<i>List of figures</i>	vii
<i>Introduction</i>	1
PART I DATABASE PRODUCTION	
1 Information Manufacturing: A Historical View of Quality Engineering <i>Stephen E. Arnold</i>	13
2 Standardizing Online Information: An Impossibility? <i>Sophie K. Hudnut</i>	31
3 Quality Issues in Information Retrieval: A Publisher Perspective <i>Anne Mintz</i>	47
4 Assuring Data Integrity and Quality: A Database Producer's Perspective <i>Earl Beutler</i>	59
5 Application of TQM to the Continuous Improvement of Database Production <i>Barbara Lawrence and Tony Lenti</i>	69
PART II ROLE OF THE SEARCH INTERMEDIARY	
6 Quality Assurance in the Information Service Environment <i>Kristin K. Oberts</i>	91
7 Better Searching Through Better Searchers <i>Barbara Quint</i>	99
PART III QUALITY TESTING	
8 Priorities of Quality <i>Carol Tenopir</i>	119
9 Testing the Quality of CD-ROM Databases <i>Peter Jacsó</i>	141

PART IV LIABILITY ISSUES

- 10** Selected Aspects of Legal Liabilities of Independent Information Professionals 171
T. R. Halvorson
- 11** Database Quality and Liability: The UK Campaign 189
Sandy Norman

PART V THE ROLE OF USER GROUPS

- 12** Evaluating the Quality of Finnish Databases 205
Ritva Juntunen
- 13** The Eye of the Beholder 221
C. J. Armstrong
- 14** Quality Issues in the Information Sector: An International Perspective with Particular Reference to the European Scene 245
Alan Gilchrist

- Index* 261

List of figures

1.1	Four stages in information manufacturing	15
1.2	A comparison of information manufacturing concepts	23
2.1	Representations of the same document in five different databases	35
2.2	Comparison of records from different databases	37
2.3	Common variations found in duplicate titles	38
2.4	Common author name variations	39
2.5	Common variations found in journal names	41
2.6	Common variations in citation information	41
2.7	Characteristic variations found in organizational names	43
5.1	NASA quality excellence award criteria summary	74
5.2	Error measurements and improvements	76
5.3	Currency (based on 100-journal survey group) – 1992	77
5.4	Interlibrary loan response time (in days)	78
5.5	Generic quality model	86
6.1	Quality Assurance in process in 3M Information Services	93
8.1	Information generation – database use chain	121
8.2	Separation of the components of a database system	121
8.3	Content is the core of quality	123
8.4	Trade and Industry ASAP: journal coverage	125
8.5	Mesh tree structure	127
8.6	Quality of life	129
8.7	Five aspects of content quality	130
8.8	Vacuums in INSPEC	131
8.9	England in International Dun's	133

8.10	Continuum of testing	136
9.1–9.29	Examples of CD-ROM database elements	143–167
13.1	Relevance matrix for SCOUG quality criteria	224
13.2	Extended version of Plutchak's matrix	236
14.1	Information chain – simplest picture	248
14.2	Information chain – added complexity	249
14.3	Standards in the supply chain – pharmaceutical industries	250
14.4	Standards in the supply chain – electronic information seller	250
14.5	Involvement in quality management	252
14.6	Conceptual model of service quality	254
14.7	Baldrige Award criteria framework – dynamic relationships	257
