INTRODUCTION	1
CHAPTER I: THE BBGKY HIERARCHY	7
1.1. Introduction.....	7
1.2. The Hamilton dynamics of a system of particles with hard core.....	9
1.2.1. <i>The Hamilton equations</i>	9
1.2.2. <i>Definition of the phase trajectories</i>	12
1.2.3. <i>Existence and some properties of the phase trajectories</i>	17
1.3. The evolution operator for a system with finite number of particles ..	21
1.3.1. <i>Definition of the evolution operator</i>	21
1.3.2. <i>Properties of the evolution operator</i>	23
1.3.3. <i>The initial value problem for the Liouville equation</i>	27
1.3.4. <i>Statistical ensembles</i>	31
1.4. The derivation of the BBGKY hierarchy	33
1.4.1. <i>The distribution functions</i>	33
1.4.2. <i>The BBGKY hierarchy of equations</i>	36
1.4.3. <i>Non-symmetrical system of particles: the BBGKY hierarchy</i>	39
1.5. The steady BBGKY hierarchy	44
1.5.1. <i>On the solutions of the steady BBGKY hierarchy</i>	44
1.5.2. <i>Equilibrium distribution functions</i>	45
1.5.3. <i>Equilibrium states of non-symmetrical systems</i>	48
1.5.4. <i>The states close to equilibrium</i>	50
Appendix I. The infinitesimal operator of the group $S^N(t)$	52
Appendix II. The formal derivation of the infinitesimal operator [BB] of the group $S^N(t)$	61
CHAPTER II: THE INITIAL VALUE PROBLEM FOR THE BBGKY HIERAR- CHY OF A SYSTEM OF A FINITE NUMBER OF PARTICLES... ..	67
2.1. Introduction.....	67
2.2. The evolution operator of the BBGKY hierarchy.....	69
2.2.1. <i>Definitions and basic result</i>	69
2.2.2. <i>Some auxiliary results</i>	71
2.2.3. <i>Properties of the BBGKY evolution operator</i>	75
2.3. Existence of solutions for BBGKY hierarchy	79
2.3.1. <i>The BBGKY hierarchy</i>	79
2.3.2. <i>The existence theorem</i>	80

2.4. Existence of solutions for a one-dimensional BBGKY hierarchy	84
2.4.1. Properties of the evolution operator	84
2.4.2. The formula for the solution of the Cauchy problem	92
2.4.3. Existence theorem	93
2.4.4. Hard rod particle system	95
2.5. The iteration series	97
2.5.1. The construction of the evolution operator for the BBGKY hierarchy by iteration	97
2.5.2. The explicit form of the iteration series	98
2.5.3. Existence of the iteration series	101
2.5.4. Existence theorem for initial data from some subspace in L^1	105
2.5.5. The iteration series for one-dimensional hard spheres system	108

CHAPTER III: THE INITIAL VALUE PROBLEM FOR L^∞ DATA: THERMODYNAMIC LIMIT 111

3.1. Introduction	111
3.2. A local existence theorem for the BBGKY hierarchy of hard spheres	112
3.2.1. Formulation of problem and existence theorem	112
3.2.2. Basic estimate	113
3.2.3. Other methods of construction of the basic estimate	120
3.2.4. The thermodynamic limit	124
3.3. Global existence theorems	126
3.3.1. The continuation of the solution in time	126
3.3.2. Global existence of a weak solution	127
3.3.3. Global solution for the BBGKY hierarchy of a one-dimensional hard sphere system	130
3.4. Method of the interaction region	135
3.4.1. Formulation of the problem	135
3.4.2. The interaction region	136
3.4.3. Basic estimate	141
3.4.4. Existence theorems and remarks	145

CHAPTER IV: THE DERIVATION OF THE BOLTZMANN EQUATION 153

4.1. Introduction: On the Boltzman-Grad limit	153
4.2. The Boltzmann-Grad limit for equilibrium states	159
4.2.1. The infinite system of hard spheres	159
4.2.2. Extension: the smooth potential	162
4.3. The Boltzmann hierarchy and the Boltzmann equation	164

4.3.1. On the Boltzmann hierarchy.....	164
4.3.2. The main result.....	167
4.3.3. On the H-function and irreversibility concept.....	167
4.4. The Boltzmann-Grad limit for solutions of initial value problem for the BBGKY hierarchy.....	172
4.4.1. Auxiliary lemmas.....	172
4.4.2. The approximating functionals.....	176
4.4.3. The Boltzmann-Grad limit for non-equilibrium states.....	181
4.5. The Boltzmann-Grad limit for equilibrium states of systems of hard spheres in the framework of the canonical ensemble.....	182
4.5.1 The existence of the Boltzmann-Grad limit for normalized equilibrium distribution functions of hard spheres in the framework of the canonical ensemble. Statement of the problem.....	182
4.5.2 The Kirkwood-Salsburg equations.....	185
4.5.3. Estimation of the value $\alpha(N, \Lambda)$	189
4.5.4. The limit of $F^{(N)}$	191
4.5.5. The Boltzmann-Grad limit for fixed domain Λ	192
4.5.6 The existence of the Boltzmann-Grad limit and thermodynamic limit for standardly normalized distribution functions on numbers of particles.....	197
4.5.7. The proof of the existence of the limits of $F^{(N)}$, $K_1^{(N)}$, $K_2^{(N)}$, $\alpha(N, \Lambda)\alpha^2$	200
4.5.8. The existence of the limit distribution functions for $Na^2/V = \alpha^2/V = \text{const}$	201
4.5.9. The proof of the existence of the limit for $F^{(N)}$ without scale transformation.....	203

CHAPTER V: ON THE DERIVATION OF KINETIC EQUATIONS FROM THE BBGKY HIERARCHY..... 205

5.1. Introduction: kinetic equations.....	205
5.2. Bogolubov's method of constructing kinetic equations.....	209
5.2.1. The special solution of the BBGKY hierarchy.....	209
5.2.2. The general form of a kinetic equation.....	214
5.2.3. Homogeneous Boltzmann equation.....	215
5.3. The non-equilibrium cluster expansions method.....	218
5.3.1. A new representation of the BBGKY hierarchy solutions.....	218
5.3.2. The initial distribution functions with factorization property.....	220
5.3.3. The comparison with Bogolubov's method.....	223
5.4. Justification of the generalized kinetic equation.....	227

5.4.1. <i>The convergence of the kinetic cluster expansion</i>	227
5.4.2. <i>An existence theorem for the generalized kinetic equation</i>	231
5.4.3. <i>The connection between the Boltzmann equation and a stochastic dynamics</i>	232
