Foreword

vii

PART ONE: LINEAR ALGEBRA AND ANALYSIS

I. Linear mappings. Operations on matrices.	2
1. Representations of linear mappings by matrices	2
2. Non-commutativity of the product	4
3. Product of symmetric matrices	4
4. Non-associativity of a column by column product	4
5. Lorentz rotations	5
6. Solutions of linear equations	6
7. Solutions of linear equations	7
8. Solutions of linear equations	8
9. Independence of linear equations (M.M.P. Paris test, 1955)	9
10. Quadrupoles (commutativity) (M.M.P. Marseille, 1956)	12
11. Computation of the inverse of a matrix (M.M.P. Lille, 1957)	13
12. Inverse matrix. Divisors of zero (M.M.P. Lille, 1957)	15
13. Group of matrices (M.M.P. Caen, 1957)	16
II. Proper values and proper vectors. Reduction of matrices.	20
14. Calculation of the proper values and proper vectors	20
15. A System of differential equations with constant coefficients	21
16. Group of matrices of dimension 2 (T.M.P. Paris, 1959)	22
17. Multiple proper values (M.M.P. Marseille, 1956)	25
18. Multiple proper values	28
19. Multiple proper values	30
20. Natural modes of vibration	32
21. Functions of a matrix	34
22. Necessary and sufficient condition for a matrix to have a complete system of proper vectors	38
23. Stochastic matrices	40
24. Proper values of mappings in the space of all second-degree polynomials	42
25. Maximal properties of the proper values	43
III. Scalar product and norm. Hermitian operators.	47
26. Equality of scalar products in arbitrary bases	47

27. Norms on the space of polynomials of degree p	48
28. Norms on the space of real square matrices of dimension 2	50
29. Proper values and vectors of an hermitian matrix	51
30. Gram determinant	52
31. Study of electric circuits	54
32. Unitary operators	57
33. Product of a positive definite operator and unitary operator	60
34. Product of a positive definite operator and unitary operator	62
35. Matrix commuting with its adjoint	64
36. System of coupled oscillators	67
37. Matrix differential equations	72
38. Positive definite quadratic forms	74
39. Proper values of a matrix A relative a matrix B —Simultaneous reduction of quadratic forms	78
IV. Vector calculus. Multiple integrals.	83
40. Convergence of single and double integrals	83
41. Calculation of often appearing integrals	86
42. Divergence-free vector fields	90
43. Tensorial nature of the coefficients of a quadratic form	91
44. Rank of a tensor	92
45. Kronecker tensors	93
46. Contracted tensor	95
47. Space time of special relativity	96
48. Maxwell equations	99
49. Absolute differentials	102
50. Flux of the gradient of $1/r$	103
51. Stokes formula	107
52. Stokes formula	112
53. Stokes formula	114

PART TWO: FUNCTION SPACES. INTEGRAL AND DIFFERENTIAL OPERATORS

V. Function spaces and operators.	120
1. Vector space and subspaces	120
2. Vector space and subspaces	120
3. Distance in a space of continuous functions	122
4. Norms on a space of continuously differentiable functions	122
5. Space of continuous functions with the norm L_1	124
6. Regulated functions	125
7. Convergence of a series of functions in the sense of the norm L_1	127
8. Summable families	128
9. Pre-Hilbert inner product and norm	130

10. Convolutions of functions in L_2	131
11. Convergence of a sequence in a Hilbert space	132
12. Hilbert space of square summable sequences	133
13. System of linear equations in a Hilbert space	136
14. Primitive operator—Iteration	141
15. Projectors	144
16. Integral operators	146
17. Fredholm integral operator	151
18. Hermitian operator—Proper functions	158
19. Adjoint operator	162
20. Operator such that $A^*A - AA^* = I$	163
21. Expansion in series of inverse operators in a Banach space	167
22. Mellin and Fourier transforms	171
23. Fourier transform of $ t ^{-1/2}$	176
24. Fourier transform of $e^{-(1/2)t^2}$	178
25. Fourier transform of t^α and convolution product	179
VI. Series expansions of functions.	187
26. Calculation of a Fourier series expansion	187
27. Expansion in cosine series	187
28. Expansion in sine series	188
29. Convergence of a Fourier series expansion	188
30. Exponential Fourier series	189
31. Exponential Fourier series and Chebychev polynomials	193
32. Fourier expansion and Bessel functions	195
33. Differentiation of a Fourier series	196
34. Differentiation of a Fourier series	198
35. Fourier expansion on the circle—Differentiation	202
36. Dirichlet kernel	206
37. Bessel functions and Fourier transform of a function	209
38. Series expansion in Legendre polynomials	211
39. Chebychev polynomials	212
40. Laguerre polynomials	215
41. Laguerre polynomials	215
42. Hermite polynomials	219
VII. Differential equations.	221
43. Bessel equations	221
44. Rotating string	223
45. Legendre equation	225
46. Legendre equation	227
47. Rotating beam (proper values and proper functions)	231
48. Bending of a beam (Fourier series and Laplace transform)	233
49. Deformation of a beam (Fourier transform)	238
50. Volterra and Fredholm integral equations associated with a differential equation	240

51. Integral equation associated with a differential equation	244
52. Solution of a differential equation by Laplace transform	246
53. Solution of an integro-differential equation by Laplace transform	248
54. Passage of a vehicle over an obstacle over an obstacle	249
55. Exercise on the beta and gamma functions	251
56. Laplace transforms of Bessel functions	253

VIII. Partial differential equations.

	255
57. Equation of a vibrating string	258
58. Cylindrical wave equation	258
59. Study of certain distributions, solutions of the vibrating string equation	262
60. Telegrapher's equation	267
61. Oscillations of an elastic string	272
62. Laplacian in two variables	277
63. Study of $\Delta u = k^2 u$	280
64. Newtonian potential of a circumference	283
65. Electrostatic potential Legendre functions	286
66. Study with the help of distributions of $\Delta f + a^2 f = 0$	290
67. Propagation of heat in a bar	294
68. Propagation of heat in a cylinder	296
69. Propagation of heat in a cylinder and Bessel functions	299
70. Heat propagation in a circular plate	304
71. Heat conduction in a sphere	308
72. Solution by Laplace transform of the wall problem (theory of heat)	310
