Preface	ix
1 Elastic Materials and Variational Principles	1
1.1 Introduction	1
1.2 The Stress Principle and the Cauchy Theorem	2
1.3 Elastic and Hyperelastic Materials	4
1.4 Examples of Hyperelastic Materials	5
1.5 Appendix: Some Linear Algebra and Geometry	6
2 Quasi Convexity and Young Measures	9
2.1 Introduction	9
2.2 The Direct Method	10
2.3 Young Measures	12
2.4 Weak Lower Semicontinuity	16
2.5 Quasi Convexity and Gradient Young Measures	18
2.6 A General Existence Theorem	19
2.7 The Case $p = +\infty$	21
2.8 Appendix	22
3 Polyconvexity and Existence Theorems	25
3.1 Introduction	25
3.2 Polyconvexity	25
3.3 Coercivity and the Case $p < \infty$	31
3.4 Existence Theorems	32
3.5 Hyperelastic Materials	34
4 Rank-one Convexity and Microstructure	41
4.1 Introduction	41
4.2 Elastic Crystals	41
4.3 Lack of Quasi Convexity	43
4.4 Generalized Variational Principles	46
4.5 Laminates	47
4.6 The Two-Well Problem	50
4.7 Continuously Distributed Laminates	59

5	Technical Remarks	63
5.1	Introduction	63
5.2	The Existence Theorem for Young Measures	63
5.3	Biting, Weak, and Strong Convergence	67
5.4	Homogenization and Localization	70
5.5	A Remarkable Lemma	74
	Bibliographical Comments	77
	Bibliography	81
	Index	97
