Preface

Chapter I

Markov Processes

1.1	Classical Mechanics	1
1.2	Movement of a Particle with Noise	3
1.3	Transition Probability and the Markov Property	7
1.4	Diffusion Equations	12
1.5	Brownian Motions	16
1.6	The Itô formula	23
	Appendix. Monotone Lemmas	26

Chapter II

Time Reversal and Duality

2.1	Time Reversal of Markov Processes and Duality	27
2.2	Space-Time Markov Processes and Space-Time Duality	37
2.3	Time Reversal and Schrödinger's Representation	44

Chapter III

Non-Relativistic Quantum Theory

3.1	Non-Relativistic Equation of Motion	53
3.2	Stationary States and Eigenvalue Problem	58
3.3	Time Reversal of Diffusion Processes	62

3.4	Duality Relation of Diffusion Processes	64
3.5	Equation of Motion in General Cases	69
3.6	Principle of Superposition of Markov Processes	74
3.7	Non-Relativistic Schrödinger Equation	81
3.8	State Preparations and Measurements	85
3.9	Diffusion or Schrödinger Equations ?	93
3.10	The First Technical Convention	96

Chapter IV

Stationary Schrödinger Processes

4.1	Stationary States	105
4.2	One-Dimensional Harmonic Oscillator	106
4.3	An Example in Two-Dimension	109
4.4	Superposition of Eigenfunctions	113
4.5	Further Excited States	118
4.6	Hydrogen Atom	122

Chapter V

Construction of the Schrödinger Processes

5.1	The Feynman-Kac Formula	139
5.2	Solving the Equation of Motion	143
5.3	Transformation by Multiplicative Functionals	153
5.4	Renormalization	159
5.5	A Variational Method	162
5.6	The Maruyama-Girsanov Formula	168
5.7	A Lagrangian Formulation	175
5.8	The Second Technical Convention	179

Chapter VI

Markov Processes with Jumps

6.1	Poisson and Compound Poisson Processes	185
6.2	Poisson Random measures and Point Processes	191
6.3	Stochastic Integrals with Poisson Point Processes	194
6.4	Lévy Processes	201
6.5	Stable Processes	210
6.6	Bochner's Subordination	212
6.7	Duality of Subordinate Semi-Groups	221
6.8	Harmonic Transformation of Subordinate Semi-Groups	225
6.9	Duality of Fractional Powers of Time-Dependent Operators	228

Chapter VII

Relativistic Quantum Particles

7.1	A Relativistic Schrödinger Equation for a Spinless Particle	231
7.2	Equation of Motion for Relativistic Quantum Particles	234
7.3	Stationary States of the Relativistic Schrödinger Equation	247
7.4	Stochastic Processes for Relativistic Spinless Particles	251
7.5	Non-Relativistic Limit	257
7.6	A Diffusion Approximation	260

Chapter VIII

Stochastic Differential Equations of Pure-Jumps

8.1	Markov Processes with the Generators of Fractional Power	263
8.2	Stochastic Differential Equations of Pure-Jumps	265
8.3	The Case with no Potential Term	270
8.4	To Solve the Stochastic Differential Equations of Pure-Jumps	276
8.5	To Construct Pure-Jump Markov Processes	281
8.6	A Remark on the Integrability Condition	284

Chapter IX

Variational Principle for Relativistic Quantum Particles

9.1	Absolute Continuity	287
9.2	Pure-Jump Markov Processes	289
9.3	A Multiplicative Functional	294
9.4	Renormalization and Variational Principle	307

Chapter X

Time Dependent Subordination and Markov Processes with Jumps

10.1	Time-Inhomogeneous Subordination	315
10.2	Lemmas	319
10.3	Stochastic Differential Equation with Jumps	327
10.4	A Formula of Feynman-Kac Type	334
10.5	Markov Processes with Jumps	350
	Appendix. Integration by Parts Formulae	353

Chapter XI

Concave Majorants of Lévy Processes and the Light Cone

14.1	The Vertex Process of a Lévy Process	355
14.2	Propositions on Random walks	359
14.3	Proof of Propositions on Random Walks	361
14.4	Proof of the main Theorems	372
14.5	Examples	382
14.6	The light Cone	386

Chapter XII

The Locality in Quantum Physics

12.1	Historical Overview	389
12.2	Hidden-Variable Theories	390
12.3	Locality of Hidden-Variable Theories	399
12.4	Spin-Correlation of Three Particles	408
12.5	Gudder's Hidden-Variable Theory	417
12.6	Spin-Correlations in Gudder's Theory	421
12.7	Some Remarks	252

Chapter XIII

Micro Statistical Theory

13.1	The Source of the Noise	437
13.2	Large Deviations of the Renormalized Processes	442
13.3	The Propagation of Chaos	444
13.4	Micro Statistical Mechanics	447
13.5	Propagation of Chaos of Pure-Jump Processes	449
13.6	Superposition of Movements	451
12.7	A Remark on the Gibbs Distribution	455

Chapter XIV

Processes on Open Time Intervals

14.1	Diffusion Processes on Open Time Intervals	461
14.2	Time-Reversed Schrödinger Processes	463
14.3	A Theorem of Jeulin-Yor	470
14.4	Reflecting Brownian Motion	473
14.5	Two-Sided Skorokhod Type Problem	477
14.6	Skorokhod Problem with Singular Drift	483
14.7	The Minimum and Maximum Solutions	487
14.8	The Uniqueness and Non-Uniqueness of Solutions	489
14.9	An Application: The Origin of Universes	493

Chapter XV

Creation and Killing of Particles

15.1	Non-Linear Differential Equations	501
15.2	Branching Markov Processes	505
15.3	The Expected Number of Particles	511
15.4	Killing	517

Chapter XVI

The Itô Calculus

16.1	The Itô Integral	521
16.2	Martingales	530
16.3	The Itô Integral with Local Martingales	546
16.4	Itô's formula	553
16.5	Stochastic Differential Equations	561
16.6	Stochastic Differential Calculus	567
