measurement and Utility *473*

8.1 Introduction *473*

8.2 Relations *474*
8.2.1 Definition of Relation 474
8.2.2 Properties of Binary Relations 476
8.2.3 Operations 478

8.3 The Theory of Measurement *484*

8.4 Scale Type and the Theory of Meaningfulness *489*
8.4.1 Regular Scales 489
8.4.2 Scale Type 491
8.4.3 Examples of Meaningful and Meaningless Statements 493

8.5 Examples of Fundamental Measurement I: Ordinal Utility Functions *503*
8.5.1 The Representation Theorem 503
8.5.2 The Expected Utility Hypothesis 508
8.5.3 The Uniqueness Theorem 510
8.5.4 *Remarks 511*

8.6 Examples of Fundamental Measurement II: Extensive Measurement *516*
8.6.1 *Hölder's Theorem 516*
8.6.2 Uniqueness 520
8.6.3 A Comment 521

8.7 Examples of Fundamental Measurement III: Conjoint Measurement *525*

8.8 Semiorders *534*
8.8.1 The Scott-Suppes Theorem 534
8.8.2 *Uniqueness 538*
8.8.3 Interval Orders and Measurement Without Numbers 538

Author Index *549*

Subject Index *551*
